Grade Level: 3

Module Title: Measure Mania

Conceptual Lens: Measurement

### Operations

- Addition
- Subtraction
- Multiplication
- Division
- Commutative Property
- Associative Property
- Distributive Property
- Word Problems

### Measurement

- Time
- Length (Distance)
- Mass/Weight
- Volume/Capacity
- Perimeter
- Area
- Units
- Square units
- Liters
- Grams
- Inch
- Half-inch
- Quarter- inch

**Unit Title:**  
**Measure Mania**

### Geometry

- Triangles
- Quadrilaterals
- Square
- Rectangle
- Rhombus
- Trapezoid
- Parallelograms
- Attributes
- Sides
- Angles
- Circles
- Composite

### Data

- Line Plot
- Scaled Bar Graphs

Module Title: Measure Mania

Conceptual Lens: Measurement

**Unit Overview:** In this module students will develop understandings of geometric figures by focusing on identification and descriptions of figures based on geometric properties. Students will understand that shapes in different categories may share attributes and those attributes can define a larger category. Rhombi, rectangles, and squares have four sides and are all called quadrilaterals. Students will partition shapes into equal parts of halves, fourths, and eights and recognize the partitioned parts have the same area. Students will recognize area as an attribute of 2-dimensional regions and find the perimeter of polygons using addition. Data will be collected to create bar graphs, pictographs, and line plots. In this module, students will tell and write time to the nearest minute and solve elapsed time. Students will also explore units of mass and volume.

**Technology Integration:** (What skills do teachers or students need to use this? How much knowledge or familiarity with the use of the Internet and tools are necessary?)

Teachers should be proficient utilizing interactive whiteboard technology and internet resources such as ThinkCentral.com and other websites that provide interactive math tools. Also, teachers should demonstrate knowledge of administering online testing, interpreting data, and selecting computer based activities for students.

Standards addressed in this unit:

New	3.G.2						
	3.MD.2	3.MD.4	3.MD.5	3.MD.6	3.MD.7	3.MD.8	
Repeat	3.OA.3	3.OA.7					
	3.MD.1	3.MD.3

 Mathematics Concept-Based Curriculum  
 Grade 3 -Module 3  
 2013-2014

Generalizations	Guiding Questions
	<i>(F = factual; C = conceptual; P = philosophical)</i>
1. Solving elapsed time problems involves composing and decomposing units of hours, minutes, and seconds.	<ul style="list-style-type: none"> <li>a. What does it mean to tell time to the nearest minute? (C)</li> <li>b. How many minutes are in an hour? Seconds in a minute? (F)</li> <li>c. What strategies can I use to measure time intervals in minutes? (F)</li> <li>d. How can hours be decomposed to help measure time and solve elapsed time problems? (F)</li> <li>e. How can I number lines to determine how much time has passed between two events? (F)</li> <li>f. When do you regroup in problems involving time? (F)</li> <li>g. What part does elapsed time play in our daily life? (P)</li> <li>h. How can we determine the amount of time that passes between two events? (F)</li> <li>i. Why do we measure time? (P)</li> <li>j. How do you read an analog clock to the nearest minute? (C)</li> <li>k. What do the revolutions of the second and minute hands communicate? (C)</li> <li>l. How are addition and subtraction problems about time similar/different from addition and subtraction problems not involving time? (C)</li> </ul>
2. Shapes can be assigned to more than one category based on their attributes.	<ul style="list-style-type: none"> <li>a. What are attributes? (F)</li> <li>b. What makes shapes different from each other? (F)</li> <li>c. How can you group certain shapes together? Why do they belong together? (F)</li> <li>d. How can a shape be described? (F)</li> <li>e. What attributes are typically used to categorize shapes? (F)</li> <li>f. Why do some shapes belong in more than one category? (C)</li> <li>g. Which shapes have parallel sides? (F)</li> <li>h. Which shapes have right angles? (F)</li> <li>i. How do parallel and perpendicular sides help to classify shapes? (C)</li> <li>j. What is a quadrilateral? (F)</li> <li>k. Which quadrilaterals have multiple names? (F)</li> <li>l. How do you know if a shape is a quadrilateral? (F)</li> <li>m. How can shapes share attributes? (F)</li> </ul>
3. Shapes can be partitioned into equal fractional parts.	<ul style="list-style-type: none"> <li>a. What is partitioning? (F)</li> <li>b. How do you represent an equal part of a shape using a unit fraction? (C)</li> <li>c. How does the area in one section of an equally partitioned shape compare to the areas of the other sections? (C)</li> <li>d. What is a unit fraction? (F)</li> <li>e. How can you partition this shape in ___ equal parts? (F)</li> <li>f. How does partitioning a whole into equal parts result in fractions? (C)</li> <li>g. Why and when do we need to break wholes into parts? (C)</li> <li>h. How does the number of equal parts of a figure relate to the fraction? (C)</li> <li>i. How does the area of the fractional part change when the area of the whole changes? (C)</li> </ul>
<p>*Focus is on equal areas and naming unit fractions.          Fractions will be explored in depth in Module 4.</p>

 Mathematics Concept-Based Curriculum  
 Grade 3 -Module 3  
 2013-2014

<p>4. Standard units provide people with a common understanding of the quantities involved when measuring mass and volume.</p>	<ul style="list-style-type: none"> <li>a. What would happen if we did not have standard units of measurement for volume or mass? (P)</li> <li>b. What is a standard unit? (F)</li> <li>c. Why are units important in measurement? (C)</li> <li>d. What does liquid volume/mass of an object tell me? (C)</li> <li>e. What tools are used to measure volume/mass? (F)</li> <li>f. What are some ways I can measure volume/ mass? (F)</li> <li>g. What strategies can I use to help me solve problems involving volume/mass?(C)</li> <li>h. How are benchmarks used to measure volume/mass? (C)</li> <li>i. What estimation strategies are used in measurement? (C)</li> <li>j. How can measuring one object with different size units emphasize the relationship between smaller units to larger units in the same system? (C)</li> </ul>
<p>5. Square units represent a form of measurement used to determine the area of a rectangle.</p>	<ul style="list-style-type: none"> <li>a. What methods can I use to determine area?(F)</li> <li>b. What operations are involved when solving area problems? (F)</li> <li>c. Why is it important to know about area in real life? (C)</li> <li>d. How would decomposing a rectilinear figure into two rectangles be helpful in finding the area? (C)</li> <li>e. How are area and perimeter of a shape related? (C)</li> <li>f. How many different rectangles can you make with an area of ___ units?(F)</li> <li>g. How can an array be used to prove that the area of a rectangle equals length times width? (C)</li> <li>h. How can I use what I know about the relationship between multiplication and division to determine the missing side of a rectangle when given the area and one side? (C)</li> </ul>
<p>6. Linear measurement to fractional units results in more precise measurements.</p>	<ul style="list-style-type: none"> <li>a. What three unit fractions are represented on this ruler? (F)</li> <li>b. How do smaller units on a ruler lead to more precise measurements? (C)</li> <li>c. How are rulers and number lines alike? (C)</li> <li>d. Why do we measure in fractional units? (C)</li> <li>e. What methods can I use to determine perimeter? (C)</li> <li>f. Why is it important to know about perimeter in real life? (C)</li> </ul>
<p>7. Pictographs, bar graphs, and line plots represent sets of data used in problem solving.</p>	<ul style="list-style-type: none"> <li>a. What is data? (F)</li> <li>b. Do data displays simply help us understand information, or can they lead/mislead us to particular conclusions? (C)</li> <li>c. Why do we use graphs to represent data? (C)</li> <li>d. How does interpreting a graph help you learn more about the data collected? (C)</li> <li>e. What can we do with the data we collect and display? (C)</li> <li>f. How can I demonstrate my understanding of the data? (C)</li> <li>g. Why is it sometimes necessary to use skip counting increments on a given scale? (C)</li> <li>h. How do I decide which increments to use for my scale? (F)</li> </ul>

2013-2014

square ft, and improvised units).

3.MD.7.

Relate area to the operations of multiplication and addition.

- a. Find the area of a rectangle with whole-number side lengths by tiling it, and show that the area is the same as would be found by multiplying the side lengths.
- b. Multiply side lengths to find areas of rectangles with whole-number side lengths in the context of solving real world and mathematical problems, and represent whole-number products as rectangular areas in mathematical reasoning.
- c. Use tiling to show in a concrete case that the area of a rectangle with whole-number side lengths  $a$  and  $b + c$  is the sum of  $a \times b$  and  $a \times c$ . Use area models to represent the distributive property in mathematical reasoning.
- d. Recognize area as additive. Find areas of rectilinear figures by decomposing them into non-overlapping rectangles and adding the areas of the non-overlapping parts, applying this technique to solve real world problems.

3.MD.8

Solve real world and mathematical problems involving perimeters of polygons, including finding the perimeter given the side lengths, finding an unknown side length, and exhibiting rectangles with the same perimeter and different areas or with the same area and different perimeters.

Suggested Timeline	Learning Experiences	Assessments	Differentiation (For Support and Extension)	Resources
Days 26-32	<p><b>Measure area in square units using concrete objects, (i.e. fraction circles, paper cut outs, color tiles, etc...) Then, move to pictorial representations, (i.e. virtual manipulatives, drawings, etc...) (Generalization 5) (3.MD.5 ,3.MD.6)</b></p> <p>Using a geoboard, have students make a one-by-one square. Explain that this square has an area of one square unit. Next, have students make a shape that has an area of 2 square units. Move on to shapes with larger areas.</p>  <p>Have students use color tiles to measure the area of a given rectangle. Record findings using pictures, numbers and words.</p> <p>Give students a bag of square colored tiles. Have students build a given area. Note that different side lengths may have the same area.</p>  <p>Using graph paper, have students draw a shape with an area of ___ square units.</p> <p><b>** All learning experiences allow for student discourse.</b></p>	<p>Teacher Observation</p> <p>Teacher Created Common Formative Assessments</p> <p><u>Math Expressions</u>  <i>Formative Assessment:</i>  <i>Check Understanding</i>  <i>Quick Quiz</i>  <i>Unit Tests</i></p>	<p><u>Math Expressions</u></p> <p>Unit 8: refer to <i>Differentiated Instruction</i> pages in T.E. or on Think Central</p> <ul style="list-style-type: none"> <li>• RTI</li> <li>• Challenge Cards</li> </ul> <p>Intervention: <i>RTI Intervention Books</i></p> <p>Extension: <i>Online Destination Math</i></p>	<p><a href="#">Grade 3 Unpacked Standards</a></p> <p><a href="#">ThinkCentral</a></p> <p><a href="#">LearnZillion Video Lessons: Area Videos</a>  <a href="#">Area Videos 2</a></p> <p><u>Math Expressions</u> ©</p> <ul style="list-style-type: none"> <li>• Unit 8</li> </ul> <p><u>Hands-On Standards</u>©    Common Core Edition, Grade 3    ETA hand2mind@2012</p> <p>Module 3 Lessons (See Attached)</p> <p><i>Oops! I'm decomposing!</i>  <i>Multiplication With Base-Ten Blocks</i>  <i>How Big is a Desk?</i></p>
