Two Graphs for Each Relationship

Lesson 13

CCSS Standards: Addressing	• 7.RP.A.2
CCSS Standards: Building towards	• 7.EE.A

Let's use tables,
equations, & graphs to answer
questions about
proportional
relationships!

$$2 > -3$$

True or False: Fractions and Decimals

Warm Up

$$1 + 2 \cdot 3$$

$$(1 - 2) + 3$$

$$5(2 + 2)$$

$$101_2 = 5_{10}$$

Decide whether each equation is true or false.
Be prepared to explain your reasoning.

$$\frac{3}{2} \cdot 16 = 3 \cdot 8$$

$$\frac{3}{4} \div \frac{1}{2} = \frac{6}{4} \div \frac{1}{4}$$

$$(2.8) \cdot (13) = (0.7) \cdot (52)$$

Today's Goals

- ☐ I can interpret a graph of a proportional relationship using the situation given.
- ☐ I can write an equation representing a proportional relationship from a graph.

Tables, Graphs, and Equations

Activity 13.2

**Assign each teammate
a different letter: A, B, C.**

→ Complete the activity on your own.
(8 min.)

→ Share your ideas with your team.

Let's hear from each group:

What connections can you see between the table, graph, and equation?

A graph of a line through the origin and passing through the first quadrant represents a **proportional relationship**.

To find the constant of proportionality...

ordered pair

(x, y)

C.O.P.

y/x

An equation of a proportional relationship is given by

$$y = kx$$

where k is b/a for any point (a,b) on the graph other than the origin.

If I had point
(5,4), what would the
equation of the line be?

“Are you ready for more?”

The graph of an equation of the form $y = kx$ is a positive number, is a line through $(0,0)$ and the point $(1,k)$.

1. Name at least one line through $(0,0)$ that cannot be represented by an equation like this.
2. If you could draw the graphs of *all* of the equations of this form in the same coordinate plane, what would it look like?

Hot Dog Eating Contest

Activity 13.3

- 5 Practices

Croque Monsieur
Toasted H
3.90

Nathan's Hot Dog Eating Contest

- began in 1997
- 20 contestants
- The contestant that consumes and keeps down the most hot dogs and buns in 10 minutes is the winner.
- the Mustard Belt

Andre and Jada were in a hot dog eating contest.

Andre ate 10 hot dogs in 3 minutes.

Jada ate 12 hot dogs in 5 minutes.

- ★ Complete the notebook page with your partner.
- ★ Be prepared to explain your thinking as a class.

At what rate did Andre eat hot dogs?

Write equations for the lines:

$$\text{Andre} \rightarrow \mathbf{h = 10/3t}$$

$$\text{Jada} \rightarrow \mathbf{h = 12/5t}$$

$$\mathbf{h = 2.4t}$$

What does the constant of proportionality mean in each equation?

Write equations for the lines:

$$\text{Andre} \rightarrow t = \frac{3}{10}h$$

$$t = 0.3h$$

$$\text{Jada} \rightarrow t = \frac{5}{12}h$$

What does the constant of proportionality mean in each equation?

Do the graphs below tell the same story?

How can you see the same information in both?

Today's Goals

- ☐ I can interpret a graph of a proportional relationship using the situation given.
- ☐ I can write an equation representing a proportional relationship from a graph.
