#### Sequenced Units for the Common Core State Standards in Mathematics Grade 8

Prior to Grade 8, students have written and interpreted expressions, solved equations and inequalities, explored quantitative relationships between dependent and independent variables, and solved problems involving area, surface area, and volume. Students have also begun to develop an understanding of statistical thinking. The Grade 8 course outlined in this document begins with congruence transformations of the coordinate plane, followed by exploration of similarity transformations, which contribute to students' conceptual understanding of slope. Students apply their previous understandings of ratio and proportional reasoning to the study of linear functions, equations, and systems, including a deep understanding of slope. They explore negative integer exponents and irrational numbers, and they deepen their understanding of geometric concepts by investigating and applying the Pythagorean Theorem.

This document reflects our current thinking related to the intent of the Common Core State Standards for Mathematics (CCSSM) and assumes 160 days for instruction, divided among 14 units. The number of days suggested for each unit assumes 45-minute class periods and is included to convey how instructional time should be balanced across the year. The units are sequenced in a way that we believe best develops and connects the mathematical content described in the CCSSM; however, the order of the standards included in any unit does not imply a sequence of content within that unit. Some standards may be revisited several times during the course; others may be only partially addressed in different units, depending on the focus of the unit. Strikethroughs in the text of the standards are used in some cases in an attempt to convey that focus, and comments are included throughout the document to clarify and provide additional background for each unit.

Throughout Grade 8, students should continue to develop proficiency with the Common Core's eight Standards for Mathematical Practice:

- 1. Make sense of problems and persevere in solving them.
- 2. Reason abstractly and quantitatively.
- 3. Construct viable arguments and critique the reasoning of others.
- 4. Model with mathematics.

- S. Use appropriate tools strategically.
- 6. Attend to precision.
- 7. Look for and make use of structure.
- 8. Look for and express regularity in repeated reasoning.

These practices should become the natural way in which students come to understand and do mathematics. While, depending on the content to be understood or on the problem to be solved, any practice might be brought to bear, some practices may prove more useful than others. Opportunities for highlighting certain practices are indicated in different units in this document, but this highlighting should not be interpreted to mean that other practices should be neglected in those units.

When using this document to help in planning your district's instructional program, you will also need to refer to the CCSSM document, relevant progressions documents for the CCSSM, and the appropriate assessment consortium framework.

| ·                                    | is as students explore the three congruence transform |                | <del></del>                  |

This unit provides an introduction to transformations as students explore the three congruence transformations: rotations, reflections, and translations. This unit builds on students' work in prior grades with parallel lines, angles, and symmetry in geometric figures (4.G.A.1, 4.G.A.3), and the coordinate plane (G.NS.C.G). In units 2 and 3, students build upon these foundations as they investigate combinations of translations that result in congruence or similarity transformations. This work with congruence and similarity provides support for development of the formal definition of slope in unit 7.

|   | d for both linear and non-linear functions. Students in distribution of the following students of the following students in the following students of the following students o |   | aically, graphically,        |
| Common Core State Standards for Mathematical Content  Functions — 8.F  A. Define, evaluate, and compare functions.  1. Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output.  **NOTE: **IFunction notation is not required in Grade 8.** | <ul> <li>8.F.1.1 Identify the domain and range of a relation</li> <li>8.F.1.2 Determine if a graph represents a function</li> <li>8.F.1.3 Determine if a set of points represents a function</li> <li>8.F.1.4 Calculate the y-value for an equation when given the x-value</li> <li>8.F.1.5 Create a table for an equation</li> <li>8.F.1.6 Determine if a table represents a function</li> <li>8.F.1.7 Represent a function in the form of ordered pairs, mapping, graph, or listing</li> <li>8.F.1.8 Graph functions in a coordinate plane</li> <li>8.F.1.9 Read inputs and outputs from a graph of a function on a coordinate plane</li> </ul>  | Understanding how functions model (MP.4) relationships requires that students reason abstractly and |                              |
| 2. Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions). For example, given a linear function represented by a table of values and a linear function represented by an algebraic expression, determine which function has the greater rate of change.                         | 8.F.2.1 Find the rate of change (slope) of a graph 8.F.2.2 Find the rate of change (slope) of a table 8.F.2.3 Find the slope of an equation 8.F.2.4 Compare two functions represented in the same way. (algebraically, graphically, numerically in tables, or by verbal description). 8.F.2.5 Compare two functions represented  | quantitatively (MP.2) while looking for and making use of structure (MP.7).                         |                              |

|  |                               | differently (algebraically, graphically,   |  |
|--|-------------------------------|--|--|
|  |                               | numerically in tables, or by verbal  |  |
|  |                               | description).  |  |
|  | 8.F.2.6                       | Compare functions represented in   |  |
|  |                               | different forms to determine which has   |  |
|  |                               | the greater rate of change (slope)   |  |
| 3. Interpret the equation $y = mx + b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear. For example, the function $A = s^2$ giving the area of a square as a function of its side length is not linear because its graph contains the points $(1,1)$ , $(2,4)$ and $(3,9)$ , which are not on a straight line. | 8.F.3.1<br>8.F.3.2<br>8.F.3.3 | Explain that y=mx+b is a linear function. Recognize that non-linear is not straight Use graphs to categorize functions as linear or non-linear Use equations to categorize functions as linear or non-linear |  |
|  | 8.F.3.5                       | Identify and prove functions that are  |  |
|  |                               | non-linear.  |  |
|  | 8.F.3.6                       | Give examples of functions that are non-linear.  |  |
| B. Use functions to model relationships between  |                               |  |  |
| quantities.  5. Describe qualitatively the functional relationship between two quantities by   | 8.F.5.1                       | Identify equations as linear or nonlinear.   |  |
| analyzing a graph (e.g., where the   | 8.F.5.2                       | Explain how slope changes when given a   |  |
| function is increasing or decreasing,<br>linear or nonlinear). Sketch a graph that   | 8.F.5.3                       | graph. Sketch a graph when given the   |  |
| exhibits the qualitative features of a   | 8.1.5.5                       | description of the slope   |  |
| function that has been described   | 8.F.5.4                       | Evaluate and describe properties based   |  |
| verbally.  | 0.1.5.4                       | on a given graph   |  |
|  | 8.F.5.5                       | Analyze the graph for a functional   |  |
| Common Core State Standards for  | 0.1.5.5                       | relationships  |  |
| Mathematical Practice  | 8.F.5.6                       | Create a graph for a functional  |  |
| 2. Reason abstractly and quantitatively.   |                               | relationships  |  |
| 4. Model with mathematics  | 8.F.5.7                       | Sketch a graph by analyzing a situation  |  |
| 7. Look for and make use of structure.   |                               | that has been described verbally   |  |

|   | Grade 8                                       |  |                                  |
