## CALCULUS: Graphical, Numerical, Algebraic by Finney, Demana, Watts and Kennedy Chapter 9: Error and Series

What you'll Learn About How to find the error for a series that alternates Give the first term of the series for  $f(x) = \arctan(x)$  centered at x = 0Find the approximation for P(.1) =Find (1) = arctan(1) = .0996686525 How accurate is the approximation. 0003313475

What is the value of the next term of the next.  $\frac{\chi^{3}}{2} = -.1^{3} = -.0003333333$ Give the first 2 terms of the series for  $f(x) = \arctan(x)$  centered at x = 0Find the approximation for P(.1) = 099666666  $X - X^3$ Find the f(.1) = .0996686525 How accurate is the approximation. . DOOOD | 9858 What is the value of the next term of the polynomial at x = .1-> = - = (.000002 Give the first 3 terms of the series for  $f(x) = \arctan(x)$  centered at Find the approximation for P(.1) = .0 9966 8667 Find the f(.1) = .09 96686525 3. How accurate is the approximation. .0000000 14175505 What is the value of the next term of the polynomial at x = .1- -1 = -.0000000 142857143

1. Give the first 4 terms of the series for 
$$f(x) = \arctan(x)$$
 centered at  $x = 0$ 

$$x - \frac{x^3}{3} + \frac{x^5}{5} - \frac{x^7}{7}$$

Actual 
$$\leq Error Bound$$

Difference

Proof Bound

Proof bound

One of the service of the service

1. Give the first 4 terms of the series for 
$$f(x) = \sin(x)$$
 centered at  $x = \frac{\pi}{2}$ 

$$t = (x) = \cos x + \sin x = 0$$

$$t = (x) = \cos x + \sin x = 0$$

$$t = (x) = \cos x + \sin (\frac{\pi}{2}) = 0$$

$$t = (x) = \cos x + \cos x + \cos (\frac{\pi}{2}) = 0$$

$$t = (x) = \sin x + \cos x + \cos (\frac{\pi}{2}) = 0$$

$$t = (x) = \sin x + \cos x + \cos (\frac{\pi}{2}) = 0$$

$$f''(x) = cosx + (2) = 0$$

$$(x) = \sin x + (\sin x) = 0$$

2. Use the alternate estimation theorem to determine the error bound at 
$$x = 1.6$$
  $|f(x) - P(x)| \le R$ 

$$P_{6}(x-\frac{\pi}{2}) = 1 - \frac{1(x-2)^{2}}{2!} + \frac{1(x-\frac{\pi}{2})^{4}}{4!} - \frac{1(x-\frac{\pi}{2})^{4}}{6!}$$

next term =  $\frac{(x-\frac{\pi}{2})^{8}}{8!}$ 

Uext fru = 
$$(x-\frac{5}{4})$$

error bound = 
$$\left(\frac{1.6 - \frac{11}{2}}{81}\right)$$

1. 
$$f(x) = \frac{1}{x} \text{ centered at } x = 2$$
a. Given the function, find the fourth order polynomial
$$f(x) = \frac{1}{x} = x^{-1} \qquad f(x) = \frac{1}{1}. \qquad f^{4}(x) = 34x^{-5} = \frac{14}{x^{5}}$$

$$f'(x) = -x^{-2} = -\frac{1}{x^{2}} \qquad f^{4}(x) = 2^{-1} + \frac{1}{x^{4}} \qquad f^{4}(x) = \frac{24}{32}$$

$$f''(x) = 2x^{-3} = \frac{2}{x^{3}} \qquad f^{4}(x) = \frac{2}{x^{4}} \qquad f^{5}(x) = -120 \qquad f^{4}(x) = -6x^{4} = -6x^{4} = -6x^{4} = f^{4}(x) = -6x^{4} = -6x^{4} = -6x^{4} = f^{4}(x) = -6x^{4} = -6x^{4} = f^{4}(x) = -6x^{4} = f^{4}(x) = f^$$

## Summary of Error Bound

For an Alternating Series - Use the next term

For a series that is Not Alternating

- 1. Write down the formula for the next derivative.
- 2. Find the value of the next derivative at the ends of the interval and the center.
- 3. Whichever value is bigger is the value you use to build your error bound term
