

2012-2013 Quarter 1 - 5th Grade Math Rubric

Mathematics

Rubric Key: ☐ - Standards introduced and assessed

☐ - Standards maintained and assessed as needed

Operations and Algebraic Thinking

Write and interpret numerical expressions.

Standard	4	3	2	1	Notes
MCC5.OA.1 Use parentheses, brackets, or braces in numerical expressions, and evaluate expressions with these symbols.	<u>Uses</u> and <u>evaluates</u> problems with parentheses, brackets, and braces with no procedural or computational errors.	Consistently <u>uses</u> and <u>evaluates</u> problems with parentheses, brackets, and braces with few procedural or computational errors.	Shows progress, but inconsistently <u>uses</u> and <u>evaluates</u> problems with including parentheses, brackets, and braces.	Shows minimal progress or does not <u>use</u> and <u>evaluate</u> problems including parentheses, brackets, and braces.	For example, evaluate the numerical expression: $2 \times [(9 \times 4) - (17 - 6)] = 50$
MCC5.OA.2 Write simple expressions that record calculations with numbers, and interpret numerical expressions without evaluating them.	<u>Communicates</u> mathematical ideas precisely by <u>writing</u> simple expressions that record calculations with numbers, and <u>interpret</u> numerical expressions.	Consistently <u>communicates</u> mathematical ideas precisely by <u>writing</u> simple expressions that record calculations with numbers, and <u>interpret</u> numerical expressions with few computational or procedural errors.	Shows progress, but inconsistently <u>communicates</u> mathematical ideas precisely by <u>writing</u> simple expressions that record calculations with numbers, and <u>interpret</u> numerical expressions.	Shows minimal progress or does not <u>communicate</u> mathematical ideas precisely by <u>writing</u> simple expressions that record calculations with numbers, and <u>interpret</u> numerical expressions.	For example, express the calculation "add 8 and 7, then multiply by 2" as $2 \times (8 + 7)$. Recognize that $3 \times (18932 + 921)$ is three times as large as $18932 + 921$, without having to calculate the indicated sum or product.

Number & Operations in Base Ten

Understand the place value system.

Standard	4	3	2	1	Notes
MCC5.NBT.1 Recognize that in a multi-digit number, a digit in one place represents 10 times as much as it represents in the place to its right and 1/10 of what it represents in the place to its left.	<u>Analyzes</u> the effect on the product when a number is <u>multiplied</u> by 10, 100, 1000, 0.1, and 0.01 with no procedural or computational errors.	Consistently <u>analyzes</u> the effect on the product when a number is <u>multiplied</u> by 10, 100, 1000, 0.1, and 0.01 with few computational or procedural errors.	Shows progress, but inconsistently <u>analyzes</u> the effect on the product when a number is <u>multiplied</u> by 10, 100, 1000, 0.1, and 0.01	Shows minimal progress or does not <u>analyze</u> the effect on the product when a number is <u>multiplied</u> by 10, 100, 1000, 0.1, and 0.01	

Number & Operations in Base Ten					
Understand the place value system.					
Standard	4	3	2	1	Notes
MCC5.NBT.2 Explain patterns in the number of zeros of the product when multiplying a number by powers of 10, and explain patterns in the placement of the decimal point when a decimal is multiplied or divided by a power of 10. Use whole-number exponents to denote powers of 10.	<u>Explain</u> the patterns in the number of zeros and <u>placement</u> of decimals in multiplication or division problems when <u>multiplying or dividing</u> by a power of 10 (10, 100, 1,000, 0.1, 0.01, 0.001) with no procedural or computational errors.	Consistently <u>explains</u> the patterns in the number of zeros and <u>placement</u> of decimals in multiplication or division problems when <u>multiplying or dividing</u> by a power of 10 (10, 100, 1,000, 0.1, 0.01, 0.001) with few procedural or computational errors.	Shows progress, but inconsistently <u>explains</u> the patterns in the number of zeros and <u>placement</u> of decimals in multiplication or division problems when <u>multiplying or dividing</u> by a power of 10 (10, 100, 1,000, 0.1, 0.01, 0.001).	Shows minimal progress or does not <u>explain</u> the patterns in the number of zeros and <u>placement</u> of decimals in multiplication or division problems when <u>multiplying or dividing</u> by a power of 10 (10, 100, 1,000, 0.1, 0.01, 0.001).	Make sure to use concepts of exponential notation. Be sure to use whole-number exponents to denote powers of 10.
MCC5.NBT.3 Read, write, and compare decimals to thousandths. a. Read and write decimals to thousandths using base-ten numerals, number names, and expanded form.	<u>Read</u> and <u>write</u> decimals to thousandths place value <u>using</u> base-ten numerals, number names, and expanded form with no procedural errors.	Consistently <u>reads</u> and <u>writes</u> decimals to thousandths place value <u>using</u> base-ten numerals, number names, and expanded form with few procedural errors.	Shows progress, but inconsistently <u>reads</u> and <u>writes</u> decimals to thousandths place value <u>using</u> base-ten numerals, number names, and expanded form.	Shows minimal progress or does not <u>read</u> and <u>write</u> decimals to thousandths place value <u>using</u> base-ten numerals, number names, and expanded form.	Standard has been separated due to complexity and length. MCC5.NBT.3a $347.392 = 3 \times 100 + 4 \times 10 + 7 \times 1 + 3 \times (1/10) + 9 \times (1/100) + 2 \times (1/1000).$
MCC5.NBT.3 Read, write, and compare decimals to thousandths. b. Compare two decimals to thousandths based on meanings of the digits in each place, using >, =, and < symbols to record the results of comparisons.	<u>Compares</u> two decimals to thousandths based on meanings of the digits in each place, <u>using</u> >, =, and < symbols to <u>record</u> the results of comparisons with no procedural errors.	Consistently <u>compares</u> two decimals to thousandths based on meanings of the digits in each place, <u>using</u> >, =, and < symbols to <u>record</u> the results of comparisons with few procedural errors.	Shows progress, but inconsistently <u>compares</u> two decimals to thousandths based on meanings of the digits in each place, <u>using</u> >, =, and < symbols to <u>record</u> the results of comparisons.	Shows minimal progress or does not <u>compare</u> two decimals to thousandths based on meanings of the digits in each place, <u>using</u> >, =, and < symbols to <u>record</u> the results of comparisons.	

Number & Operations in Base Ten					
Understand the place value system.					
Standard	4	3	2	1	Notes
MCC5.NBT.4 Use place value understanding to round decimals to any place.	<u>Uses</u> place value understanding to <u>round</u> decimals to any place with no procedural errors.	Consistently <u>uses</u> place value understanding to <u>round</u> decimals to any place with few procedural errors.	Shows progress, but inconsistently <u>uses</u> place value understanding to <u>round</u> decimals to any place.	Shows minimal progress or does not <u>use</u> place value understanding to <u>round</u> decimals to any place.	
Perform operations with multi-digit whole numbers and with decimals to hundredths.					
MCC5.NBT.5 Fluently multiply multi-digit whole numbers using the standard algorithm.	<u>Solves</u> multi-digit multiplication problems with no procedural or computational errors.	Consistently <u>solves</u> multi-digit multiplication problems with few procedural or computational errors.	Shows progress, but inconsistently <u>solves</u> multi-digit multiplication problems.	Shows minimal progress or does not use strategies to <u>solve</u> multi-digit multiplication problems.	Fluency has been interpreted to mean that a student solves multi-digit multiplication problems effortlessly and correctly most of the time.
MCC5.NBT.6 Find whole-number quotients of whole numbers with up to four-digit dividends and two digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.	<u>Finds</u> whole-number quotients of whole numbers with up to four-digit dividends and two digit divisors with no procedural or computational errors. *See note.	Consistently <u>finds</u> whole-number quotients of whole numbers with up to four-digit dividends and two digit divisors with few procedural or computational errors. *See note.	Shows progress, but inconsistently <u>finds</u> whole-number quotients of whole numbers with up to four-digit dividends and two digit divisors. *See note.	Shows minimal progress or does not <u>find</u> whole-number quotients of whole numbers with up to four-digit dividends and two digit divisors. *See note.	Explore the meaning of divisibility as a situation with no remainder, analyze divisibility, and informally explain divisibility relationships. *Ensure use of strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

Number & Operations in Base Ten					
Perform operations with multi-digit whole numbers and with decimals to hundredths.					
Standard	4	3	2	1	Notes
MCC5.NBT.7 Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used.	<u>Adds, subtracts, multiplies and divides</u> decimals with no procedural or computational errors.	Consistently <u>adds, subtracts, multiplies and divides</u> decimals with few procedural or computational errors.	Shows progress, but inconsistently <u>adds, subtracts, multiplies and divides</u> decimals.	Shows minimal progress or does not <u>add, subtract, multiply and divide</u> decimals.	Ensure use of concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used.
