By Hunter Chen

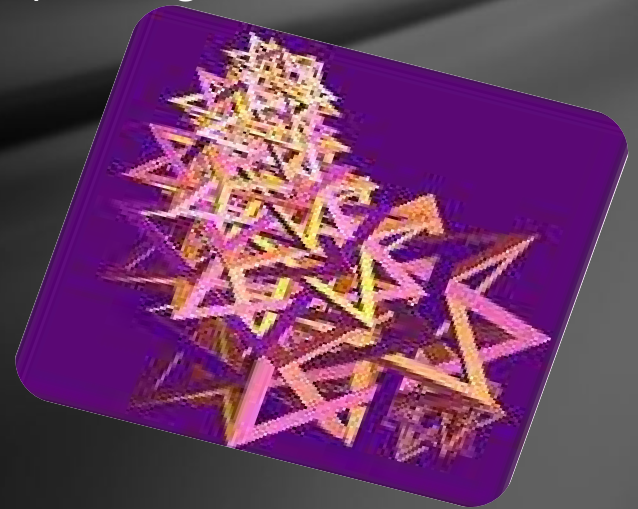

Triangles in Human Art

Triangles can be used to draw many different body parts such as the nose. Many different cultures use triangles in their art a lot. The natives also used triangles in their cave paintings, mainly for bodies.

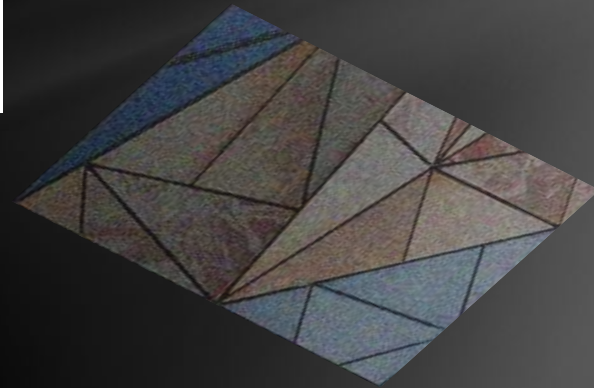

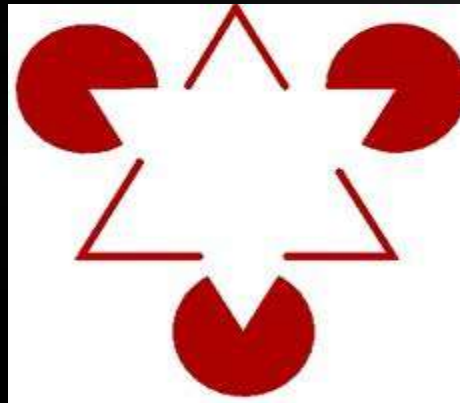

Triangles in Modern Art

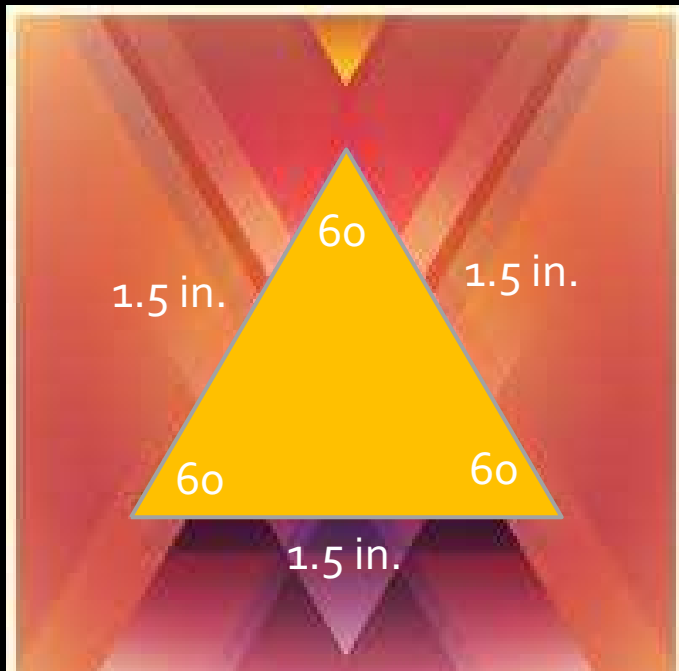

Triangles are still used in modern art. Albanian artist Edi Muka designed a piece of art that looks like a building made of triangles. Many pieces of modern art not just paintings but, buildings, sculptures, and sketches. Some art doesn't include triangles but include quadrilaterals. They are the most common among modern art with shapes. These shapes are placed beside each other and overlap each other to create an abstract painting.
