GRADE 6

Don't Feed the Phish

How can you protect yourself from phishing?

PRIVACY & SECURITY

*We care about
everyone's privacy.*

OVERVIEW

Internet scams are part of being online today, but many kids might not be aware of them. How do we help our students avoid being tricked into clicking malicious links or giving out private information? Use this lesson to help kids avoid online identity theft and phishing schemes.

Students will be able to:

- Compare and contrast identity theft with other kinds of theft.
- Describe different ways that identity theft can occur online.
- Use message clues to identify examples of phishing.

Lesson Snapshot   **Estimated time: 45 mins.**

Warm Up:	Safe or Unsafe?	10 mins.
Explore:	How Identity Theft Happens	15 mins.
Analyze:	How to Catch a Phish	15 mins.
Wrap Up:	Stay Safe from Scams	5 mins.

- **Family Engagement Resources**

LESSON PLAN

Key Vocabulary:

identity theft
a type of crime in which your private information is stolen and used for criminal activity

internet scam
an attempt to trick someone, usually with the intention of stealing money or private information

phishing
when someone poses as an institution, like a bank or school, and sends you a personalized message asking you to provide private information

private information
information about you that can be used to identify you because it is unique to you (e.g. your full name or your address)

shortened URL
a web address that has been condensed and which could mislead an user into going into a risky website

---

Warm Up: **Safe or Unsafe?**   10 mins.

1. **Project Slide 4** and read it aloud: *What's something you own that someone else might want to steal? Why? What would they do with it? Take turns sharing your idea with your partner.*

   After students pair-share, call on a few of them to share out with the class. Students may respond by naming things of value that they own (clothing items, electronics, etc.) and how they might be used.

2. **Say**: *In reality, the thing you own that might be most valuable -- and most likely to get stolen -- is not a thing at all: It is your identity. What do you think that means? How could someone steal your identity?*

   Call on students to respond. Students may say: *It means that someone can pretend to be you* or *Someone can get your information.* Follow up by asking students to explain more and clarify any misconceptions. For example, identity theft might mean that one or more pieces of information about you has been stolen, not that everything about you has been. It also doesn't mean you no longer have what's been stolen (as in the case of a stolen object); you are still you and your identity hasn't changed.

3. **Project Slide 5** and define **identity theft** as *a type of crime in which your private information is stolen and used for criminal activity*.

   Ask: *What do you think is meant by "private information"? What would an example of that be?*

   Call on students to respond and provide examples. Define **private information** as *information about you that can be used to identify you because it is unique to you (e.g., your full name, phone number, or address).* (**Slide 6**)

4. **Say**: *Identity theft is important to know about, because if your identity is stolen, it can lead to some pretty bad consequences. And you may not even know about those consequences until far into the future. If your identity is stolen, it could potentially enable someone to:* (**Slide 7**)

   - *steal money from you.*
   - *apply for credit cards in your name and buy things.*
   - *cyberbully someone while pretending to be you.*
   - *create false identification documents.*
   - *apply for loans (to buy a car or house).*
   - *get a driver's license or a job under your name.*

5. **Say**: *Now that we know what identity theft is, let's talk about how it happens and what you can do.*

Explore: **How Identity Theft Happens**   15 mins.

1. **Say**: *One way that someone can try to steal your identity on the internet is by getting you to click a link or enter information about yourself. This is called an* internet scam (**Slide 8**), *which is an attempt to trick someone, usually with the intention of stealing money or private information. Let's see how this can happen.*

   Have small groups collaborate on the **Trick Questions! Practice Quiz Student Handout**. Allow students two minutes to complete the activity. Most students will quickly recognize that "DON'T!" is the right answer each time. Challenge them to figure out reasons each character in each scenario might have gotten fooled by the scams. Students may indicate the following reasons:

   - the wish to win money, a prize, discount, or other benefit.
   - the fear of losing one's photos, videos, games, or access to their account.
   - feeling pressure to act quickly "before it's too late."
   - curiosity to know more.

2. **Identify** the last point as the Curiosity Gap, which is the desire every person has to figure out missing information. Explain that online messages are often designed to trigger your Curiosity Gap so you will click a link to find out more. Give examples:

   - a tweet that asks an interesting question.
   - a photo with the caption "Funniest thing ever!"
   - a video pop-up that says "To continue watching, click here."
   Tell students that the link may lead to a site with false or misleading information, or to a site that is malicious or harmful. These sites let identity thieves steal your personal information and, sometimes, your money.

3. **Explain** that one of the most common ways identity thieves get your private information is through something called **phishing** (*when someone poses as an institution, such as a bank or school, and sends you a personalized message asking you to provide private information*). Students might think of phishing as similar to fishing -- someone trying to "catch" people's private information like trying to catch a fish. (**Slide 9**)

4. **Project** the samples messages on **Slide 10**. Have students work in small groups to decide whether to click on or skip the various links shown and why. Encourage them to pinpoint which details helped them decide.

   They should identify only the Mari_Tellez example as one that is likely OK to click.

   Explain that some links, or URLS, are not what they seem. Ask: *Why do you think the links might trick someone?* Define **shortened URL** (**Slide 11**) as *a web address that has been condensed and which could potentially mislead a user into going into a risky website*. Explain that such a website may:

   - install malware on your device.
   - steal your information.
   - charge you money.

   Say: *In the next activity, you'll learn strategies for protecting yourself against phishing and identity theft.*

Analyze: **How to Catch a Phish**   15 mins.

1. **Distribute** the **How to Catch a Phish Student Handout** and focus students' attention on the list of clues. Allow one minute for students to read the list of clues and answer any questions they have.

2. **Tell** students that they will work in pairs to analyze examples of messages that use tricks to phish for your information. (**Slide 12**) Model how to highlight a clue in the message, and list the type of clue in the empty box. You may wish to have students color-code the clues.

3. **Allow** pairs five minutes to complete the activity on the handout.

   Call on students to share out their answers. Use the **Teacher Version** to support students in using specific details from each example.

4. **Summarize** how checking for clues that indicate phishing can help protect you from identity theft.

Wrap Up: **Stay Safe from Scams**   5 mins.

1. **Say**: *You have learned about the importance of protecting your information from identity theft. You also have learned strategies for guarding against phishing scams. Now use what you have learned to show how others can protect themselves against identity theft.*

2. **Project Slide 13** and read aloud the questions. Allow students a few minutes to answer and then collect to assess student understanding.

3. Have students complete the **Lesson Quiz**. Send home the **Family Activity** and **Family Tips**.

Extension Activity:

Have students create anti-phishing posters. Students can give the school and broader community tips about protecting themselves from phishing and identity theft. Students can also use digital-poster tools. See our **Top Apps and Websites for Making Posters**.
