

Name _____

Date _____

Use the RDW process to solve the problem below. Use a letter to represent the unknown.

Twenty packs of fruit snacks come in a box. Each pack weighs 6 ounces. Students eat some. There are 48 ounces of fruit snacks left in the box. How many ounces of fruit snacks did the students eat?

$$20 - 8 = 12$$

They ate 12 packs.

$$6 \times 12 =$$

$$6 \times 10 = 60$$

$$6 \times 2 = 12$$

$$60 + 12 = 72$$

The students ate 72 ounces of fruit snacks.
