

## Unit 3 - Functions and Transformations

### Overview

Students will understand the importance of functions - they give us the ability to predict because they have only one output given an input. There is an emphasis on input/output language throughout unit. Piecewise, compositions, and inverses are explored. A significant part of this unit is about transformations, having students understand how parameters affecting the inputs differ from the parameters affecting the outputs. The ABCD method of transforming functions (with point mapping) will really help for when many different parameters are used at once. Graph analysis is introduced but somewhat limited in scope.

**21st Century Capacities:** Synthesizing

### Stage 1 - Desired Results

<p><b>ESTABLISHED GOALS/ STANDARDS</b></p> <p><b>MP 1</b> Make sense sense of problems and persevere in solving them  <b>MP2</b> Reason abstractly and quantitatively  <b>MP5</b> Use appropriate tools strategically  <b>MP7</b> Look for and make use of structure</p> <p>CCSS.MATH.CONTENT.HSF.IF.B.4 For a function that models a relationship between two quantities, interpret key features of graphs and tables in terms of the quantities, and sketch graphs showing key features given a verbal description of the relationship. <i>Key features include: intercepts; symmetries; end behavior; and periodicity.*</i></p> <p>CCSS.MATH.CONTENT.HSF.IF.B.5 Relate the domain of a function to its graph and, where applicable, to the quantitative relationship it describes.</p> <p>CCSS.MATH.CONTENT.HSF.IF.C.7 Graph functions expressed symbolically and show key</p>	<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <th colspan="2" style="background-color: #D3D3D3; text-align: center;"><b>Transfer:</b></th> </tr> <tr> <td colspan="2" style="padding: 5px;"><i>Students will be able to independently use their learning in new situations to...</i></td> </tr> <tr> <td colspan="2" style="padding: 5px;"> <ol style="list-style-type: none"> <li>1.
