

Name _____

Date _____

There are 14 mints in 1 box. Cecilia eats 2 mints each day. How many days does it take Cecilia to eat 1 box of mints? Draw and label a tape diagram to solve.

$$14 \div 2 = 7$$

It takes Cecilia 7 days to eat 1 box of mints.

NOTE: The problem above is a **quotitive** (measurement) type of division. Consider adding a second problem which would be a **partitive** type. For example ...

The are 14 mints. Cecilia divides them equally into 2 bowls. How many mints will be in each bowl?
