Assignment Week #: 4

1. What was your biggest take away from the Ocean Acidification article? The Coronavirus article?
2. From this week's assignments, describe a cause and effect (feedback loop) that humans have had on the environment.
3. What is your current personal opinion on climate change?
4. What are you currently doing that would have a positive effect on the environment?
5. What are you going to do in the future to have a positive effect on the environment?

Please answer the following questions about this week:

- 1) How long did you spend working only on chemistry this week? Be honest.
- 2) What is something new you learned in chemistry class this week?
- 3) Was there anything difficult about it? Explain.
- 4) How is chemistry class this week related to something outside of chemistry class? Another class or an experience from your life?
- 5) What is a question you have based on chemistry class this week? Something you are curious about or wonder about, not something you were supposed to learn/do but didn't.
- 6) How are you doing this week?
