

Advice about Calc BC from those who've been there...

About flashcards...

[Jon Miller](#) - Those flashcards were like 85% of the multiple choice on the AP Exam

[Hayley Huff](#) - Memorize your flashcards!

[Faye Jessup](#) - If I could do one thing differently, I would study my flashcards more. As much as I hate them, they do help a lot. I also would do more FRQ to prep for the test instead of focusing on MC.

[Kenzie Bragg](#) - Knowing your flashcards will get you through like 75% of the year. Even when you don't feel like memorizing, it will pay off in the end.

[Molly Shoemaker](#) - And don't study flashcards in the last 5 minutes of lunch every time there's a flashcard quiz. Actually learn them. They're important.

[Gabby Bische](#) - Study your flashcards! You have no idea how important it is to know them all the time.

[Abbie Aldridge](#) - Mendy is an angel and when an angel tells you to study your flashcards, you study your flashcards

[Carter Holmes](#) - Flashcards are your friend.

[Julia Frame](#) - You might want to look at your flashcards before the quiz. It can be rough if you don't.

[Michelle Nixon](#) - When it comes to your flashcards, you need to have them memorized, but also make sure you take the time to understand the actual concepts behind them and how to apply them.

[Catherine Pursifull](#) - Study your flashcards, and never take advantage of Mendenhall's kindness and leniency.

About studying and homework...

[Tyler Nolan](#) - To the kid like me that excels at getting through classes without studying or doing homework: there is no way to BS your way around the convergence tests or the Taylor Polynomial equation, just memorize the thing for once in your life.

[Abby Callis](#) - All you really have to do is take notes in class and do ALL the assigned homework and you'll feel confident in your abilities. Also flashcards are super useful.

[Nicholas Rizzo](#) - This is probably one of the only classes you actually want to do your homework and study in.

[Isaac Smith](#) - Do ALL of your homework, no matter what else you have going on, nothing is more important than calculus, also don't panic

[Jennifer Dreessen](#) - Make sure you do your own homework, it's easy to copy but it hurts you in the long run.

About the pledge to review five minutes a day before starting HW...

[Madison Rowe](#) - I wish I would've listened to Mrs. Mendenhall when she says to take ten minutes every night to review instead of cramming the night before.

[Justin Kmetz](#) - Study the flashcards and do 5 mins of something every night.

[Moni Krasteva](#) - Don't just sign the pledge, but actually do those 5 minutes of review.

[Jacob Birkofer](#) - If you cram you should be okay but studying every day just a little bit will benefit you in the long run, especially on the AP test

If a test doesn't go so well...

[Nick Schulenberg](#) - Do bad on 1 test every quarter so that it forces you to study your flash cards to get back to an A.

[Andrew Todd](#) - Getting bad grades will definitely motivate you to do better on the next test, take my word for it.

In general...

[Noah Colarusso](#) - enjoy the class and don't stress so much, you're in here for a reason

[Madison Mehringer](#) - If something is confusing, don't be afraid to ask. It's better to ask than be lost.

[Molly Shoemaker](#) - Just remember that 50% still means you get a 3.

[Nicole Davis](#) - Don't give up when you don't know how to do something because that will happen. You just gotta get through it.

[Maranda Peak](#) - Don't slack off- if you procrastinate, then it will be difficult to find the motivation to catch up, and you will regret it when the test comes.

[Bryce Dixon](#) - Come into class early in the mornings before tests to ask questions and do review problems. It helps a lot.

[Camryn Cardinal](#) - Don't wait until the last minute to ask questions about things you don't understand and don't forget to study your flashcards.

[Zachary Shellhorn](#) - Don't stress about the class and make the most fun out of math
