EXHIBIT A:

School Facilities Capacity Calculation

EXECUTIVE SUMMARY

This Residential and Commercial/Industrial Development School Fee Justification Study ("Study") is intended to determine the extent to which a nexus can be established in the Bonita Unified School District ("School District") between residential and commercial/industrial development ("CID") and (i) the need for school facilities, (ii) the cost of school facilities, and (iii) the amount of statutory school fees ("School Fees") per residential and CID building square foot that may be levied for schools pursuant to the provisions of Section 17620 of the Education Code, as well as Sections 65995 and 66001 of the Government Code, Assembly Bill ("AB") 181, and subdivision (e) of Section 17621 of the Education Code.

The School District provides education to students in grades transitional kindergarten ("TK") through 12 residing within portions of the Cities of Glendora, La Verne, Pomona, and San Dimas (collectively, "Cities") and a portion of the unincorporated County of Los Angeles ("County") (please see map on following page for a geographic profile of the School District). Collectively, the School District's school facilities in school year 2021/2022 have a capacity of 10,128 students based on classroom utilization information provided by the School District, of which 4,278 are at the elementary school level (i.e., grades TK through 5), 2,310 are at the middle school level (i.e., grades 6 through 8), and 3,540 are at the high school level (i.e., grades 9 through 12) (see Exhibit A for the school facilities capacity calculation). Based on data provided by the School District, student enrollment is 9,599 in school year 2021/2022. Comparing student enrollment to facilities capacity reveals that facilities capacity exceeds student enrollment at all school levels while in school year 2021/2022 (please see Section IV for more information on student enrollment and facilities capacity).

To establish a nexus and a justifiable residential School Fee level, the Study evaluated the number and cost of new facilities required to house students generated from future residential development within the School District. Based on data provided by the Southern California Association of Governments ("SCAG") approximately 3,076 additional residential units are expected to be constructed within the School District's boundaries through calendar year 2035 ("Future Units"). Of these 3,076 Future Units, 193 are expected to be single family detached ("SFD") and 2,883 are expected to be multi-family attached ("MFA") units.

April 2022

To determine the impact on the School District from Future Units, the Study first multiplied the number of Future Units by the student generation factors ("SGFs") calculated by Cooperative Strategies, to determine the projected student enrollment from Future Units. The results were that 429 unhoused elementary school students, 102 unhoused middle school students, and 14 unhoused high school students are anticipated to be generated from Future Units. These numbers include a reduction of the number of students projected to be housed by existing excess seats ("Projected Unhoused Students").

To adequately house the Projected Unhoused Students, the School District will need to expand existing elementary, middle, and high school facilities. Using design capacities of 25 students per classroom at the elementary school level, 27 students per classroom at the middle school level, and 27 students per classroom at the high school level, the School District will need to construct 18 new elementary school classrooms, four (4) new middle school classrooms, and one (1) new high school classroom to accommodate the Projected Unhoused Students from the Future Units projected to be constructed at this time. Based on school facility costs experienced by other school districts in the County, Cooperative Strategies estimates the cost of a new school classroom to be \$1,035,000. Additionally, the School District will also need to reconstruct and modernize its existing elementary school, middle school, and high school facilities. Based on modernization costs provided in the School District's 2021 Master Plan, Cooperative Strategies estimates a modernization cost \$42,383 per elementary school seat, \$36,049 per middle school seat, and \$37,422 per high school seat.

In addition to the school facilities cost impacts, the School District will experience Central Administrative and Support Facilities cost impacts. In January 1994, the State Allocation Board ("SAB") approved a policy of four (4) square feet of Central Administrative and Support Facilities per student, which based on School District cost estimates equates to a per-student cost of \$800. Multiplying these costs by the facilities needed and the students generated yielded the total school facilities cost impacts shown in Table ES-1.

TABLE ES - 1

**TOTAL SCHOOL FACILITIES COST IMPACTS FROM
FUTURE UNITS (2022\$)**

| School Levels | Cost Per Teaching Station/Student | Teaching Stations Required/Students Generated | Total School Facilities Cost Impacts |
|------------------------------|--|--|---|
| Elementary School | \$1,035,000 | 17.1600 | \$17,760,600 |
| Middle School | \$1,035,000 | 3.7778 | \$3,910,023 |
| High School | \$1,035,000 | 0.5185 | \$536,648 |
| Central Admin Impacts | \$800 | 545 | \$436,000 |
| ES Modernization | \$42,383 | 0 | \$0 |
| MS Modernization | \$36,049 | 106 | \$3,821,194 |
| HS Modernization | \$37,422 | 284 | \$10,627,848 |
| Total | N/A | N/A | \$37,092,313 |

The amounts listed in Table ES-1 were apportioned to each land use class based on the number of students generated from such residential land use. Thereafter, the school facilities cost impacts for each land use class were divided by the number of Future Units to calculate the school facilities cost impacts per residential unit. Table ES-2 below lists the school facilities cost impacts per residential unit.

TABLE ES - 2

SCHOOL FACILITIES COST IMPACTS PER RESIDENTIAL UNIT (2022\$)

| Land Use | Total School Facilities Cost Impacts | Future Units | School Facilities Cost Impacts per Residential Unit |
|-------------------------------|---|---------------------|--|
| Single Family Detached | \$3,164,374 | 193 | \$16,396 |
| Multi-Family Attached | \$33,927,939 | 2,883 | \$11,768 |

To determine the school facilities cost impacts per square foot of residential construction, the school facilities cost impacts per unit were divided by the average square footage of a residential unit in each land use class. Table ES-3 on the following page lists the school facilities cost impacts per average residential square foot.

T A B L E E S - 3

**SCHOOL FACILITIES COST IMPACTS PER RESIDENTIAL SQUARE FOOT
(2022\$)**

| Land Use | School Facilities Cost Impacts per Future Units | Average Square Footage | School Facilities Cost Impacts per Residential Square Foot |
|-------------------------------|--|-------------------------------|---|
| Single Family Detached | \$16,396 | 3,000 | \$5.47 |
| Multi-Family Attached | \$11,768 | 1,750 | \$6.72 |

To determine the commercial/industrial School Fee levels that satisfy the rigorous nexus requirements of AB 181, the Study divides CID into seven (7) land use categories: retail and services, office, research and development, industrial/warehouse/ manufacturing, hospital, hotel/motel, and self-storage. The employment impacts of each of these land uses, in terms of the number of employees per 1,000 square feet of building space, are based on information from the San Diego Association of Governments ("SANDAG") pursuant to Section 17621 (e)(1)(B) of the Education Code. These employee impacts are shown in Table ES-4.

T A B L E E S - 4

EMPLOYMENT IMPACTS PER 1,000 SQUARE FEET CID

| CID Land Use Category | Square Feet per Employee | Employees per 1,000 Square Feet |
|---|---------------------------------|--|
| Retail and Service | 447 | 2.2371 |
| Office | 286 | 3.4965 |
| Research and Development | 329 | 3.0395 |
| Industrial/Warehouse/Manufacturing | 371 | 2.6954 |
| Hospital | 360 | 2.7778 |
| Hotel/Motel | 883 | 1.1325 |
| Self-Storage | 15,552 | 0.0643 |

Additional data from SCAG, the U.S. Bureau of Census ("Census"), and CoreLogic provide a basis for estimating net school district household impacts. This number includes only those households occupying new housing units within the School District, as opposed to existing units whose previous occupants may have included school-aged children. Multiplying net school district households by (i) the number of students per household and (ii) total school facilities costs per student, results in estimates of school facilities cost impacts. Collectively, this calculation represents the total school facilities cost impacts per 1,000 square feet of commercial/industrial floor space, expressed in 2022 dollars. These results are summarized in Table ES-5.

T A B L E E S - 5

**GROSS SCHOOL FACILITIES COSTS IMPACTS
PER HOUSEHOLD (2022\$)**

| School Level | Total Student Generation Impacts | Cost per Student | Gross School Facilities Costs Impacts per Unit |
|-----------------------------|----------------------------------|------------------|--|
| Elementary School | 0.0294 | \$42,200 | \$1,240.68 |
| Middle School | 0.0176 | \$37,562 | \$661.09 |
| High School | 0.0301 | \$37,502 | \$1,128.81 |
| Impact per Household | N/A | N/A | \$3,030.58 |

The revenue component of the Study estimates the potential fee revenues generated by CID, including residential fees paid by CID related households, as well as CID School Fees. CID related residential revenues are calculated based on proposed residential School Fee of \$4.79 per square foot, justified in this study. The residential revenues per household are then subtracted from the impact per household listed above. This results in net impact per household, as summarized in Table ES-6.

T A B L E E S - 6

**NET SCHOOL FACILITIES COST IMPACTS
PER HOUSEHOLD (2022\$)**

| Item | Amount |
|---|-------------------|
| Impact per Household | \$3,030.58 |
| Residential Revenue Per Household | \$53.41 |
| Net School Facilities Cost Impacts Per Household | \$2,977.17 |

The net impact per household is then divided by the appropriate square feet per employee for each of the seven (7) CID land use categories to determine the cost impact per square foot of CID for each CID category, as shown in Table ES-7.

T A B L E E S - 7

SCHOOL FACILITIES COST IMPACTS PER SQUARE FOOT (2022\$)

| School Level | Net Impact per Household | Square Feet per Employee | Cost Impact per Square Foot Of CID |
|---|---------------------------------|---------------------------------|---|
| Retail and Services | \$2,977.17 | 447 | \$6.660 |
| Office | \$2,977.17 | 286 | \$10.410 |
| Research and Development | \$2,977.17 | 329 | \$9.049 |
| Industrial/Warehouse/Manufacturing | \$2,977.17 | 371 | \$8.025 |
| Hospital | \$2,977.17 | 360 | \$8.270 |
| Hotel/Motel | \$2,977.17 | 883 | \$3.372 |
| Self-Storage | \$2,977.17 | 15,552 | \$0.191 |

On February 23, 2022, the SAB increased the maximum Residential and CID School Fees authorized by Section 17620 of the Education Code from \$4.08 to \$4.79 per residential building square foot, and from \$0.66 to \$0.78 per CID square foot for unified school districts.

As shown in Table ES-3, the impact per residential square foot does not exceed the maximum SFD residential School Fee per square foot and exceeds the maximum MFA residential School Fee per square foot, therefore, the Study concludes that the School District is fully justified in levying the maximum School Fee of \$4.79 per square foot for all residential development within its boundaries subject to the limitations under the law.

Justification of the CID School Fee is based on a comparison of cost impacts per CID square foot, as shown in Table ES-7, against the maximum CID Fee per square foot as noted above. As shown in Table ES-8, the School District is justified in levying:

T A B L E E S - 8

MAXIMUM SCHOOL FEE PER SQUARE FOOT OF CID

| CID Land Use Category | Maximum School Fee |
|---|---------------------------|
| Retail and Service | \$0.780 |
| Office | \$0.780 |
| Research and Development | \$0.780 |
| Industrial/Warehouse/Manufacturing | \$0.780 |
| Hospitals | \$0.780 |
| Hotel/Motel | \$0.780 |
| Self-Storage | \$0.191 |

I. INTRODUCTION

Senate Bill ("SB") 50, which Governor Wilson signed on August 27, 1998, was enacted on November 4, 1998, following the approval of Proposition 1A by the voters of the State in the general election on November 3, 1998. SB 50 includes provisions for the following:

1. Issuance of State general obligation bonds in an amount not to exceed \$9.2 billion;
2. Reformation of the State School Building Program; and
3. Reformation of the School Fee mitigation payment collection procedure.

Additionally, Assembly Bill ("AB") 16, which Governor Davis signed on April 26, 2002, was enacted following the approval of Proposition 47 ("Prop 47") by the voters of the State in the general election on November 5, 2002. Prop 47 includes the authorization for issuance of State general obligation bonds in the amount of \$13.05 billion, and AB 16 provides for additional reformation of the State School Building Program into the School Facilities Program. On March 2, 2004, the voters of the State approved Proposition 55 ("Prop 55"). Prop 55 includes the authorization for the additional issuance of State general obligation bonds in the amount of \$12.3 billion. Finally AB 127, which Governor Schwarzenegger signed on May 20, 2006, was enacted following the approval of Proposition 1D ("Prop 1D") by the voters of the State in the general election of November 7, 2006. Prop 1D includes the authorization for the issuance of State general obligation bonds in the amount of \$10.4 billion. On November 8, 2016, the voters of the State approved Proposition 51 ("Prop 51"). Prop 51 includes the authorization for the issuance of State general obligation bonds in the amount of \$9 billion.

The Mira-Hart-Murrieta Decisions, which formerly permitted school districts to seek mitigation payments in excess of School Fees under certain circumstances, are suspended by AB 127. In lieu of the powers granted by the Mira-Hart-Murrieta Decisions, SB 50 and subsequent legislation provide school districts with an alternative School Fee collection procedure that, subject to certain conditions, authorizes school districts to collect Alternative Fees on residential developments. However, not all school districts will qualify to charge Alternative Fees.

Therefore, school districts must still rely on School Fees as a funding source for school facilities required by new development. However, before a school district can levy School Fees on new development, State law requires that certain nexus findings must be made and documented. The objective of this Study is to provide a rigorous basis for such findings.

II. LEGISLATION

State legislation, specifically AB 2926 and AB 1600, provides guidelines, procedures, and restrictions on the levy of School Fees for school facilities. Certain provisions of this legislation and history are summarized below:

A. AB 2926

AB 2926 was enacted by the State in 1986. Among other things, AB 2926 added various sections to the Government Code which authorize school districts to levy School Fees on new residential and commercial/industrial developments in order to pay for school facilities. In addition, AB 2926 provides for the following:

1. No city or county can issue a building permit for a development project unless such School Fees have been paid.
2. School Fees for commercial/industrial development must be supported by the finding that such School Fees "are reasonably related and limited to the needs for schools caused by the development."
3. School Fees for 1987 were limited to \$1.50 per square foot on new residential construction and \$0.25 per square foot for new commercial/industrial construction.
4. Every year, School Fees are subject to annual increases based on the Statewide cost index for Class B construction, as determined by the SAB at its January meeting (This provision was changed to every other year by AB181).

The provisions of AB 2926 have since been expanded and revised by AB 1600.

B. AB 1600

AB 1600, which created Sections 66000 et seq. of the Government Code, was enacted by the State in 1987. AB 1600 requires that all public agencies satisfy the following requirements when establishing, increasing or imposing a fee as a condition of approval for a development project.

1. Determine the purpose of the fee.
2. Identify the facilities to which the fee will be put.

3. Determine that there is a reasonable relationship between the need for public facilities and the type of development on which a fee is imposed.
4. Determine that there is a reasonable relationship between the amount of the fee and the public facility or portion of the public facility attributable to the development on which the fee is imposed.
5. Provide an annual accounting of any portion of the fee remaining unexpended, whether committed or uncommitted, in the School District's accounts five or more years after it was collected.

In other words, AB 1600 limits the ability of a school district to levy School Fees unless (i) there is a need for the School Fee revenues generated and (ii) there is a nexus or relationship between the need for School Fee revenues and the type of development project on which the School Fee is imposed. (The requirements of AB 1600 were clarified with the passage in 2006 of AB 2751, which codifies the findings of *Shapell Industries vs. Milpitas Unified School District*.) The Study will provide information necessary to establish such a nexus between School Fees and residential development.

C. AB 181

AB 181, enacted by the State in 1989, made significant changes in several State Codes, including Sections 53080 et seq. of the Government Code which was re-codified as Sections 17620 et seq. of the Education Code on January 1, 1998. Changes in Section 53080 included additional requirements and procedures for imposing School Fees and other conditions on new development. Specifically, AB 181 imposes more stringent nexus requirements on school districts that wish to levy School Fees on CID, as follows:

1. In order to levy a School Fee on CID, a formal study must be conducted to determine the impact of "the increased number of employees anticipated to result" from new CID on the "cost of providing school facilities within the School District".
2. Only that portion of the School Fee justified by the "nexus findings" contained in this study may be levied. Nexus findings must be made on an individual project basis or on the basis of categories of CID and must "utilize employee generation estimates that are based on commercial/industrial factors within the school district."

Categories to be evaluated may include, but are not limited to, office, retail, transportation, communications and utilities, light industrial, heavy industrial, research and development, and warehouse uses.

- 3. Starting in 1990, maximum School Fees for residential and CID will be subject to increases every two (2) years rather than annually.
- 4. An appeals procedure shall be established whereby the levy of School Fees on a commercial/industrial project may be appealed to the governing board of a school district. Grounds for an appeal must include, but are not limited to, improper project classification by commercial/industrial category, or the application of improper or inaccurate employee or student generation factors to the project.

In summary, AB 181 establishes additional requirements which must be satisfied by school districts prior to their levying School Fees on CID.

III. METHODOLOGY OF STUDY

Cooperative Strategies is projecting an increase in student enrollment attributable to new development in future years. This projected growth will create a demand for new school facilities to be constructed within the School District and the need to incur significant school facilities costs to meet that demand. As a result, the School District has determined that School Fees should be levied on new development projects. The objective of the Study is to provide a basis for such findings consistent with the requirements of AB 2926, AB 1600, AB 181, and the provisions of Section 66001 of the Government Code.

A. RESIDENTIAL METHODOLOGY

Cooperative Strategies has determined that School Fees must be levied on new residential projects, if findings can be made that such projects will lead to higher student enrollment and increased facilities costs. In order to evaluate the existence of a nexus, the Study identifies and analyzes the various connections or linkages between residential development and (i) the need for school facilities, (ii) the cost of school facilities, and (iii) the amount of School Fees that can justifiably be levied. The primary linkages identified include the following:

1. Housing projections - The number of future residential units to be constructed within the boundaries of the School District.
2. Student generation - The number of students generated from a residential unit within the School District.
3. Facility requirements - The number of new school facilities required to house students generated from new residential units
4. School facilities cost impacts - The costs to the School District associated with the construction of new school facilities.
5. School Fee requirements – The School District's need to levy School Fees to cover the cost of new school facilities.

The above linkages result in a series of impacts which (i) connect new residential development with increased school facilities costs and (ii) connect School Fees per residential building square foot with increased facilities costs.

B. COMMERCIAL/INDUSTRIAL METHODOLOGY

Cooperative Strategies has also determined that School Fees must be levied on new CID projects. In order to determine the nexus relationships identified in AB 181, the Study analyzes the various linkages between CID and (i) the need for school facilities, (ii) the cost of school facilities, and (iii) the amount of the School Fee that can justifiably be levied. The primary connections or linkages include the following:

1. Job creation (i.e., new CID within the School District creates new jobs);
2. Household formation (i.e., job creation within the School District leads to the formation of new households in the School District);
3. Student generation (i.e., household formation within the School District generates new students);
4. Facilities requirements (i.e., student generation within the School District leads to the need to incur additional costs for new school facilities); and
5. School Fee requirements (i.e., additional costs for new school facilities within the School District leads to the need to levy School Fees for new development).

The above linkages result in a series of impacts which (i) connect new CID with increased school facilities costs and (ii) connect increased school facilities costs with School Fees on CID buildings. These impacts are identified for different CID land use categories, based on a "prototypical unit" of 1,000 square feet of new commercial or industrial floor space for each category. These "linkage impacts" include five (5) major types:

1. Employment Impacts
2. Household Impacts
3. Student Generation Impacts
4. School Facilities Cost Impacts
5. Fee Revenues

The nature and components of these impacts are summarized in Section III.C, along with the key assumptions and data sources used in estimating their magnitude.

Analysis of the first four (4) linkage impacts provides an estimate of the gross school facilities cost impacts per 1,000 square feet of floor space for each CID category. Analysis and comparison of all five (5) impacts provide an estimate of (i) net school facilities cost impacts (i.e., gross school facilities cost impacts minus residential revenues) per 1,000 square feet of CID floor space and (ii) the maximum commercial/industrial School Fee that can be justified.

C. COMMERCIAL/INDUSTRIAL LAND USE CATEGORIES

Linkage impacts are analyzed for the following CID land use categories:

1. Retail and Services
2. Office
3. Research and Development
4. Industrial/Warehouse/Manufacturing
5. Hospital
6. Hotel/Motel
7. Self-Storage

RETAIL AND SERVICES

The retail and services category includes commercial establishments which sell general merchandise, building materials, hard goods, apparel, and other items and services to consumers. Additional establishments in the retail and services category include nurseries, discount stores, restaurants, entertainment theme parks, new/used car sales facilities, service stations, supermarkets, banks, real estate sales offices, and similar uses.

OFFICE

A general office building houses one (1) or more tenants and is the location where affairs of a business, commercial or industrial organization, professional person or firm are conducted. The building or buildings may be limited to one (1) tenant, either the owner or lessee, or contain a mixture of tenants including professional services, insurance companies, investment brokers, company headquarters, and services for the tenants such as a bank or savings and loan, a restaurant or cafeteria, and service retail and services facilities. There may be large amounts of space used for file storage or data processing.

The office category may also include medical offices that provide diagnoses and outpatient care on a routine basis, but which are unable to provide prolonged in-house medical/surgical care. A medical office is generally operated by either a single private physician or a group of doctors.

RESEARCH AND DEVELOPMENT

Research and development facilities are those primarily associated with the application of scientific research to the development of high technology products. Areas of concentration include materials, science, computer, electronic, and telecommunications products. Facilities may also contain offices and fabrication areas. Activities performed range from pure research to product development, testing, assembly, and distribution.

INDUSTRIAL/WAREHOUSE/MANUFACTURING

Warehouses are facilities that are primarily devoted to the storage of materials. They may also include office and maintenance areas. This category also includes buildings in which a storage unit or vault is rented for the storage of goods.

Manufacturing facilities are building structures where the primary activity is the conversion of raw materials or parts into finished products. Size and type of activity may vary substantially from one facility to another. In addition to actual production of goods, manufacturing facilities generally have office, warehouse, research and associated functions. This category includes light industrial facilities such as printing plants, material testing laboratories, assemblers of data processing equipment, and power stations.

HOSPITAL

Hospital refers to any institution where medical or surgical care is given to non-ambulatory and ambulatory patients. The term does not however, refer to medical clinics (facilities that provide diagnoses and outpatient care only) or to nursing homes (facilities devoted to the care of persons unable to care for themselves).

HOTEL/MOTEL

Hotels and motels are commercial establishments primarily engaged in providing lodging, or lodging and meals, for the general public. As defined by Government Code Section 65995(d), the hotel/motel category includes, but is not limited to, any hotel, motel, inn, tourist home, or other lodging for which the maximum term of occupancy does not exceed 30 days.

It does not, however, include any residential hotel as defined by Section 50519(b)(1) of the Health and Safety Code.

SELF-STORAGE

This category includes buildings in which a storage unit or vault is rented for the storage of goods and/or personal materials. This category may also include office areas associated with storage.

Note that CID land use categories may include different industry types. For example, firms in the transportation, communications, or utilities industries may be classified in up to six (6) of the seven (7) land use categories shown above. Similarly, retail firms may also occupy office or industrial space (e.g., for corporate headquarters or warehousing) and manufacturing firms may occupy retail space (e.g., factory retail outlets). In evaluating any given project, the School District should assign the project to whichever CID category is the predominant use within the project.

IV. FACILITIES CAPACITY AND STUDENT ENROLLMENT

In order to determine whether the School District's existing school facilities contain excess capacity to house students generated by new residential and CID development, school year 2021/2022 student enrollment and school facilities capacity of the School District were evaluated.

Collectively, the School District's school facilities in school year 2021/2022 have a capacity of 10,128 based on classroom utilization information provided by the School District, of which 4,278 are at the elementary school level, 2,310 are at the middle school level, and 3,540 are at the high school level. The enrollment of the School District in school year 2021/2022 is 9,599 students. As shown in Table 1 below, the School District's facilities capacity exceeds student enrollment at all school levels in school year 2021/2022.

T A B L E 1

EXISTING SCHOOL FACILITIES CAPACITY AND STUDENT ENROLLMENT

| School Level | 2021/2022 Facilities Capacity | 2021/2022 Student Enrollment | Excess/ (Shortage) Capacity |
|---------------------------------|-------------------------------|------------------------------|-----------------------------|
| Elementary School (Grades TK-5) | 4,278 | 4,139 | 139 |
| Middle School (Grades 6-8) | 2,310 | 2,204 | 106 |
| High School (Grades 9-12) | 3,540 | 3,256 | 284 |
| Total | 10,128 | 9,599 | 529 |

As indicated in Table 1, 139 elementary school seats, 106 middle school seats and 284 high school seats are available to house students generated from Future Units. Due to the planned expansion to universal transitional kindergarten by school year 2025/2026, Cooperative Strategies matriculated existing TK students forward five (5) years to determine whether any existing surplus seats at the elementary school level will be needed to house future TK students generated from existing residential units. This resulted in a reduction of surplus seats to zero (0) at the elementary school level. These surplus seats will be addressed in Section V on the following page.

Additionally, due to the age of the School District’s facilities and their current state, the School District will need to perform significant reconstruction and modernization of its existing school facilities, to adequately house students in the future. These reconstruction needs will be discussed in Section V.E.

V. IMPACT OF RESIDENTIAL DEVELOPMENT ON SCHOOL FACILITIES NEEDS

As discussed in Section III, the objective of the Study is to determine the appropriateness of the imposition of a School Fee to finance school facilities necessitated by students to be generated from new residential development. Section III outlined the methodology which was employed in the Study to meet that objective. Section V is a step-by-step presentation of the results of the analysis.

A. PROJECTED RESIDENTIAL DEVELOPMENT WITHIN THE SCHOOL DISTRICT

The initial step in developing a nexus as required by AB 2926 and AB 1600 is to determine the number of Future Units to be constructed within the School District's boundaries. Based on information provided by SCAG, the School District expects the construction of approximately 3,076 Future Units through calendar year 2035. Of these 3,076, Future Units, 193 are expected to be SFD units and 2,883 are expected to be MFA units. Table 2 distinguishes Future Units by land use.

TABLE 2
FUTURE UNITS

| Land Uses | Total Future Units |
|------------------------|--------------------|
| Single Family Detached | 193 |
| Multi-Family Attached | 2,883 |
| Total Units | 3,076 |

B. RECONSTRUCTION

Reconstruction is the act of replacing existing structures with new construction, which may have an alternative land use (i.e., commercial/industrial versus residential) or may consist of different residential unit types (i.e., SFD versus MFA, etc.).

B1. RESIDENTIAL RECONSTRUCTION

Residential Reconstruction consists of voluntarily demolishing existing residential units and replacing them with new residential development. To the extent Reconstruction increases the residential square footage beyond what was demolished ("New Square Footage"), the increase in square footage is subject to the applicable School Fee as such construction is considered new residential development. As for the amount of square footage constructed that replaces only the previously constructed square footage ("Replacement Square Footage"), the determination of the applicable fee, if any, is subject to a showing that the Replacement Square Footage results in an increase in student enrollment and, therefore, an additional impact being placed on the School District to provide school facilities for new student enrollment.

Prior to the imposition of fees on Replacement Square Footage, the School District shall undertake an analysis on any future proposed projects(s) to examine the extent to which an increase in enrollment can be expected from Replacement Square Footage due to any differential in SGFs as identified in the Study for the applicable unit types between existing square footage and Replacement Square Footage. Any such fee that is calculated for the Replacement Square Footage shall not exceed the School Fee that is in effect at such time.

B2. RECONSTRUCTION OF COMMERCIAL/INDUSTRIAL CONSTRUCTION INTO RESIDENTIAL CONSTRUCTION

The voluntary demolition of existing commercial/industrial buildings and replacement of them with new residential development is a different category of Reconstruction. Cooperative Strategies is aware that such types of Reconstruction may occur within the School District in the future, however, Cooperative Strategies was unable to find information (i) about the amount planned within the School District in the future or (ii) historical levels, which might indicate the amount to be expected in the future. Due to the lack of information, the School District has decided to evaluate the impacts of Commercial/Industrial Reconstruction projects on a case-by-case basis and will make a determination of whether a fee credit is justified based on the nature of the project.

C. STUDENT GENERATION FACTORS PER RESIDENTIAL UNIT

In order to analyze the impact on the School District’s student enrollment from Future Units, Cooperative Strategies calculated SGFs for SFD and MFA units. The process of determining SGFs involved cross-referencing the School District’s enrollment data against the County Assessor residential data.

Sorting and extracting the County Assessor records by land use, Cooperative Strategies developed a database of 12,919 SFD units. This database was then compared with the School District's student enrollment database to identify address matches. Upon comparison of the two (2) databases, 5,145 student matches were found, resulting in the SGFs shown in Table 3.

T A B L E 3

STUDENT GENERATION FACTORS FOR SINGLE FAMILY DETACHED UNITS

| School Level | Students Matched | Single Family Detached Units | Student Generation Factors |
|-------------------|------------------|------------------------------|----------------------------|
| Elementary School | 2,284 | 12,919 | 0.1768 |
| Middle School | 1,206 | 12,919 | 0.0934 |
| High School | 1,655 | 12,919 | 0.1281 |
| Total | 5,145 | N/A | 0.3983 |

A procedure identical to the one used in calculating the SGFs for SFD units was used to determine SGFs for MFA units. A total of 1,997 students matched to the MFA database which consisted of 6,965 units. The resulting SGFs for MFA units are shown in Table 4 on the following page.

T A B L E 4

STUDENT GENERATION FACTORS FOR MUTLI-FAMILY ATTACHED UNITS

| School Level | Students Matched | Multi-Family Attached Units | Student Generation Factors |
|-------------------|------------------|-----------------------------|----------------------------|
| Elementary School | 923 | 6,965 | 0.1325 |
| Middle School | 443 | 6,965 | 0.0636 |
| High School | 631 | 6,965 | 0.0906 |
| Total | 1,997 | N/A | 0.2867 |

However, due to incomplete and incorrect address information in both the student enrollment and residential databases, Cooperative Strategies was unable to match all of the School District's students. The results are SGFs that understate the number of students generated by SFD and MFA units. After accounting for incoming interdistrict students that reside outside of the School District's boundaries, there were 285 unmatched students. Therefore, Cooperative Strategies adjusted the SGFs listed in Tables 3 and 4 based on a rate which considers the number of students successfully matched to a school level and land use. The adjusted SGFs for each land use by school level are shown in Table 5.

T A B L E 5

ADJUSTED STUDENT GENERATION FACTORS

| School Levels | Single Family Detached Units | Multi-Family Attached Units |
|-------------------|------------------------------|-----------------------------|
| Elementary School | 0.1821 | 0.1365 |
| Middle School | 0.0962 | 0.0655 |
| High School | 0.1335 | 0.0945 |
| Total | 0.4118 | 0.2965 |

D. SCHOOL DISTRICT FACILITIES REQUIREMENTS

By multiplying the Future Units as listed in Table 2 by the SGFs identified in Table 5, the Study determined the projected number of new students to be generated from Future Units. The Projected Student Enrollment by school level is shown in Table 6.

T A B L E 6

PROJECTED STUDENT ENROLLMENT FROM FUTURE UNITS

| School Level | Projected Student Enrollment from Future SFD Units | Projected Student Enrollment from Future MFA Units | Projected Student Enrollment from Future Units |
|-------------------|--|--|--|
| Elementary School | 35 | 394 | 429 |
| Middle School | 19 | 189 | 208 |
| High School | 26 | 272 | 298 |
| Total | 80 | 855 | 935 |

As indicated in Section IV, 106 middle school seats and 284 high school seats are available to accommodate the Projected Student Enrollment. Therefore, the Projected Unhoused Students are less than the Projected Student Enrollment at the middle school and high school levels. Table 7 shows Projected Unhoused Students for the School District.

T A B L E 7

PROJECTED UNHOUSED STUDENTS FROM FUTURE UNITS

| School Levels | Projected Students from Future Units | Surplus Seats | Projected Unhoused Students |
|-------------------|--------------------------------------|---------------|-----------------------------|
| Elementary School | 429 | 0 | 429 |
| Middle School | 208 | 106 | 102 |
| High School | 298 | 284 | 14 |
| Total | 935 | 390 | 545 |

To determine the number of elementary school, middle school, and high school facilities necessary to adequately house the Projected Unhoused Students, Cooperative Strategies divided the Projected Unhoused Students by the estimated school facilities capacity at each school level, as provided by the School District. The additional school facilities requirements are identified in Table 8.

T A B L E 8

ADDITIONAL SCHOOL FACILITIES FOR PROJECTED UNHOUSED STUDENTS

| School Levels | Projected Unhoused Students | Estimated Teaching Station Capacity | Additional Teaching Stations Needed |
|--------------------------|------------------------------------|--|--|
| Elementary School | 429 | 25 | 17.1600 |
| Middle School | 102 | 27 | 3.7778 |
| High School | 14 | 27 | 0.5185 |

E. SCHOOL DISTRICT FACILITIES COSTS

The estimated cost of expanding the existing school facilities by adding additional teaching stations is based costs experienced by other school districts in the County. It must be noted that the facilities costs are in 2022 dollars and do not include interest costs associated with debt incurred to finance the construction of facilities. The estimated site costs and facility construction costs by school level are shown in Table 9.

T A B L E 9

ESTIMATED SCHOOL FACILITIES COSTS (2022\$)

| School Levels | Estimated Total Cost per Teaching Station |
|--------------------------|--|
| Elementary School | \$1,035,000 |
| Middle School | \$1,035,000 |
| High School | \$1,035,000 |

As mentioned in Section IV, due to the age of the existing school facilities and their current state, the School District will need to perform significant reconstruction and modernization at all school levels in order to adequately serve students in the future.

In order to determine the reconstruction impact of students generated from Future Units, Cooperative Strategies divided total reconstruction cost estimates in the School District’s Master Plan by the total capacity (Table 1). Based on this information, Cooperative Strategies estimates reconstruction and modernization costs to be \$42,383 per elementary school seat, \$36,049 per middle school seat, and \$37,422 per high school seat. Table 10 illustrates the total facilities reconstruction cost per student.

T A B L E 1 0

ESTIMATED RECONSTRUCTION FACILITIES COSTS (2022\$)

| School Levels | Total Reconstruction Costs | Total Capacity | Reconstruction Cost per Seat |
|--------------------------|-----------------------------------|-----------------------|-------------------------------------|
| Elementary School | \$181,317,853 | 4,278 | \$42,383 |
| Middle School | \$83,274,383 | 2,310 | \$36,049 |
| High School | \$132,476,533 | 3,540 | \$37,422 |

The costs in Table 9 do not include costs associated with Central Administrative and Support Facilities. As indicated in Table 7, Future Units will cause the enrollment of the School District to increase by approximately 545 students. In accordance with the Provisions of Chapter 341, Statutes of 1992, SB 1612, the SAB adopted a report on January 26, 1994, requiring approximately four (4) square feet of central administrative and support facilities for every student. Based on this report and the estimated cost per square foot to construct and furnish these types of facilities, the Study incorporates a Central Administrative and Support Facilities cost impact of \$800 per student.

F. TOTAL SCHOOL FACILITIES COST IMPACTS

To determine the total school facilities cost impacts caused by Future Units, Cooperative Strategies (i) multiplied the school facilities costs (Table 9) by the additional school facilities needed (Table 8), (ii) multiplied the central administrative and support facilities costs per student (above paragraph) by the Projected Unhoused Students (Table 7), and (iii) multiplied the number of students projected to occupy existing surplus seats (Table 7) by the reconstruction cost per seat (Table 10). Table 11 illustrates the total school facilities cost impacts from future residential development.

T A B L E 1 1
TOTAL SCHOOL FACILITIES COST IMPACTS FROM FUTURE UNITS (2022\$)

| School Levels | Cost Per Teaching Station/Student | Teaching Stations Required/Students Generated | Total School Facilities Cost Impacts |
|------------------------------|-----------------------------------|---|--------------------------------------|
| Elementary School | \$1,035,000 | 17.1600 | \$17,760,600 |
| Middle School | \$1,035,000 | 3.7778 | \$3,910,023 |
| High School | \$1,035,000 | 0.5185 | \$536,648 |
| Central Admin Impacts | \$800 | 545 | \$436,000 |
| ES Modernization | \$42,383 | 0 | \$0 |
| MS Modernization | \$36,049 | 106 | \$3,821,194 |
| HS Modernization | \$37,422 | 284 | \$10,627,848 |
| Total | N/A | N/A | \$37,092,313 |

G. SCHOOL FACILITIES COST IMPACTS PER RESIDENTIAL UNIT

To determine the total school facilities cost impacts per future residential unit, the total school facilities cost impacts listed above need to first be apportioned by land use based on the number of elementary school, middle school, and high school students to be generated from such land use. Table 12 shows total school facilities cost impacts by land use.

T A B L E 1 2
TOTAL SCHOOL FACILITIES COST IMPACTS BY LAND USE (2022\$)

| School Level | Single Family Detached Units | Multi-Family Attached Units | Total School Facilities Cost Impacts |
|--------------------------|------------------------------|-----------------------------|--------------------------------------|
| Elementary School | \$1,477,000 | \$16,626,800 | \$18,103,800 |
| Middle School | \$712,692 | \$7,100,125 | \$7,812,817 |
| High School | \$974,682 | \$10,201,014 | \$11,175,696 |
| Total | \$3,164,374 | \$33,927,939 | \$37,092,313 |

Total school facilities cost impacts for each land use were then divided by the number of Future Units in such land use to determine school facilities cost impacts per SFD unit and MFA unit. These impacts are shown in Table 13.

T A B L E 1 3
SCHOOL FACILITIES COST IMPACTS PER FUTURE UNIT (2022\$)

| Land Uses | Total School Facilities Cost Impacts | Future Units | School Facilities Cost Impacts per Residential Unit |
|-------------------------------|--------------------------------------|--------------|---|
| Single Family Detached | \$3,164,374 | 193 | \$16,396 |
| Multi-Family Attached | \$33,927,939 | 2,883 | \$11,768 |

H. SCHOOL FACILITIES COST IMPACTS PER SQUARE FOOT

To determine the school facilities cost impacts per square foot of residential construction for each land use, the school facilities cost impacts per unit listed in Table 13 were divided by the average square footage of such type of residential unit. Using square footage information for recently constructed units obtained from the County Assessor, Cooperative Strategies estimates that the average square footage of an SFD unit in the School District is projected to be 3,000 square feet while the average square footage of an MFA unit is projected to be 1,750 square feet. Table 14 shows the school facilities cost impacts per square foot of residential construction in the School District.

T A B L E 1 4

SCHOOL FACILITIES COST IMPACTS PER RESIDENTIAL SQUARE FOOT (2022\$)

| Land Uses | School Facilities Cost Impacts per Residential Unit | Average Square Footage | School Facilities Cost Impacts per Square Foot |
|-------------------------------|--|-------------------------------|---|
| Single Family Detached | \$16,396 | 3,000 | \$5.47 |
| Multi-Family Attached | \$11,768 | 1,750 | \$6.72 |

VI. IMPACT OF COMMERCIAL/INDUSTRIAL DEVELOPMENT ON SCHOOL FACILITIES NEEDS

This section presents the quantitative findings of the commercial/industrial nexus analysis summarized in Section III. In particular, this section presents estimates of the following:

1. All "linkage impacts" discussed in Section III, by CID land use category.
2. Gross school facilities cost impacts per 1,000 square feet of commercial/industrial floor space.
3. Net school facilities cost impacts (i.e., gross school facility cost impacts minus residential revenues) per 1,000 square feet of commercial/industrial floor space.
4. The percentage of the maximum CID School Fee per square foot allowed by law that can be justified to pay for new school facilities.

A. EMPLOYMENT IMPACTS

As indicated in Section III, employment impacts for different CID categories equal the estimated number of on-site employees generated per 1,000 square feet of commercial/industrial floor space, which are referred to in the Study as CID Land Use Categories. Consistent with the provisions of Section 17621(e)(1)(B) of the Education Code, employment impacts for each category are based on data from SANDAG. The employment impacts are shown in Table 15 on the following page.

T A B L E 1 5

EMPLOYMENT IMPACTS PER 1,000 SQUARE FEET (2022\$)

| CID Land Use Category | Square Feet per Employee |
|---|---------------------------------|
| Retail and Services | 447 |
| Office | 286 |
| Research and Development | 329 |
| Industrial/Warehouse/Manufacturing | 371 |
| Hospital | 360 |
| Hotel/Motel | 883 |
| Self-Storage | 15,552 |

B. HOUSEHOLD IMPACTS

As noted in Section III, household impacts equal the estimated number of households associated with each category of employment impacts, per 1,000 square feet of commercial/industrial floor space. Household impacts include the following components:

1. Households per Employee

The average number of households per employee are calculated based on information obtained from the Census. Based on this information, the total household impacts are 0.73 households per employee within the School District.

2. Employed Persons Living within the School District

In order to determine the number of employed persons who live within the School District, Cooperative Strategies utilized data from the Census. Based on this data, approximately 35.39 percent of the employed persons within the School District are estimated to live within the School District. This trend is expected to increase as new residential and CID projects are approved and additional homes and jobs are created within the School District.

3. Propensity to Occupy New Homes

The propensity to occupy new housing within the general area of the School District helps determine the number of employees generated from new homes. Based on data on recent resales and new home sales obtained from CoreLogic, new home sales in the School District were estimated to equal 2.37 percent of the total housing units which experienced occupant turnover between 2018 and 2019.

4. Total Household Impact

In order to determine the Total Household Impact of new residential units, the Study multiplied the average employed persons per household, employed person living within the School District, and the propensity to occupy new homes. This helps determine the number of new employees coming to live and work within the School District produced by new residential development, as shown in Table 16.

T A B L E 1 6

TOTAL HOUSEHOLD IMPACTS FROM NEW CID

| Household Impact | Factor |
|---|---------------|
| Households per Employees | 0.7300 |
| Employees Living within the School District | 35.39% |
| Households with Employees Working within the School District | 0.2583 |
| Propensity to Occupy New Homes | 2.37% |
| Total Household Impacts | 0.0061 |

C. STUDENT GENERATION IMPACTS

As noted in Section III, student generation impacts equal the number of the School District's students associated with each category of CID space. Separate student generation impacts are estimated for each CID category and school level.

1. RESIDENTIAL STUDENT GENERATION IMPACTS

In order to analyze household formation as a result of new CID, the SGFs shown in Table 5 must be blended. To blend the SGFs of the two (2) land uses into a single SGF for each school level, the land uses were weighted in proportion to each type's percentage of the future residential units to be constructed within the School District. Applying these weighting factors yields the following blended SGFs shown in Table 17.

T A B L E 1 7

BLENDED STUDENT GENERATION FACTORS

| School Level | Student Generation Factors |
|-------------------|----------------------------|
| Elementary School | 0.1394 |
| Middle School | 0.0674 |
| High School | 0.0969 |

2. TOTAL STUDENT GENERATION IMPACTS

Multiplying total household impacts shown in Table 16 by the blended SGFs shown in Table 17 results in the average student generation impacts. These average student generation impacts are shown by school level in Table 18.

T A B L E 1 8

AVERAGE STUDENT GENERATION IMPACTS

| School Level | Student Generation Factors | Total Household Impacts | Average Student Generation Impacts |
|-------------------|----------------------------|-------------------------|------------------------------------|
| Elementary School | 0.1394 | 0.0061 | 0.0009 |
| Middle School | 0.0674 | 0.0061 | 0.0004 |
| High School | 0.0969 | 0.0061 | 0.0006 |

D. INTER-DISTRICT TRANSFER IMPACTS

The Study also evaluates the impact of students attending the School District on an inter-district transfer basis. The inter-district transfer rate is determined by calculating the ratio of student transfers into the School District's schools by the number of persons employed within its boundaries. Based on information provided by the School District, total student transfers into the School District's schools for school year 2021/2022 total 714 at the elementary school level, 432 at the middle school level, and 741 at the high school level. Employment within the School District's area is estimated at 24,909 persons based on employment estimates provided by SCAG Table 19 shows the inter-district transfer impacts by school level.

T A B L E 1 9

INTER-DISTRICT TRANSFER IMPACTS

| School Level | Inter-District Transfer Impacts |
|-------------------|---------------------------------|
| Elementary School | 0.0285 |
| Middle School | 0.0172 |
| High School | 0.0295 |

E. TOTAL STUDENT GENERATION IMPACT

To determine the total student generation impacts of CID on the School District, the average student generation impacts from Table 18 are added to the inter-district transfer impacts from Table 19. The resulting total student generation impacts are displayed in Table 20.

T A B L E 2 0

TOTAL STUDENT GENERATION IMPACTS

| School Level | Average Student Generation Impacts | Inter-District Transfer Impacts | Total Student Generation Impacts |
|-------------------|------------------------------------|---------------------------------|----------------------------------|
| Elementary School | 0.0009 | 0.0285 | 0.0294 |
| Middle School | 0.0004 | 0.0172 | 0.0176 |
| High School | 0.0006 | 0.0295 | 0.0301 |

F. GROSS SCHOOL FACILITIES COST IMPACTS

As noted in Section III, school facilities cost impacts equal the gross school facilities cost impacts (exclusive of residential revenues) associated with the total student generation impact of each CID category.

1. SCHOOL FACILITIES COSTS PER STUDENT

The school facilities costs per student are the average cost impact produced by students generated from Future Units. This impact estimate is derived from the school facilities costs (Table 12) divided by the Projected Student Enrollment from Future Units (Table 7) by school level. Multiplying the total student generation impacts by the school facilities costs per student results in the gross school facilities cost impacts shown in Table 21.

T A B L E 2 1

GROSS SCHOOL FACILITIES COSTS IMPACTS PER HOUSEHOLD (2022\$)

| School Level | Total Student Generation Impacts | Cost per Student | Gross School Facilities Costs Impacts per Household |
|-------------------|----------------------------------|------------------|---|
| Elementary School | 0.0294 | \$42,200 | \$1,240.68 |
| Middle School | 0.0176 | \$37,562 | \$661.09 |
| High School | 0.0301 | \$37,502 | \$1,128.81 |
| Total | N/A | N/A | \$3,030.58 |

G. FEE REVENUES

As noted in Section III, fee revenues include two (2) components: residential revenues and potential CID School Fee revenues.

1. RESIDENTIAL REVENUES AND NET SCHOOL FACILITY COSTS

Residential revenues equal the maximum revenues from residential development associated with each school level. These revenues are derived from the School District's proposed School Fee of \$4.79 per square foot multiplied by the School District's weighted average square footage for residential units of 1,828 square feet. Based on this calculation, the residential revenues per unit in the School District are estimated to be \$8,756. Multiplying the total household impact shown in Table 16 by residential revenues results in the residential revenues per student shown in Table 22.

T A B L E 2 2

RESIDENTIAL REVENUES PER HOUSEHOLD (2022\$)

| Item | Amount |
|--|----------------|
| Revenue per Residential Unit | \$8,756 |
| Total Household Impact | 0.0061 |
| Residential Revenue per Household | \$53.41 |

2. NET SCHOOL FACILITIES COST IMPACTS

In order to calculate the net school facilities cost impacts per grade level, the residential revenues shown in Table 22 were subtracted from the gross school facilities cost impacts shown in Table 21. The results are the net school facilities cost impacts that must be funded by CID School Fees, as shown in Table 23.

T A B L E 2 3

**NET SCHOOL FACILITIES COST IMPACTS
PER HOUSEHOLD (2022\$)**

| Item | Amount |
|---|-------------------|
| Gross School Facilities Cost Impacts per Household | \$3,030.58 |
| Residential Revenue per Household | \$53.41 |
| Net School Facilities Cost Impacts per Household | \$2,977.17 |

H. JUSTIFICATION OF COMMERCIAL/INDUSTRIAL SCHOOL FEES

Dividing net school facilities cost impacts shown in Table 22 by total the square feet per employee for each land use category, as shown in Table 15, results in the CID impacts shown in Table 24.

T A B L E 2 4

SCHOOL FACILITIES COST IMPACTS PER SQUARE FOOT (2022\$)

| CID Land Use Category | Net Impact per Household | Square Feet per Employee | Cost Impact per Square Foot Of CID |
|---|---------------------------------|---------------------------------|---|
| Retail and Services | \$2,977.17 | 447 | \$6.660 |
| Office | \$2,977.17 | 286 | \$10.410 |
| Research and Development | \$2,977.17 | 329 | \$9.049 |
| Industrial/Warehouse/Manufacturing | \$2,977.17 | 371 | \$8.025 |
| Hospital | \$2,977.17 | 360 | \$8.270 |
| Hotel/Motel | \$2,977.17 | 883 | \$3.372 |
| Self-Storage | \$2,977.17 | 15,552 | \$0.191 |

VII. CONCLUSION

On February 23, 2022, the SAB increased the maximum Residential and CID School Fees authorized by Section 17620 of the Education Code from \$4.08 to \$4.79 per residential building square foot, and from \$0.66 to \$0.78 per CID square foot for unified school districts.

This section summarizes the findings of the Study for new residential and commercial/industrial construction within the School District. In particular, this section summarizes the following:

1. RESIDENTIAL FEES

As shown in Table 14, the impact per residential square foot exceeds the maximum residential School Fee per square foot, therefore, the Study concludes that the School District is fully justified in levying \$4.79 per square foot for all new residential development within its boundaries subject to the limitations under the law.

Based on this information, the School District is justified in charging the Statutory Fee Amounts per square foot shown in Table 25 on new residential construction:

T A B L E 2 5

MAXIMUM JUSTIFIED STATUTORY RESIDENTIAL FEE PER SQUARE FOOT (2022\$)

| Item | Residential Fee per Square Foot |
|-------------------------------|---------------------------------|
| Single Family Detached | \$4.79 |
| Multifamily Attached | \$4.79 |

2. COMMERCIAL/INDUSTRIAL FEES

As shown in Table 24, the impact per CID square foot exceeds the maximum CID School Fee of \$0.78 per square foot for all CID land use categories, except for Self-Storage. The Study concludes that the School District is fully justified in levying the maximum CID School Fee of \$0.78 per square foot for all CID land use categories, except for self-storage where it is justified in levying \$0.191 per square foot of CID development.

Based on this information, the School District is justified in charging the Statutory Fee Amounts per square foot shown in Table 26 on new CID construction:

T A B L E 2 6
**MAXIMUM JUSTIFIED STATUTORY CID FEE
PER SQUARE FOOT (2022\$)**

| CID Land Use Category | CID Fee per Square Foot |
|---|-------------------------|
| Retail and Services | \$0.780 |
| Office | \$0.780 |
| Research and Development | \$0.780 |
| Industrial/Warehouse/Manufacturing | \$0.780 |
| Hospital | \$0.780 |
| Hotel/Motel | \$0.780 |
| Self-Storage | \$0.191 |
