

The goal of Science is to develop scientifically literate students with a curiosity and interest in science that extends well beyond high school. In science classrooms, students strengthen their skills in experimental design, observation, computation, problem-solving, and scientific writing. Hands-on and inquiry-based activities are employed to the maximum extent possible.

In addition to the core courses (Integrated Earth & Physical Science, Biology, Chemistry, and Physics), we offer electives such as Forensics, Environmental Science, and Human Biology. Our advanced placement Biology, as well as our UCONN Environmental Science and Physics courses provide the opportunity to earn college credits.
