

Name _____

Date _____

1. Pat's Potato Farm grew 490 pounds of potatoes. Pat delivered $\frac{3}{7}$ of the potatoes to a vegetable stand. The owner of the vegetable stand delivered $\frac{2}{3}$ of the potatoes he bought to a local grocery store, which packaged half of the potatoes that were delivered into 5-pound bags. How many 5-pound bags did the grocery store package?

$$7 \text{ units} = 490$$

$$1 \text{ unit} = 70$$

These are placed into 5-pound bags.

$$\begin{array}{r} 14 \\ 5 \overline{)70} \\ \underline{5} \\ 20 \\ \underline{20} \\ 0 \end{array}$$

14 bags were made.

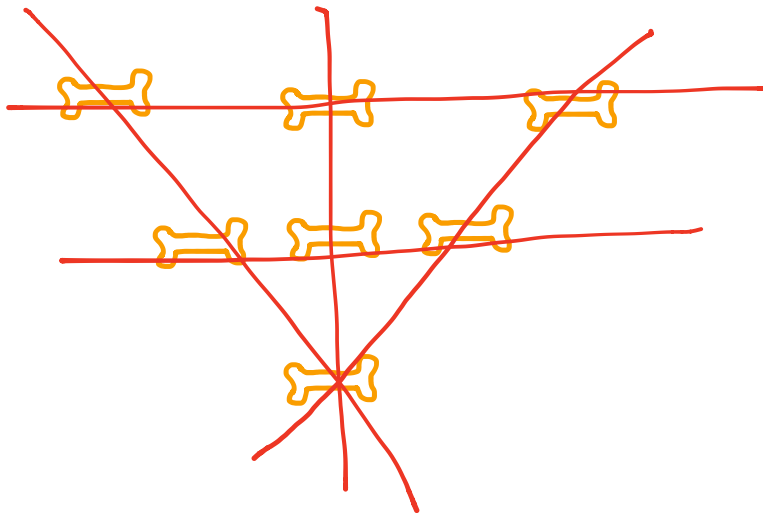

The following problems are for your enjoyment. They are intended to encourage working together and family problem-solving fun. They are not a required element of this homework assignment.

2. Six matchsticks are arranged into an equilateral triangle. How can you arrange them into 4 equilateral triangles without breaking or overlapping any of them? Draw the new shape.

Use the 6 matchsticks to create a pyramid with a triangular base.

3. Kenny's dog, Charlie, is really smart! Last week, Charlie buried 7 bones in all. He buried them in 5 straight lines and put 3 bones in each line. How is this possible? Sketch how Charlie buried the bones.

Other solutions may be possible.
