

BRIDGES 3RD GRADE

UNIT 3

Student Notebook/Journal Pages

TEACHER NOTES:

- This file contains student notebook pages for Bridges Grade 3 Math, Unit 3.
- These pages were designed to help differentiate based on student needs and allow students to go back and review key concepts.
- These pages are made to fit in any size notebook (composition or spiral). Simply cut on the dotted line and glue on necessary pages inside notebook.

Note: If you want to fit the whole page on a single notebook page, you will need to either print 2 copies per page OR scale the page down to 80%.

Fonts Used:

Headings: **AG ADULTISH**

Definitions: AG Lazy Level Expert Bold

TEACHER NOTES:

For the Problem String Pages and Word Problems, there are TWO versions.

- Version 1: Problem string pictures/equations are already featured on student page.
- Version 2: Problem string pictures/equations are blank. Students would copy equations or only show work on their student page.

THREE DIGIT ADDITION STORY PROBLEMS

1. Ashley and Alex collected soda cans to recycle. Ashley had 275 cans and Alex had 168 cans. How many cans did they have in all?

2. Dakota and Marcus are raising money to donate to their local animal shelter. Dakota raised \$297 and Marcus raised \$325. How much money did they raise in all?

3. Miranda loves to collect pennies in her special penny jar. She had 712 pennies in the jar, and her grandma just gave her 189 more. How many pennies does she have in all?

SAME DIFFERENCE PROBLEMS

1. The Jaguars scored 343 points in the basketball tournament. My team has only scored 198 points so far. How many more points does my team have to score to tie the Jaguars?

2. Martha has saved \$304. She wants to buy a bike for \$423. How much more money does she need to save to buy the bike?

3. Jin is traveling to Denver with his family. It is 582 miles from his family's house to Denver. They have driven 218 miles so far. Jin asked his mom, "How much farther?" How many more miles do they need to drive to get to Denver?

SUBTRACTION ON A NUMBER LINE

1. The third graders are selling raffles tickets for the school carnival. Matt has sold 52 tickets. Briana has sold 87 tickets. How many more raffle tickets has Briana sold than Matt?

- a. Equations: _____
- b. Estimate your answer mentally.
- c. Think about the number line subtraction strategy that might be best to solve this problem.

2. Carter wanted to weigh his puppy, but the pully wouldn't stand still on the scale. So Carter weighed himself. He weighed 59 pounds. Then he picked up the puppy and stood on the scale. Together they weigh 85 pounds. How much did the puppy weigh?

3. Jasmine read three chapters of her adventure book in one night, and now she is on page 204. The adventure book has 590 pages. How many more pages does Jasmine need to read to finish the book?

4. Cedric and Willie are collecting game store tokens. Cedric has 295 tokens, and Willie has 523 tokens. Who has more tokens? How many more does he have?

THREE- DIGIT PROBLEMS

1. The Scouts are collecting canned food to donate to the Food Bank in their town. Last Saturday, they collected 175 cans. This Saturday, they collected 168 cans. How many cans have they collected in all?

Choose and solve one or more of the problems below.

2. The third graders did a play last week. They did one show for the other kids in the school, and one show for their families. 238 people came to the first show. 154 people came to the second show. How many people in all watched the show.

3. There are 137 kindergartners, 139 first graders, and 153 second graders at Wood Primary School. How many students are there in all?

4. Add.

$$\begin{array}{r} 329 \\ + 217 \\ \hline \end{array}$$
$$\begin{array}{r} 258 \\ + 171 \\ \hline \end{array}$$

THREE- DIGIT PROBLEMS

THREE-DIGIT PROBLEMS

WHICH ADDITION STRATEGIES WORK BEST?

- You don't have to use the same strategy all the time
- Look at the numbers first to see which strategy might work best
- Look for times when you can take some from one of the numbers and give it to the other number to make the problem easier
- If you don't have to regroup, the traditional algorithm is fast and easy – just line the numbers up and add
- The standard algorithm always works, so it's good if you don't think of an easier strategy
-

MORE THREE-DIGIT PROBLEMS

1. Lexi's book has 327 pages. She has read 118 pages so far. How many pages does she have left to read?

Choose and solve one or more of the problems below.

2. King School is having a Read-a-Thon. The kids in Mr. Bell's class set a goal of 350 books. They still have to read 184 books to reach their goal. How many books have they read do far?

3. There are 123 books on the shelf. Some kids got books off the shelf to read. Now there are 778 books on the shelf. How many books did the kids take?

4. Subtract.

$$\begin{array}{r} 333 \\ - 218 \\ \hline \end{array}$$
$$\begin{array}{r} 239 \\ - 171 \\ \hline \end{array}$$
$$\begin{array}{r} 304 \\ - 165 \\ \hline \end{array}$$
