The Life Cycle of a Butterfly

WHAT IS A LIFE CYCLE?

A life cycle is the stages a living thing goes through during its life. In some cases the **process** is slow, and the changes are **gradual**. A butterfly, like many other creatures, has a life cycle that consists of four stages.

EGG

The life cycle of a butterfly starts as a small round **egg**. The female butterfly will lay her eggs on leaves or stems. She does this to ensure the eggs will have food once they hatch.

1

LARVA

After the egg hatches a worm-like caterpillar comes out. Another name for a caterpillar is **larva**. In this stage, the caterpillar is very hungry. It will eat plenty until it stops growing. As it continues to grow, it **sheds** its skin. The shedding of its skin and growing another one, is called **molting**.

2

PUPA

It is time for the **transformation** stage! Once the caterpillar has fully grown, it will turn into a **pupa**. In this stage, the caterpillar is undergoing a transformation called **metamorphosis**. The caterpillar's body is completely changing and turning into a butterfly.

3

ADULT

When the butterfly is ready to come out, the pupa will break open. The **adult** butterfly will take flight and begin its search for food and a **mate**. Then the life cycle of a butterfly will start all over again.

4

Life Cycle of a Butterfly

Name: _____

Directions: Read the article on the life cycle of a butterfly. Write a paragraph about the life cycle, explaining each part in your own words. Be sure to include a topic sentence, at least three details, and a conclusion. Also include sequencing words, such as first, next, then, and last.
