# Water, Sewer, and Stormwater Rate Study: Phase II.b

Courtney Black, Project Manager

October 22, 2018

# Study Segments

| <b>Study Phase I<br/>May 29</b> | <b>Study Phase II.a<br/>August 13</b> | <b>Study Phase II.b<br/>October 22</b> |
|---------------------------------|---------------------------------------|--|
| Capital Funding Analysis        | Stormwater Credit Analysis            | Water Rate Design                      |
| Policy Evaluation               | Sewer Utility Tax Evaluation          | System Development Charges Update      |
| Operations Forecast             | Water Revenue Reconciliation          | Utility Benchmarking                   |
| Scenario Analysis               |                                       | Review: Stormwater Credit Analysis     |
| Rate Plan Alternatives          |                                       |  |

# Phase II.a Review

## ◆ Rate Plan

- Water: Phased CIP, conservative revenue basis
- Sewer: Programmed CIP, decrease utility tax
- Stormwater: Delay programmed staffing, adjust for cost-based credit

| Utility          | 2019 | 2020 | 2021 | 2022  | 2023  |
|------------------|------|------|------|-------|-------|
| Water (Previous) | 4%   | 4%   | 4%   | 4%    | 4%    |
| Water (Updated)  | 3%   | 3%   | 3%   | 3%    | 3%    |
| Sewer (Previous) | 10%  | 10%  | 10%  | 4.25% | 4.25% |
| Sewer (Updated)  | 9.5% | 9.5% | 9.5% | 4.75% | 4.75% |
| Stormwater       | 4.5% | 4.5% | 4.5% | 3%    | 3%    |

## ◆ Stormwater Rate Credit

- 2019 Implementation
- Phase-in Alternative

# Utility Rates Progression

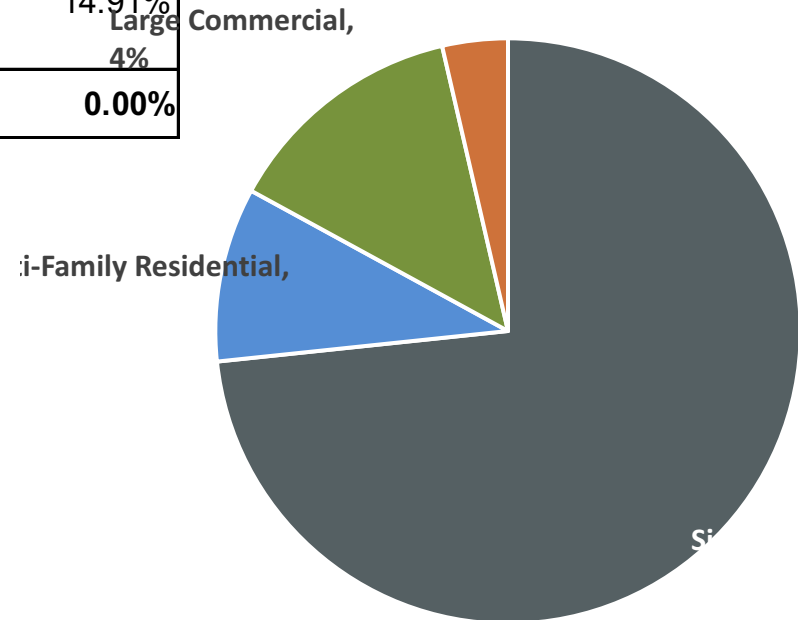

# COSA 2013 Water Rate Study

| Customer Classes          | 2014 Revenue with Across-the-Board Increase | 2014 Cost of Service | Indicated Increase / (Decrease) |
|---------------------------|---|----------------------|---------------------------------|
| Single Family Residential | \$ 2,397,926                                | \$ 2,430,050         | 1.34%                           |
| Multi-Family Residential  | 418,282                                     | 268,505              | -35.81%                         |
| Commercial                | 381,161                                     | 480,995              | 26.19%                          |
| Large Commercial          | 119,526                                     | 137,345              | 14.91%                          |
| <b>TOTAL</b>              | <b>\$ 3,316,895</b>                         | <b>\$ 3,316,895</b>  | <b>0.00%</b>                    |

- Subsidies phased out between classes from 2014 to 2018
- Final cost shares used for 2018 rate design

---

# Water Rate Design

# **Rate Design**

---

- ◆ **Determines the structure by which revenue will be collected from individual customers within a class**
  - Based on utility goals and objectives

## Continued Rate Study Objectives from 2013 Study

|                        |   |
|------------------------|---|
| Equity                 | Reduce usage allowance from 10 ccf to 5 ccf by 2018                     |
| Affordability          | Reduce fixed charge share of revenue recovery                           |
| Conservation           | Set block thresholds and prices to reflect peak usage cost differential |
| Industry Best-Practice | Rate structures that are easy to understand and administer              |

## 2018 Rate Design Focus

- Continue phase-out of Single Family Residential usage allowance from 5 ccf to 0 ccf by 2023
- Ensure rate structure aligns with updated customer demand patterns

# 2018 Rate Structure

2018 Bimonthly Rate Schedule

| Meter Size     | Base Meter Charge | Meter Allowance |
|----------------|-------------------|-----------------|
| 3/4"           | \$ 39.77          | 5               |
| 1"             | 45.42             | 7               |
| 1.5"           | 75.59             | 14              |
| 2"             | 110.85            | 24              |
| 3"             | 232.37            | 53              |
| 4"             | 350.75            | 85              |
| 6"             | 588.18            | 150             |
| 8"             | 981.30            | 250             |
| MFR Add'l Unit | \$ 33.70          | 5               |

◆ **Fixed Charge**

- Meter size based fee
- Additional unit charge for MFR
- Usage allowance that increases with meter size
- Additional MFR allowance based on units
- 46% of total revenue

◆ **Volume**

- SFR – 3 tier increasing block rate
- All other classes single volume rate

| Customer Class   | All Usage | 0 - 14 ccf | 14 - 40 ccf | Over 40 ccf |
|------------------|-----------|------------|-------------|-------------|
| SFR              |           | \$ 4.86    | \$ 5.12     | \$ 6.13     |
| MFR              | \$ 2.64   |            |             |             |
| Commercial       | \$ 4.64   |            |             |             |
| Large Commercial | \$ 2.57   |            |             |             |

# MFR Sample Allowances

- ◆ Varies by meter size (allowance #1)
- ◆ 5 ccf per additional unit (allowance #2)
- ◆ Each customer has an individual allowance

| Meter Size | Units | Allowance #1 | Allowance #2 | Total Allowance |
|------------|-------|--------------|--------------|-----------------|
| 3/4"       | 3     | 5            | 10           | 15              |
| 3/4"       | 8     | 5            | 35           | 40              |
| 1"         | 5     | 7            | 20           | 27              |
| 1"         | 7     | 7            | 30           | 37              |
| 1.5"       | 12    | 14           | 55           | 69              |
| 1.5"       | 14    | 14           | 65           | 79              |
| 2"         | 6     | 24           | 25           | 49              |
| 2"         | 31    | 24           | 150          | 174             |
| 3"         | 25    | 53           | 120          | 173             |
| 3"         | 62    | 53           | 305          | 358             |

# Comprehensive Rate Structure Update

## Revise SFR block sizes

Block 1 threshold reduced from 14 ccf to 12 ccf winter average, lower revenue recovery

Block 3 threshold reduced from 40 ccf to 30 ccf to include customers using greater than 2 x the annual average bimonthly use, higher revenue recovery

## Phase out SFR allowance by 1 ccf annually

Currently 5 ccf bimonthly in 2018

Phase-out accomplished in 2023

## Simplify MFR and Commercial Rate Structures (phase-out complexities)

Eliminate all usage allowances

Eliminate MFR per unit charge

Single volume rate for all usage

## Reduce fixed revenue recovery – target 35% versus current 46%

Minimizes bill impact to low water users to offset reducing the allowance

Recognizes cost of the allowance included in the fixed charge

# Revised 2019 Water Rate Schedule

2019 Bimonthly Rate Schedule

| Meter Size     | Base Meter Charge | SFR Allowance |
|----------------|-------------------|---------------|
| 3/4"           | \$ 39.57          | 4             |
| 1"             | 45.20             | 4             |
| 1.5"           | 75.22             |               |
| 2"             | 110.30            |               |
| 3"             | 231.23            |               |
| 4"             | 349.03            |               |
| 6"             | 585.30            |               |
| 8"             | 976.51            |               |
| MFR Add'l Unit | n/a               | n/a           |

◆ **Fixed Charge**

- Set for target revenue recovery (35%)
- 1 ccf phase-out of SFR usage allowance
- Eliminate usage allowances and unit charges for MFR & COM

◆ **Volume**

- Revise block sizes to reflect updated usage statistics
- Rebalance usage block pricing
- Single volume rate for MFR and COM

| Customer Class   | All Usage | 0 - 12 ccf | 12 - 30 ccf | Over 30 ccf |
|------------------|-----------|------------|-------------|-------------|
| SFR              |           | \$ 3.70    | \$ 5.95     | \$ 7.45     |
| MFR              | \$ 4.12   |            |             |             |
| Commercial       | \$ 4.08   |            |             |             |
| Large Commercial | \$ 2.53   |            |             |             |

# Revised 2023 Water Rate Schedule

2023 Bimonthly Rate Schedule

| Meter Size     | Base Meter Charge | SFR Allowance |
|----------------|-------------------|---------------|
| 3/4"           | \$ 44.54          | 0             |
| 1"             | 50.87             | 0             |
| 1.5"           | 84.66             |               |
| 2"             | 124.15            |               |
| 3"             | 260.25            |               |
| 4"             | 392.84            |               |
| 6"             | 658.77            |               |
| 8"             | 1,099.07          |               |
| MFR Add'l Unit | n/a               | n/a           |

◆ **Fixed Charge**

- Completion of SFR usage allowance phase-out
- ATB increases to MFR and COM
- 35% of total revenue

◆ **Volume**

- Block 1 rate goes down with additional usage from allowance phase-out

| Customer Class   | All Usage | 0 - 12 ccf | 12 - 30 ccf | Over 30 ccf |
|------------------|-----------|------------|-------------|-------------|
| SFR              |           | \$ 2.47    | \$ 6.70     | \$ 8.39     |
| MFR              | \$ 4.64   |            |             |             |
| Commercial       | \$ 4.60   |            |             |             |
| Large Commercial | \$ 2.91   |            |             |             |

- Subsidies due to usage allowances are corrected
- Updated rate design reflects capacity commitment and actual usage demand

# Rate Design Alternatives

---

1. Full implementation of comprehensive rate structure design changes (including phased elements)
2. Partial rate design implementation:
  - a) Do not phase-out the SFR usage allowance – remains at 5 ccf
  - b) Revise SFR block sizes for usage statistics
  - c) Simplify MFR and COM rate structures – no usage allowances or unit charges
3. Do not change rate structure – apply rate increases uniformly Across-the-Board (ATB)

---

# **System Development Charge (SDC)**

# SDC Concepts and Authority

- ◆ Authorized by RCW 35.92.025 to charge properties seeking to connect to the system **“in order that such property owners shall bear their equitable share of the cost of such system.”**
  - A one-time charge to a new customer
  - Not based on target revenue generation
  - Based on an equitable share of the cost of the system
- ◆ Utility infrastructure cannot feasibly be constructed incrementally for growth
  - Systems are oversized to serve future connections
  - Existing customers must carry the cost of available capacity
- ◆ **In general, the purpose of a connection charge is to mitigate the impact of growth on the utility systems, or to compensate for investments already made to provide available capacity to serve future growth.**

# Existing SDCs

| Hotel/Motel                          |            |          | .085 ERU/unit | .085 ERU/unit |            |

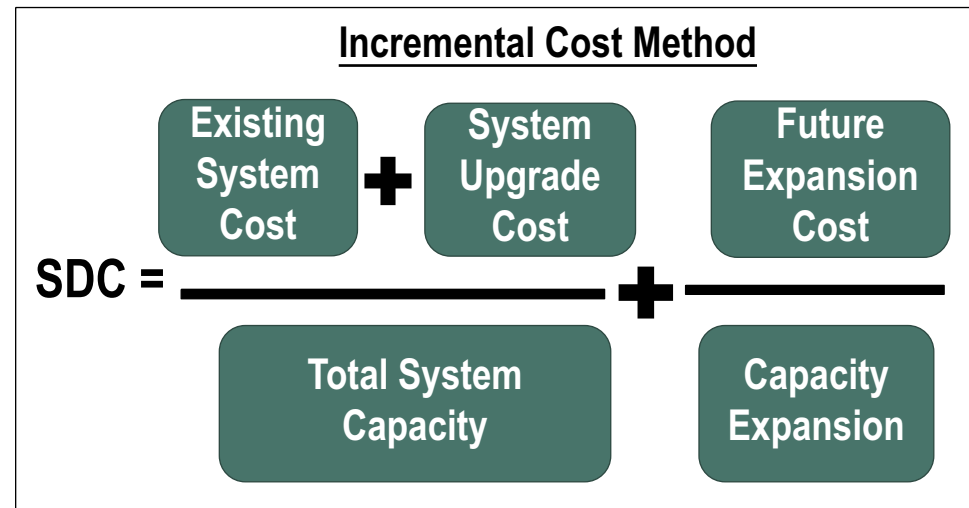

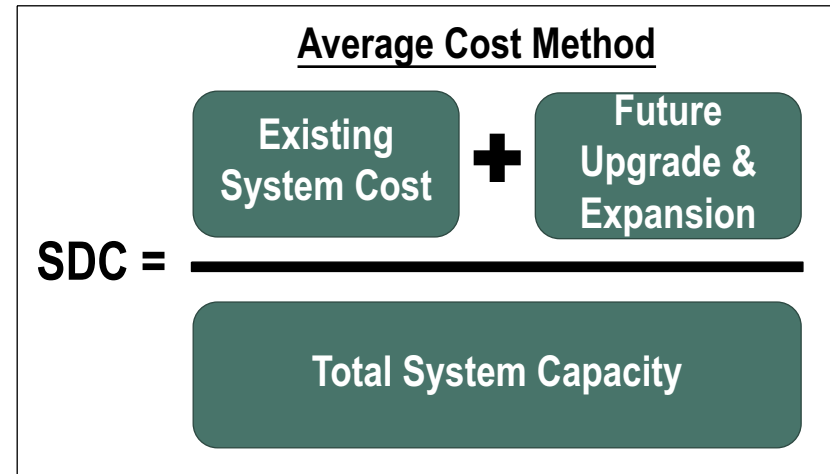

- ◆ **Current methodology - complex structure**
  - Recommendation: single fee for simplification and available cost basis
    - Water: Meter Capacity Equivalent (MCE) basis
    - Sewer: flow-based Equivalent Residential Unit (ERU)
    - Stormwater ESU basis maintained

# SDC Policy Considerations and Methodology

Based on the City's policy direction on how growth supports growth-related costs:

1. The Average Cost Method (ACM) seeks to arrive at the average cost of one unit of capacity.
2. The Incremental Cost Method (ICM) separates the cost of capacity expansion, and recovers the cost from future customers served by that capacity.

# Water System Development Charge

| Average Cost Method SDC      |                      |
|------------------------------|----------------------|
| Existing System Costs        | \$ 35,231,756        |
| Future System Costs          | 10,371,500           |
| <b>Total Allocable Costs</b> | <b>\$ 45,603,256</b> |
| Total MCE Capacity           | 11,881               |
| <b>TOTAL SDC PER MCE</b>     | <b>\$ 3,838</b>      |
| <i>Existing SDC</i>          | 2,930                |

| Incremental Cost Method SDC      |                      |
|----------------------------------|----------------------|
| Existing System                  | \$ 35,231,756        |
| System Upgrade Cost              | 5,792,000            |
| <b>Total</b>                     | <b>\$ 41,023,756</b> |
| <b>Total System Capacity</b>     | <b>11,881</b>        |
| <b>System Buy-In</b>             | <b>\$ 3,453</b>      |
| <b>Future Expansion Costs</b>    | <b>\$ 4,579,500</b>  |
| <b>Increased Capacity (MCEs)</b> | <b>5,817</b>         |
| <b>Future System Buy-In</b>      | <b>\$ 787</b>        |
| <b>TOTAL SDC PER MCE</b>         | <b>\$ 4,240</b>      |
| <i>Existing SDC</i>              | \$ 2,930             |

# Existing System Cost Basis

- ◆ **New connections will support outstanding debt repayment through rates once connected**
  - Outstanding principal is deducted from the cost basis
- ◆ **Alternatively SDC revenue can be dedicated to debt repayment**
  - No deduction is made for outstanding principal
  - Updated financial policy

| Existing System                         |                      |
|---|----------------------|
| Water Capital Assets through 2017       | \$ 34,146,605        |
| plus: Interest Accrued on Utility Funde | 11,281,267           |
| less: Contributed Assets                | (8,078,655)          |
| less: Net Debt Principal                | (2,117,461)          |
| <b>TOTAL</b>                            | <b>\$ 35,231,756</b> |
| <i>Total with Updated Policy</i>        | <i>\$ 37,349,217</i> |

# Water SDC Alternatives

| Approach                      | SDC per MCE |
|-------------------------------|-------------|
| Existing SDC (Low Level)      | \$2,930     |
| Existing SDC (Intermediate)   | \$3,370     |
| Average Cost Method           | \$3,838     |
| ACM - SDC-funded Debt Service | \$4,017     |
| Incremental Cost Method       | \$4,240     |
| ICM - SDC-funded Debt Service | \$4,418     |

# Sewer System Development Charge

| Average Cost Method SDC      |                      |
|------------------------------|----------------------|
| Existing System Costs        | \$ 40,677,022        |
| Future System Costs          | 34,564,483           |

# Stormwater Credit Review (II.a)

# Stormwater Rate Credit Policy

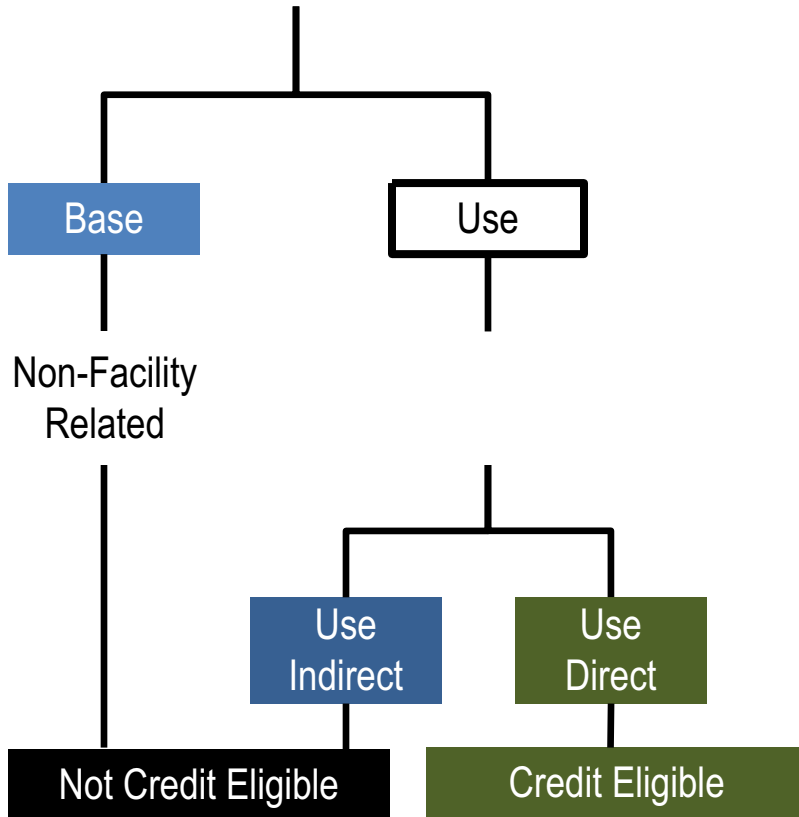

---

- ◆ **Washougal's existing available rate credit value of 75% is provided to the following customer groups**
  - Any property with qualifying onsite mitigation facilities
  - Individual NPDES permit-holders
- ◆ **Rate equity / rate credits are emerging as a concern as program costs and resulting rates go up to meet regulatory pressures**
- ◆ **Key features of a sustainable rate credit policy**
  - Should be cost-based and acknowledge that most stormwater program costs are fixed and unaffected by those who mitigate their impacts (*cost*)
  - Should acknowledge that even those who fully mitigate their own impacts are served / protected by the public system (*benefit*)
- ◆ **The “cost of service” analysis evaluates savings to the utility from on-site mitigation to determine the cost-based maximum credit level**

# Functional Cost Allocation

## Cost Allocation Methodology

# Non-Credit Eligible Cost Categories

## Base

Billing

Public Outreach

Administrative Overhead

## Use Indirect

Regulatory Compliance (City-wide NPDES Permit)

Engineering, Data collection and monitoring, Code and policy development

Grant Administration

Street Sweeping

240.5 acres of city-owned roadway, 112 cubic yards of debris removed in 2017

# Credit Eligible Cost Categories

---

## Use Direct (portion allocable to onsite mitigation)

### Vegetation Maintenance

14.7 acres of city-owned facilities

### Cleaning and Maintenance of Catch Basins

1,365 total with 859 cleaned in 2019, 187.5 cubic yards of debris removed in 2017

### Maintenance of Other System Components

### Cleaning and Maintenance of Dry-wells

# Stormwater Credit Comparisons

| Community     | Credit Policy   |
|---------------|---|
| Battle Ground | 0% rate credit  |
| Camas         | O&M credit minus street sweeping with NPDES may be granted with Public Works Director consent |
| Duvall        | 25% credit for onsite mitigation. Additional discount for onsite discharge system up to 50%   |
| Mount Vernon  | 30% rate credit   |
| Sumner        | 25% private outfall, 50% NPDES permit, 40% Storm Maintenance Agreement, 50% LID               |

# Updated Phased Credit Alternative: 50% 2023

- ◆ **Updated 5 Year Phase-in**
  - Half of credit reduction by 2023 (50%)
- ◆ **Includes 2019-2021 4.5% rate increases, 3% in 2022-2023**

| Bimonthly Rate            | 2018     | 2019     | 2020     | 2021     | 2022     | 2023     |
