## Chapter Preview Questions

1. A solution is an example of a
  - a. homogeneous colloid.
  - b. heterogeneous colloid.
  - c. homogeneous mixture.
  - d. heterogeneous mixture.

## Chapter Preview Questions

1. A solution is an example of a
  - a. homogeneous colloid.
  - b. heterogeneous colloid.
  -  c. **homogeneous mixture.**
  - d. heterogeneous mixture.

## Chapter Preview Questions

2. Magnesium sulfide and aluminum fluoride are
- ionic compounds.
  - molecular compounds.
  - covalent electrons.
  - radioactive elements.

## Chapter Preview Questions

2. Magnesium sulfide and aluminum fluoride are
- a. ionic compounds.
  -  **b. molecular compounds.**
  - c. covalent electrons.
  - d. radioactive elements.

## Chapter Preview Questions

3. When dissolved in water, ionic compounds
  - a. conduct electricity.
  - b. make the water cloudy.
  - c. form double and triple bonds.
  - d. do not conduct electricity.

## Chapter Preview Questions

3. When dissolved in water, ionic compounds
-  **a. conduct electricity.**
  - b. make the water cloudy.
  - c. form double and triple bonds.
  - d. do not conduct electricity.

## Chapter Preview Questions

4. When dissolved in water, molecular compounds
- conduct electricity.
  - make the water cloudy.
  - form double and triple bonds.
  - do not conduct electricity.

## Chapter Preview Questions

4. When dissolved in water, molecular compounds
- a. conduct electricity.
  - b. make the water cloudy.
  - c. form double and triple bonds.
  - ✓ **d. do not conduct electricity.**

# Chapter 7 Acids, Bases, and Solutions

## Focus on the **BIG Idea**

**What are some characteristics of acids and bases?**

Suppose you dissolve a teaspoon of salt in a glass of water. Is it possible to recover the salt from the water? Explain.

## Build Science Vocabulary

### Use Related Words

Verb	Noun	Adjective
<b>indicate</b> To show; to point to	<b>indicator</b> Something that shows or points to	<b>indicative</b> Serving as a sign; showing

## Build Science Vocabulary

### Use Related Words

Verb	Noun	Adjective
<b>saturate</b> To fill up as much as is possible	<b>saturation</b> The condition of holding as much as is possible	<b>saturated</b> To be full; to hold as much as is possible

## Build Science Vocabulary

### Use Related Words

Verb	Noun	Adjective
<b>suspend</b> To hang so as to allow free movement	<b>suspension</b> The condition of hanging or moving freely	<b>suspended</b> Hanging so as to allow free movement

## Build Science Vocabulary

### Apply It!

Review the words related to saturate. Complete the following sentences with the correct form of the word.

1. The \_\_\_\_\_ sponge could hold no more water.

saturated

2. He continued to add water to the point of \_\_\_\_\_.

saturation

# Section 1: Understanding Solutions

-  What are the characteristics of solutions, colloids, and suspensions?
-  What happens to the particles of a solute when a solution forms?
-  How do solutes affect the freezing point and boiling point of a solvent?

## What Is a Solution?

A solution has the same properties throughout. It contains solute particles (molecules or ions) that are too small to see.

Examples of Common Solutions		
Solute	Solvent	Solution
Gas	Gas	Air (oxygen and other gases in nitrogen)
Gas	Liquid	Soda water (carbon dioxide in water)
Liquid	Liquid	Antifreeze (ethylene glycol in water)
Solid	Liquid	Dental filling (silver in mercury)
Solid	Liquid	Ocean water (sodium chloride and other compounds in water)
Solid	Solid	Stainless steel (chromium, nickel, and carbon in iron)

## What Is a Solution?

Solutions can be formed from any combination of solids, liquids, and gases.

End of Slide

MENU

## Colloids and Suspensions

Colloids and suspensions are mixtures that have different properties than solutions.

**Solution**  
In a solution of glass cleaner, particles are uniformly distributed and too small to scatter light.

**Colloid**  
Fats and proteins in milk form globular particles that are big enough to scatter light, but are too small to be seen.

**Suspension**  
Suspended particles of "snow" in water are easy to see.

End of Slide

## Particles in a Solution

When a solution forms, particles of the solvent surround and separate the particles of the solute.

# Section 2: Concentration and Solubility

-  How is concentration measured?
-  Why is solubility useful in identifying substances?
-  What factors affect the solubility of a substance?

## Calculating a Concentration

To calculate the concentration of a solution, compare the amount of solute to the amount of solution and multiply by 100 percent.

For example, if a solution contains 10 grams of solute dissolved in 100 grams of solution, then its concentration can be reported as 10 percent.

$$\frac{10 \text{ g}}{100 \text{ g}} \times 100\% = 10\%$$

## Calculating a Concentration

### Practice Problem

**Q.** A solution contains 12 grams of solute dissolved in 36 grams of solution. What is the concentration of the solution?

**A.** 33%

## Solubility

Solubility is a measure of how much solute can dissolve in a solvent at a given temperature.

### Solubility in 100 g of Water at 0°C

Compound	Solubility (g)
*Carbon dioxide (CO <sub>2</sub> )	0.335
Baking soda (NaHCO <sub>3</sub> )	6.9
Table salt (NaCl)	35.7
Table sugar (C <sub>12</sub> H <sub>22</sub> O <sub>11</sub> )	180

\*CO<sub>2</sub> at 101 kPa total pressure

## Temperature and Solubility

Solubility of  $\text{KNO}_3$

The solubility of the compound potassium nitrate ( $\text{KNO}_3$ ) varies in water at different temperatures.

## Temperature and Solubility

Solubility of  $\text{KNO}_3$

### Reading Graphs:

Q.

At which temperature shown in the graph is  $\text{KNO}_3$  least soluble in water?

A.

$\text{KNO}_3$  is least soluble at  $0^\circ\text{C}$ .

End of Slide

## Temperature and Solubility

Solubility of  $\text{KNO}_3$

### Reading Graphs:

Q.

Approximately what mass of  $\text{KNO}_3$  is needed to saturate a water solution at  $40^{\circ}\text{C}$ ?

A.

Approximately 65 g of  $\text{KNO}_3$  are needed to saturate a water solution at  $40^{\circ}\text{C}$ .

End of Slide

## Temperature and Solubility

Solubility of  $\text{KNO}_3$

### Calculating:

Q.

About how much more soluble is  $\text{KNO}_3$  at  $40^\circ\text{C}$  than at  $20^\circ\text{C}$ ?

A.

$\text{KNO}_3$  is about twice as soluble at  $40^\circ\text{C}$  as it is at  $20^\circ\text{C}$ .

End of Slide

## Temperature and Solubility

Solubility of  $\text{KNO}_3$

### Interpreting Data:

Q.

Does solubility increase at the same rate with every  $20^\circ\text{C}$  increase in temperature? Explain.

A.

No; the curve shows that solubility increases more with each  $20^\circ\text{C}$  increase in temperature.

# Section 3: Describing Acids and Bases

- 🔑 What are the properties of acids and bases?
- 🔑 Where are acids and bases commonly used?

## Properties of Acids and Bases

Litmus is an example of an indicator, a compound that changes color when in contact with an acid or a base.

End of Slide

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

**Acids in the Home**  
People often use dilute solutions of acids to clean brick and other surfaces. Hardware stores sell muriatic (hydrochloric) acid, which is used to clean bricks and metals.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

### Acids and Food

Many of the vitamins in the foods you eat are acids.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

### Acids and Food

Many of the vitamins in the foods you eat are acids.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

### Acids and Food

Many of the vitamins in the foods you eat are acids.

Tomatoes and oranges contain ascorbic acid, or vitamin C.

Folic acid, needed for healthy cell growth, is found in green leafy vegetables.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

Nitric acid and phosphoric acid are used to make fertilizers for crops and lawns.

**Acids and Industry**  
Farmers and manufacturers depend on acids for many uses.

Sulfuric acid reacts with lead and lead sulfate in a battery to produce an electric current.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

### Bases and Industry

Mortar and cement are manufactured using the bases calcium oxide and calcium hydroxide.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

### Bases in the Home

Ammonia solutions are safe to spray with bare hands, but you must wear gloves when working with drain cleaners.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

### Bases in the Home

Ammonia solutions are safe to spray with bare hands, but you must wear gloves when working with drain cleaners.

Drain cleaners contain sodium hydroxide (lye).

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

### Bases in the Home

Ammonia solutions are safe to spray with bare hands, but you must wear gloves when working with drain cleaners.

Drain cleaners contain sodium hydroxide (lye).

You can't mistake the odor of household cleaning products made with ammonia.

## Uses of Acids and Bases

Acids and bases have many uses around the home and in industry.

### Bases and Food

Baking soda reacts with acids such as lemon juice and buttermilk to produce carbon dioxide gas in baked goods. Without these gas bubbles, breads, biscuits, cakes, and cookies would not be light and fluffy.

# Section 4: Acids and Bases in Solution

-  What kinds of ions do acids and bases form in water?
-  What does pH tell you about a solution?
-  What happens in a neutralization reaction?

## Acids and Bases in Solution

The table lists some commonly encountered acids and bases.

Important Acids and Bases			
Acid	Formula	Base	Formula
Hydrochloric acid	HCl	Sodium hydroxide	NaOH
Nitric acid	HNO <sub>3</sub>	Potassium hydroxide	KOH
Sulfuric acid	H <sub>2</sub> SO <sub>4</sub>	Calcium hydroxide	Ca(OH) <sub>2</sub>
Carbonic acid	H <sub>2</sub> CO <sub>3</sub>	Aluminum hydroxide	Al(OH) <sub>3</sub>
Acetic acid	HC <sub>2</sub> H <sub>3</sub> O <sub>2</sub>	Ammonia	NH <sub>3</sub>
Phosphoric acid	H <sub>3</sub> PO <sub>4</sub>	Calcium oxide	CaO

## Strength of Acids and Bases

Strong acids and weak acids act differently in water. Hydrochloric acid is a strong acid. Acetic acid is a weak acid.

Strong Acid

In a solution of a strong acid, all the acid molecules break up into ions.

Weak Acid

In a solution of a weak acid, fewer molecules break up into ions.

### Key

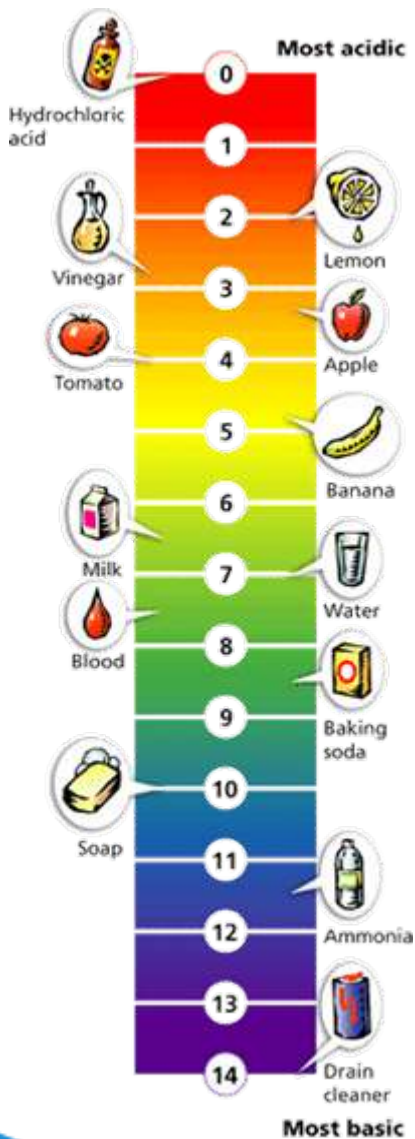

-  Chloride ion ( $\text{Cl}^-$ )
-  Hydrogen ion ( $\text{H}^+$ )
-  Acetic acid ( $\text{HC}_2\text{H}_3\text{O}_2$ )
-  Acetate ion ( $\text{C}_2\text{H}_3\text{O}_2^-$ )

End of Slide

## The pH Scale

A low pH indicates that the concentration of hydrogen ions is big. In contrast, a high pH indicates that the concentration of hydrogen ions is low.

## Acid-Base Reactions

In a neutralization reaction, an acid reacts with a base to produce a salt and water.

End of Slide

## Acid-Base Reactions

Common Salts	
Salt	Uses
Sodium chloride NaCl	Food flavoring; food preservative
Potassium iodide KI	Additive in "iodized" salt that prevents iodine deficiency
Calcium chloride CaCl <sub>2</sub>	De-icer for roads and walkways
Potassium chloride KCl	Salt substitute in foods
Calcium carbonate CaCO <sub>3</sub>	Found in limestone and seashells
Ammonium nitrate NH <sub>4</sub> NO <sub>3</sub>	Fertilizer; active ingredient in cold packs

Each salt listed in this table can be formed by the reaction between an acid and a base.
