

Habitats (Grade 1-3)

As we explore the pond, prairie and forest students will look at the adaptations of plants and animals that allow them to survive in each habitat. Using scientific inquiry students will identify the components that make up different habitats and how they interact to make a system.

Grade 1- Science Standards

4. Life Science-

- 1. Structure and Function in Living Systems
 - 1. Living things are diverse with many different observable characteristics.

1.4.1.1.1 Describe and sort animals into groups in many ways, according to their physical characteristics and behaviors.

1.4.2.1.1 Recognize that animals need space, water, food, shelter and air.

2. Interdependence Among Living Systems

1. Natural systems have many components that interact to maintain

the system.

1.4.2.1.2 Describe ways in which an animal's habitat provides for its basic needs.

For example: Compare students' houses with animal habitats.

1.4.3.1.1 Demonstrate an understanding that animals pass through life cycles that

include a beginning, development into adults, reproduction and eventually death.

For example: Use live organisms or pictures to observe the changes that occur during the life cycle of butterflies, meal worms or frogs.

3. Evolution in Living Systems

1. Plants and animals undergo a series of orderly changes during their life cycles.

1.4.3.1.2 Recognize that animals pass through the same life cycle stages as their parents.

Grade 2- Science Standards

4. Life Science-

1. Structure and Function in Living Systems

1. Living things are diverse with many different observable characteristics.

2.4.1.1.1 Describe and sort plants into groups in many ways, according to their physical characteristics and behaviors.

2. Interdependence Among Living Systems

1. Natural systems have many components that interact to maintain the system

2.4.2.1.1 Recognize that plants need space, water, nutrients and air, and that they fulfill these needs in different ways.

3. Evolution in Living Systems

1. Plants and animals undergo a series of orderly changes during their life cycles.

2.4.3.1.1 Describe the characteristics of plants at different stages of their life cycles. *For example*: Use live organisms or pictures to observe the changes that occur during the life cycles

Grade 3- Science Standards

4. Life Science

1. Structure and Function in Living Systems

Living things are diverse with many different characteristics that enable them to grow, reproduce and survive.
3.4.1.1.2 Identify common groups of plants and animals using observable physical characteristics, structures and behaviors.

For example: Sort animals into groups such as mammals and amphibians based on physical characteristics. *Another example:* Sort and identify common Minnesota trees based on leaf/needle characteristics.

3.4.3.2.1 Give examples of likenesses between adults and offspring in plants and

animals that can be inherited or acquired.

For example: Collect samples or pictures that show similarities between adults and their young offspring.

3. Evolution in Living Systems

2. Offspring are generally similar to their parents, but may have variations that can be advantageous or disadvantageous in a particular environment.

3.4.3.2.2 Give examples of differences among individuals that can sometimes give an individual an advantage in survival and reproduction.
