Tuesday

A rocket is launched from a platform.

Its height (in meters), x seconds after the launch, is modeled by

$$h(x) = -4(x + 2)(x - 18)$$

What is the height of the rocket at the time of launch? $h(0) = -4 \cdot -9 \cdot 2 = -8$

How many seconds after launch will the rocket hit the ground? $x + 2 = 0 \Rightarrow x = -2$ or $x - 18 = 0 \Rightarrow x = 18$ (18 seconds)

How many seconds after being launched will the rocket reach its maximum height?

What is the maximum height that the rocket will reach?

$$h(8) = -4(8 + 2)(8 - 18) = -4(10)(-10) = 400$$

Student Name:

Wednesday

1. $y = x^2 - 2x - 5$
 $X = \frac{-(-2)}{2(1)} = 1$

x	y
-1	-2
0	-5
1	-6
2	-5
3	-2

Axis of Symmetry: $X=1$ Vertex: $(1, -6)$
 Domain: \mathbb{R} Range: $Y \geq -6$

6. $y = -3(x-1)^2$

x	y
-1	-12
0	-3
1	0
2	-3
3	-12

Axis of Symmetry: $X=1$ Vertex: $(1, 0)$
 Domain: \mathbb{R} Range: $Y \leq 0$

Quadratic Functions

Standard Form
 $y = ax^2 + bx + c$
 Example 1: $f(x) = -x^2 + 2x + 3$
 $a = -1$ $b = 2$ $c = 3$

- Axis of Symmetry: $X=1$
- Use the formula
- Vertex: $(1, 4)$
- If you know the axis of symmetry, just plug it back into the function to find y
- Y intercept: $(0, 3)$
- The y intercept is when $x=0$

Vertex Form
 $y = a(x-h)^2 + k$
 Example 2: $f(x) = 2(x+3)^2 - 1$

- Axis of Symmetry: $X = -3$
- If you know the vertex, you also know the axis of symmetry
- Vertex: $(-3, -1)$
- Since vertex form is $-h$, make sure to flip the sign for the x-coordinate

Factored Form
 $y = a(x-p)(x-q)$
 Example 3: $f(x) = (x-1)(x-4)$

- Zeros: $(1, 0)$ & $(4, 0)$
- Axis of Symmetry: $X=3$
- Halfway between the zeros
- Vertex: $(3, -1)$
- If you know the A.O.S., you already know the x-coordinate

EASY TO FIND THE AXIS OF SYMMETRY
 $X = \frac{-b}{2a}$

EASY TO FIND THE VERTEX AT
 (h, k)

EASY TO FIND THE ZEROS AT
 $x+p = 0$ & $x+q = 0$

Thursday

2. $y = -x^2 + 10x - 28$
 $X = \frac{-10}{2(-1)} = 5$

x	y
3	-1
4	-4
5	-3
6	-4
7	-1

Axis of Symmetry: $X=5$ Vertex: $(5, -3)$
 Domain: \mathbb{R} Range: $Y \leq -3$

5. $y = (x+3)^2 - 8$

x	y
-5	-4
-4	-7
-3	-8
-2	-7
-1	-4

Axis of Symmetry: $X=-3$ Vertex: $(-3, -8)$
 Domain: \mathbb{R} Range: $Y \geq -8$

Quadratic Functions can be written in three different forms.

Each form provides useful information about the quadratic function.

Friday

To find the zeros of the function, we need to solve the equation $g(r) = 0$. We can do that by factoring $g(r)$.

$$r^2 - 6r - 55 = 0$$

$$(r - 11)(r + 5) = 0$$

$$r - 11 = 0 \text{ or } r + 5 = 0$$

$$r = 11 \text{ or } r = -5$$

There are many ways to find the vertex. We will do it by using the fact that the r -coordinate of the vertex is exactly between the two zeros.

$$\text{vertex's } r\text{-coordinate} = \frac{(11) + (-5)}{2}$$

$$= 3$$

Now we can find the vertex's y -coordinate by evaluating $g(3)$:

$$g(3) = (3)^2 - 6(3) - 55$$

$$= 9 - 18 - 55$$

$$= -64$$

In conclusion,

smaller $r = -5$

larger $r = 11$

The vertex of the parabolas is at

$$(3, -64)$$

 worksheet you turn in.**

Monday

1.) Graph the equation.

$$y = -2(x + 5)^2 + 4$$

Parent Function

Transformation Function

x	y

x	y
-5	4

Graph

Tuesday

1.) An object is launched from a platform.

Its height (in meters), x seconds after the launch, is modeled by:

$$h(x) = -5(x - 4)^2 + 180$$

What is the height of the object at the time of launch? How do you know?

2.) A hovercraft takes off from a platform.

Its height (in meters), x seconds after the launch, is modeled by:

$$h(x) = -3(x - 3)^2 + 180$$

What is the height of the hovercraft at the time of takeoff? How do you know?

3.) (x)Graph the equation.

$$y = 3(x + 1)^2 - 2$$

3.) Amir stands on a balcony and throws a ball to his dog, who is at ground level.

The ball's height (in meters above the ground), x seconds after Amir threw it, is modeled by:

$$h(x) = -(x - 2)^2 + 16$$

What is the height of the ball at the time it is thrown? How do you know?

4.) Graph the equation.

$$y = 3x^2 + 1$$

4.) The population in a certain part of the ocean (in thousands of fish) as a function of the water's temperature (in degrees Celsius) is modeled by:

$$P(x) = -2(x - 9)^2 + 200$$

What is the maximum number of fish? How do you know?

5.) Graph the equation.

$$y = 2(x - 4)^2 + 5$$

5.) The number of mosquitoes in Minneapolis, Minnesota (in millions of mosquitoes) as a function of rainfall (in centimeters) is modeled by:

$$m(x) = -(x - 5)^2 + 25$$

How many centimeters of rainfall will produce the maximum number of mosquitoes? How do you know?

6.) Graph the equation.

$$f(x) = -3(x - 1)^2 + 1$$

7.) Graph the equation.

$$y = -1/2(x + 2)^2 - 4$$

8.) Graph the equation.

$$g(x) = \frac{1}{3}(x - 6)^2 + 1$$

Student Name:
 Teacher Name: **De La Mora**
 Class Name/Subject: **Algebra 1**
 Period:
 Assignment Week #: **4**

Complete all work on a separate sheet of paper. **Show all work.** Include the heading provided on each worksheet you turn in.

Wednesday/Thursday

Quiz #1

- 1.) A certain company's main source of income is a mobile app. The company's annual profit (in millions of dollars) as a function of the app's price (in dollars) is modeled by:

$$P(x) = -2(x - 3)(x - 11)$$

What would be the company's profit if the app price is 0 dollars?

- 2.) Graph the function. $h(x) = -4(x - 3)(x - 1)$
 3.) Identify the vertex and the axis of symmetry.
 4.) Solve for x.

$$(x - 7)(-4x - 2) = 0$$

- 5.) Sarah kicked a ball in the air. The function f models the height of the ball (in meters) as a function of time (in seconds) after Sarah kicked it. **Which of these statements are true?**

- a. The ball moved upwards for about 3.5 sec.
 b. The ball started moving upwards after about 1.75 sec.
 c. The ball hit the ground after about 3.5 sec.
 d. The ball hit the ground after about 1.75 sec.

Quiz #2

- 1.) Find the zeros of the function.
 $f(x) = (x + 6)^2 - 49$
 2.) Find the zeros of the function.
 $g(x) = -10x^2 + 490$
 3.) The fish population in a certain part of the ocean (in thousands of fish) as a function of the water's temperature (in degrees Celsius) is modeled by:

$$P(x) = -2(x - 9)^2 + 400$$

What is the maximum number of fish?

- 4.) Tara solved a quadratic equation. Her work is shown below, with Step 2 missing. What could Tara have written as the result from STEP 2?

$$2(x - 3)^2 + 6 = 14$$

$$2(x - 3)^2 = 8 \quad \text{Step 1}$$

Step 2

$$x - 3 = \pm 2 \quad \text{Step 3}$$

$$x = 1 \text{ or } x = 5 \quad \text{Step 4}$$

- 5.) Graph the function. $g(x) = 2(x - 2)^2 + 2$

Friday

- 1.) The function f is given in three equivalent forms. Which form most quickly reveals the y-intercept? How do you know?

a.) $f(x) = -3(x - 2)^2 + 27$

b.) $f(x) = -3x^2 + 12x + 15$

c.) $f(x) = -3(x + 1)(x - 5)$

What is the y-intercept?

- 2.) The function m is given in three equivalent forms. Which form most quickly reveals the vertex?

a.) $m(x) = 2(x + 4)^2 - 8$

b.) $m(x) = 2(x + 6)(x + 2)$

c.) $m(x) = 2x^2 + 16x + 24$

What is the vertex?

- 3.) The function m is given in three equivalent forms. Which form most quickly reveals the zeros (or roots) of the function?

a.) $m(x) = 2(x + 6)(x + 2)$

b.) $m(x) = 2x^2 + 16x + 24$

c.) $m(x) = 2(x + 4)^2 - 8$

Identify the zeros.

- 4.) The function f is given in three equivalent forms. Which form most quickly reveals the y-intercept?

a.) $f(x) = \frac{1}{2}(x - 3)(x - 7)$

b.) $f(x) = \frac{1}{2}(x - 5)^2 - 2$

c.) $f(x) = \frac{1}{2}x^2 - 5x + \frac{21}{2}$

What is the y-intercept?
