Show all work. Attach any additional sheets of paper as needed.

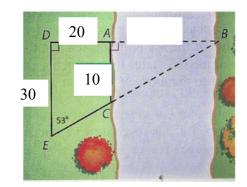

1. Maya needed to determine the longest distance across Grand Lake. She the diagram.

a. Provide an argument (a proof) to justify that $\triangle NPM \sim \triangle RPS$.

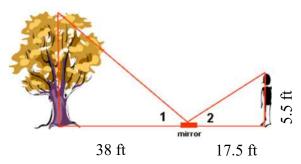

b. Determine MN, the longest distance across Grand Lake.

2. The CHS STEM Club decided to take a field trip to test what they were learning in math class. They decided to find the width of the Colorado River at a particular point A as shown in the image. Pacing from point A, they located points D, E, and C as shown in the diagram. Determine the width of the river.

3. Bella needs to know how tall the tree is. Bella places a mirror on the ground to use similar triangles. Use the image at the right to determine the height of the tree.

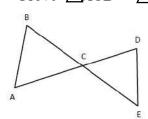

4. a. Given $\frac{AC}{EC} = \frac{BC}{DC}$

Prove $\triangle ACB \sim \triangle ECD$

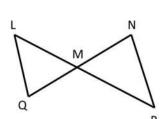

Prove: $\Delta VWX \sim \Delta UWY \sim \Delta TWZ$

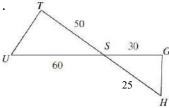

Given: \overline{LQ} || \overline{NP}

Prove: Δ LMQ $\sim \Delta$ PMN

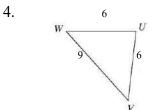

For problems 1-5 determine if the given information is enough to conclude that the two triangles are similar. If so, complete the similarity statement and state which similarity condition (AA, SAS, SSS) you used, if not, state "not similar". Be sure to show your work to justify your reasoning.

1.

 Δ ____ ~ Δ ____

P 13.5

 Δ ____ $\sim \Delta$ ____ by____

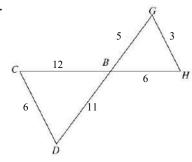

2

 Δ ____ $\sim \Delta$ ____

5.

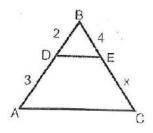

Δ_____ ~ Δ____ by_____

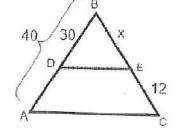

3.

 Δ ____ $\sim \Delta$ ____

For the following problems, the triangles are similar. Solve for x. Show your work

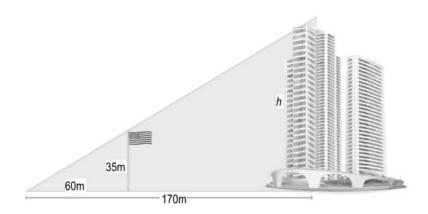

Directions: Solve for x, be sure to show your proportion.

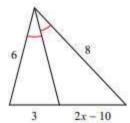

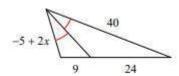

In the diagram, a large flagpole stands outside of an office building. Marquis realizes that when he looks up from the ground, 60 m away from the flagpole, that the top of the flagpole and the top of the building line up. If the flagpole is 35m tall, and Marquis is 170m from the building, how tall is the building?

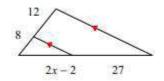

1. A tower casts a shadow of 54 feet. A 5-foot tall pole near the tower casts a shadow 7 feet long. How tall is the tower?

Solve for x:

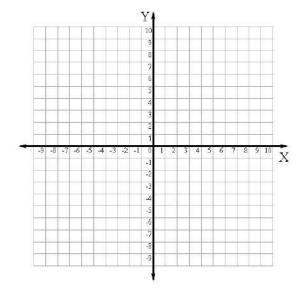

1. A quadrilateral has vertices A(-9,-6) B(6,-6) C(6,-9) D(-9,-9).

	Length AB	Length BC	Length CD	Length DA	Perimeter	Area
Pre-						
image						

a. Apply a dilation of $D_{(\frac{3}{4}, B)}$. Give the new coordinates, and graph the image.

- $A'(\quad \ \, ,\quad \ \,)\quad B'(\quad \ \, ,\quad \ \,)\quad C'(\quad \ \, ,\quad \ \,)\quad D'(\quad \ \, ,\quad \,)$
- b. How does the image perimeter relate to the original perimeter and k?
- c. How does the image area relate to the original area and k?
