

Grade 3: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives by Domain

Description

Included here are the prerequisite concepts and skills necessary for students to learn grade level content based on the New Jersey Student Learning Standards in mathematics. This tool is intended to support educators in the identification of any gaps in conceptual understanding or skill that might exist in a student's understanding of mathematics standards. The organization of this document mirrors that of the New Jersey Student Learning Standards for mathematics, includes all grade- or course-level standards and the associated student learning objectives, and reflects a grouping of the standards by domain.

The tables are divided into three columns. The first column contains the grade level standard and student learning objectives, which reflect the corresponding concepts and skills in that standard. The second column contains standards from prior grades and the corresponding learning objectives, which reflect prerequisite concepts and skills essential for student attainment of the grade level standard as listed on the left. Given that a single standard may reflect multiple concepts and skills, all learning objectives for a prior grade standard may not be listed. Only those prior grade learning objectives that reflect prerequisite concepts and skills important for attainment of the associated grade level standard is listed. The third column contains the recommendations from [Student Achievement Partners' recommendations](#) (SAP) for the 2020-21 school year regarding preserving or reducing time as compared to a typical academic year.

Content Emphases Key: ■: Major Cluster □: Supporting Cluster ○: Additional Cluster

Note: Double asterisks (**) indicate that the example(s) included within the New Jersey Student Learning Standard may be especially informative when considering the Student Learning Objective.

Grade 3: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

Domain: Operations and Algebraic Thinking

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <i>SAP</i> recommendation to preserve or reduce time in 20-21 as compared to a typical year
<p>■ 3.OA.A.1 Interpret products of whole numbers, e.g., interpret 5×7 as the total number of objects in 5 groups of 7 objects each. For example, describe and/or represent a context in which a total number of objects can be expressed as 5×7.</p> <p>We are learning to/that...</p> <ul style="list-style-type: none"> interpret products of whole numbers in terms of the number of groups and objects** 	<p>▣ 2.OA.C.4 Use addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns; write an equation to express the total as a sum of equal addends.</p> <p>We have learned to/that...</p> <ul style="list-style-type: none"> use repeated addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns write an equation to express the total number of objects arranged in a rectangular array as a sum of equal addends 	<p>No special considerations for curricula well aligned to multiplication and division concepts and problem solving, as detailed in this standard or cluster.</p> <p>Students may need extra support to see row and column structure in arrays of objects.</p> <p>Time spent on instruction and practice should not be reduced</p>
<p>■ 3.OA.A.2 Interpret whole-number quotients of whole numbers, e.g., interpret $56 \div 8$ as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each. For example, describe and/or represent a context in which a number of shares or a number of groups can be expressed as $56 \div 8$.</p>	<p>n/a</p>	<p>No special considerations for curricula well aligned to multiplication and division concepts and problem solving, as detailed in this standard or cluster.</p> <p>Students may need extra support to see row and column structure in arrays of objects.</p> <p>Time spent on instruction and practice should not be reduced</p>

Grade 3: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <i>SAP</i> recommendation to preserve or reduce time in 20-21 as compared to a typical year
<p>We are learning to/that...</p> <ul style="list-style-type: none"> ▪ interpret whole number quotients of whole numbers as the number of objects in each share (or groups) or as the number of shares (or groups) that result from partitioning a total number of objects** 		
<p>■ 3.OA.A.3 Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.</p> <p>We are learning to/that...</p> <ul style="list-style-type: none"> ▪ use multiplication and division within 100 to solve word problems in situations involving: equal groups, arrays and measurement quantities ▪ use drawings and equations with a symbol for the unknown number to represent multiplication and division word problems within 100 	<p>■ 2.OA.C.4 Use addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns; write an equation to express the total as a sum of equal addends.</p> <p>We have learned to/that...</p> <ul style="list-style-type: none"> ▪ use repeated addition to find the total number of objects arranged in rectangular arrays with up to 5 rows and up to 5 columns ▪ write an equation to express the total number of objects arranged in a rectangular array as a sum of equal addends 	<p>No special considerations for curricula well aligned to multiplication and division concepts and problem solving, as detailed in this standard or cluster.</p> <p>Students may need extra support to see row and column structure in arrays of objects.</p> <p>Time spent on instruction and practice should not be reduced</p>

Grade 3: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <i>SAP</i> recommendation to preserve or reduce time in 20-21 as compared to a typical year
<p>■ 3.OA.A.4 Determine the unknown whole number in a multiplication or division equation relating three whole numbers. For example, determine the unknown number that makes the equation true in each of the equations $8 \times ? = 48$, $5 = \heartsuit \div 3$, $6 \times 6 = ?$.</p> <p>We are learning to/that...</p> <ul style="list-style-type: none"> determine the unknown whole number in a multiplication or division equation relating three whole numbers ** 	<p>n/a</p>	<p>No special considerations for curricula well aligned to multiplication and division concepts and problem solving, as detailed in this standard or cluster.</p> <p>Students may need extra support to see row and column structure in arrays of objects.</p> <p>Time spent on instruction and practice should not be reduced</p>
<p>■ 3.OA.B.5 Apply properties of operations as strategies to multiply and divide. <i>Examples:</i> If $6 \times 4 = 24$ is known, then $4 \times 6 = 24$ is also known. (Commutative property of multiplication.) $3 \times 5 \times 2$ can be found by $3 \times 5 = 15$, then $15 \times 2 = 30$, or by $5 \times 2 = 10$, then $3 \times 10 = 30$. (Associative property of multiplication.) Knowing that $8 \times 5 = 40$ and $8 \times 2 = 16$, one can find 8×7 as $8 \times (5 + 2) = (8 \times 5) + (8 \times 2) = 40 + 16 = 56$. (Distributive property).</p> <p>We are learning to/that...</p> <ul style="list-style-type: none"> apply properties of operations (commutative property) as strategies to multiply apply the distributive property as a strategy to multiply 	<p>n/a</p>	<p><i>Incorporate</i> additional practice with double digit sums (2.NBT.B.5) to support the grade 3 multiplication work with properties of operations, especially the distributive property.</p>

Grade 3: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <i>SAP</i> recommendation to preserve or reduce time in 20-21 as compared to a typical year
<ul style="list-style-type: none"> ▪ apply properties of operations (associative property) as strategies to multiply 		
<p>■ 3.OA.B.6 Understand division as an unknown-factor problem. For example, find $32 \div 8$ by finding the number that makes 32 when multiplied by 8.</p> <p>We are learning to/that...</p> <ul style="list-style-type: none"> ▪ a related multiplication problem with an unknown factor can be used to solve a division problem 	n/a	<p><i>Incorporate</i> additional practice with double digit sums (2.NBT.B.5) to support the grade 3 multiplication work with properties of operations, especially the distributive property.</p>
<p>■ 3.OA.C.7 Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 = 40$, one knows $40 \div 5 = 8$) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.</p> <p>We are learning to/that...</p> <ul style="list-style-type: none"> ▪ multiply and divide within 100 using strategies such as: relationship between multiplication and division or properties of operations with accuracy and efficiency ▪ know from memory all products of two one-digit numbers 	n/a	<p><i>Incorporate</i> additional practice with double digit sums (2.NBT.B.5) to support the grade 3 multiplication work with properties of operations, especially the distributive property.</p>

Grade 3: New Jersey Student Learning Standards for Mathematics - Prerequisite Standards and Learning Objectives

Standard and Student Learning Objectives	Previous Grade(s) Standards and Student Learning Objectives	Instructional Considerations <i>SAP</i> recommendation to preserve or reduce time in 20-21 as compared to a typical year
<p>■ 3.OA.D.8 Solve two-step word problems using the four operations. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.</p> <p>We are learning to/that...</p> <ul style="list-style-type: none"> ▪ solve simple two-step word problems using the four operations ▪ represent two-step word problems using equations with a letter standing for the unknown quantity ▪ assess the reasonableness of answers in two-step word problems using mental computation and estimation strategies including rounding 	<p>■ 2.OA.A.1 Use addition and subtraction within 100 to solve one- and two-step word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.</p> <p>We have learned to/that...</p> <ul style="list-style-type: none"> ▪ represent a word problem using drawings and equations using a symbol for the unknown ▪ solve one and two-step addition and subtraction word problems within 100 involving situations of adding to, taking from, putting together, taking apart, and comparing 	<p>No special considerations for curricula well aligned to two step word problems using the four operations, as detailed in this standard/cluster.</p> <p>Time spent on instruction and practice should not be reduced.</p>
<p>■ 3.OA.D.9 Identify arithmetic patterns (including patterns in the addition table or multiplication table), and explain them using properties of operations. For example, observe that 4 times a number is always even, and explain why 4 times a number can be decomposed into two equal addends.</p> <p>We are learning to/that...</p> <ul style="list-style-type: none"> ▪ identify arithmetic patterns, including patterns in the addition table or 	<p>■ 2.OA.C.3 Determine whether a group of objects (up to 20) has an odd or even number of members, e.g., by pairing objects or counting them by 2s; write an equation to express an even number as a sum of two equal addends.</p> <p>We have learned to/that...</p> <ul style="list-style-type: none"> ▪ determine whether a group of objects up to 20 is odd or even (e.g., by pairing objects, counting them by 2s) 	<p><i>Eliminate</i> lessons or problems on arithmetic patterns</p> <p>Note: While this standard is part of the Major Work of the Grade, during the 2020-21 school year, it is recommended that it receive lighter treatment.</p>
