1. Thirty-two jelly beans are shared by 8 students.

- a. How many jelly beans will each student get?

Each student gets 4 jelly beans because  $32 \div 8 = 4$

- b. How many jelly beans will 4 students get?

4 students will get a total of 16 jelly beans because  $4 \times 4 = 16$ .

2. The teacher has 30 apple slices and 20 pear slices. Five children equally share all of the fruit slices. How many fruit slices does each child get?

Each child will get 6 apple slices and 4 pear slices for a total of 10 fruit slices.
