
GRADE 3

Password Power-Up

PRIVACY & SECURITY

We care about
everyone's privacy.

How can a strong password help protect your privacy?

OVERVIEW

Stronger, more secure online passwords are a good idea for everyone. But how can we help kids create better passwords and actually remember them? Use the tips in this lesson to help kids make passwords that are both secure and memorable.

Students will be able to:

- Define the term "password" and describe a password's purpose.
- Understand why a strong password is important.
- Practice creating a memorable and strong password.

Lesson Snapshot

Estimated time: 45 mins.

Warm Up:	Pssst ... What's a Password?	10 mins.
Evaluate:	Uh-Oh! If ... Then ...	20 mins.
Create:	Power Up Your Password	10 mins.
Wrap Up:	Password Tips Notes	5 mins.

Key Standards Supported

What You'll Need

Spanish-language student and family resources available soon!

- Writing paper or notebooks
- **Lesson Slides**
- Student Handout: If...Then...Scenarios
 - **Student Version**
 - **Teacher Version**
- Lesson Quiz
 - **Student Version**
 - **Teacher Version**

Take-home resources

- **Family Tips**
 - **Family Activities**
-

LESSON PLAN

Key Vocabulary:

password

a secret string of letters, symbols, and numbers that you can use to restrict who can access something digital

phrase

a group of words that go together and are easy to remember

symbol

a character other than a number or letter, such as #, !, or @.

username

a name you create to sign into a website, app, or game

Warm Up: Pssst ... What's a Password?

10 mins.

1. **Ask:** *What is something in your life that you take steps to protect? Why and how do you protect it? (Slide 4)*

Have students think-pair-share, and then call on students to share out. Examples might include *hiding a diary, using a bike lock, keeping a toy in a safe place*, etc. Clarify that one of the ways people protect something is by restricting who can access it.

2. **Ask:** *Let's think about when we use devices, like a phone or computer. How do you limit who can access something that you want to protect, and why would you limit access?*

Examples might include password-protection, device-lock, fingerprint scanner, not letting others use the device.

- Say:** *One of the most common ways to protect your devices and information online is by using a password. A **password** is a secret string of letters, symbols, and numbers that you can use to restrict who can access something digital. Some passwords, however, are stronger than others because they are harder for someone to figure out. Let's investigate why strong passwords are important and how you can make sure yours are strong. (Slide 5)*
-

Evaluate: **Uh-Oh! If ... Then ...**

20 mins.

- Distribute If ... Then Scenarios Student Handout.** Tell students that they will be doing a jigsaw activity to understand WHY passwords are important.
- Divide** the class into five groups and tell students this is their "home" group. Call on a student to read the handout directions aloud. **(Slide 6)**
- Assign** each group one of the scenarios from the handout. Allow groups to work for five to seven minutes.
- Re-divide** the class into new groups so that each group includes at least one student from each scenario (1, 2, 3, 4, and 5). If necessary, there can be more than one person from a particular "home" group in an "expert" group. Allow five to seven minutes for each "expert" to present while the rest of the group takes notes. **(Slide 6)**
- Reconvene** and ask: *Based on these scenarios, why do you think it's important to have a strong password? Take turns sharing your idea with your partner.* Allow one minute to pair-share.

Invite students to share out their answers. If necessary, prompt students to refer directly to the scenarios and to the consequences that would happen if someone's password was compromised. Examples could include loss of money, people knowing your private information, identity theft, and other unknown future consequences.

Create: **Power Up Your Password**

10 mins.

- Say:** *The consequences we just talked about might seem scary. But there is something you can do to make sure no one can ever guess your password. Here are some important steps to power up your password.*
- Distribute** and project the **Power Up Your Password Student Handout**. *Say: One way to make a strong password is to start with a memorable phrase. A **phrase** is a group of words that go together and are easy to remember. We're going to do a practice round together using the phrase "There's no way I'm kissing a frog." So we've already completed step one, which is to come up with a phrase. (Slide 7)*
- Invite** a student to read step two. Ask: *What word would our example phrase make?* Invite a student to answer and add "tnwikaf" on the projected handout.
- Repeat** steps three through five: reading the step aloud, calling on students to answer, and completing the "Practice Round" section of the handout. Student answers will vary as students will choose to capitalize different letters and insert different numbers. If necessary, clarify that students can insert numbers anywhere in the password.
- Say:** *Now you will follow these steps to come up with a password of your own. Work independently to complete the "Your Turn" section of the handout.* Allow students five minutes to complete the handout.

Wrap Up: **Password Tips Notes**

5 mins.

1. **Project** the Password Tips and read each one aloud. Direct students to fill in the blanks on their handout as you read them. For the last tip, clarify that a **symbol** is a character other than a number or letter, such as #, !, or @.
(Slide 8)
 2. **Say:** *As you get older, having a strong password will become even more important. Passwords will help you protect your social networking profiles when you are in high school, keep your grades private when you are in college, and protect your bank accounts and online store accounts when you are an adult.*
 3. **Have** students complete the **Lesson Quiz**. Send home the **Family Activity** and **Family Tips** sheets.
