Name	Date	

Claire went home after school and told her mother that 1 whole is the same as  $\frac{2}{2}$  and  $\frac{6}{6}$ . Her mother asked why, but Claire couldn't explain. Use a number line and words to help Claire show and explain why

$$1 = \frac{2}{2} = \frac{6}{6}$$
.

The number line has been cut into halves and sixths. It shows that  $\frac{2}{2}$  and  $\frac{6}{6}$  are both located at the same place as 1. This means  $1 = \frac{2}{3} = \frac{6}{6}$ .
