

Kuder Navigator Power Point Presentation

March 14, 2012

In previous lessons we have assessed your strengths, weaknesses and attitudes towards possible careers. You will produce a six-slide PowerPoint Presentation to summarize your findings based on the following outline. (60 points) Make sure to use transitions between each slide.

Slide 1, Introductory Slide (10 points)

Please type your name, period, date and the title of the presentation. Place a picture of your chosen career on the page, and link it to the website of a possible place of employment.

Slide 2, Career Options (10 points)

Place the titles of the three careers recommended by Kuder. Using bullet points provide a brief description of the tasks and conditions for each of the positions. Take a picture off the Internet for each of the positions, and animate each to come on to the page.

Slides 3-5, Salary Analysis (10 points)

For each of the 3 careers, using a separate page for each, show the median salaries for California, the national average, and another state. Also show the probable growth rate until 2018. Clearly label each in bullet points. Please animate each of the statistics as they enter the presentation.

Slide 6, Personal Opinion (10 points)

For each of the careers recommended by Kuder, *explain* using bullet points, whether you find each career acceptable, i.e. is this something you see yourself doing as a career? Also, go to *animation.com* to include an animation to your presentation. Create a button on the last slide so that the presentation returns to the first slide when the button is pressed.
