# AA,SSS,SAS similarity

# Warm Up 7.5 V X 6 Y

- 1.  $\Delta UVW \sim \Delta XYZ$
- 2. What is the scale factor of  $\Delta UVW$  to  $\Delta XYZ$  5/6
- 3. What is VW?10
- 4. What is XZ? 9
- 5. If  $m\angle U = 50^{\circ}$  and  $m\angle Y = 30^{\circ}$ , what is  $m\angle Z$ ?

# **Objectives**

Prove certain triangles are similar by using AA, SSS, and SAS.

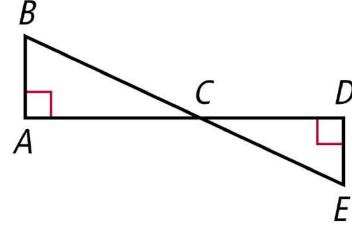

Use triangle similarity to solve problems.

There are several ways to prove certain triangles are similar. The following postulate, as well as the SSS and SAS Similarity Theorems, will be used in proofs just as SSS, SAS, ASA, HL, and AAS were used to prove triangles congruent.

Postulate 7-3-1 Angle-Angle (AA) Similarity			
POSTULATE	HYPOTHESIS	CONCLUSION	
If two angles of one triangle are congruent to two angles of another triangle, then the triangles are similar.	B E F	$\triangle ABC \sim \triangle DEF$	

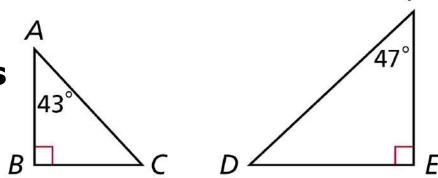

#### **Example 1: Using the AA Similarity Postulate**

Explain why the triangles are similar and write a similarity statement.

Since  $\overline{AC} \parallel \overline{DC}$ ,  $\angle B \cong \angle E$  by the Alternate Interior Angles Theorem. Also,  $\angle A \cong \angle D$  by the Right Angle Congruence Theorem. Therefore  $\triangle ABC \sim \triangle DEC$  by  $\triangle AA \sim 1$ .

Explain why the triangles are similar and write a similarity statement.

By the Triangle Sum Theorem,  $m\angle C = 47^{\circ}$ , so  $\angle C \cong \angle F$ .  $\angle B \cong \angle E$  by the Right Angle Congruence Theorem. Therefore,  $\triangle ABC \sim \triangle DEF$  by AA  $\sim$ .

#### **Theorem 7-3-2** Side-Side (SSS) Similarity

THEOREM	HYPOTHESIS	CONCLUSION
If the three sides of one triangle are proportional to the three corresponding sides of another triangle, then the triangles are similar.	$B \stackrel{A}{\longleftarrow} E \stackrel{D}{\longleftarrow} F$	$\triangle ABC \sim \triangle DEF$

### **Theorem 7-3-3** Side-Angle-Side (SAS) Similarity

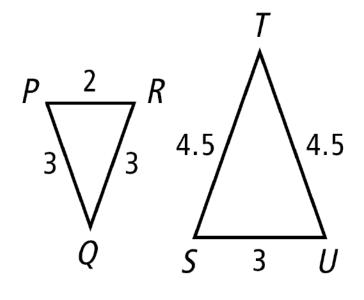

THEOREM	HYPOTHESIS	CONCLUSION
If two sides of one triangle are proportional to two sides of another triangle and their included angles are congruent, then the triangles are similar.	$ \begin{array}{c} A \\ C \\ \angle B \cong \angle E \end{array} $	$\triangle ABC \sim \triangle DEF$

#### **Example 2A: Verifying Triangle Similarity**

#### Verify that the triangles are similar.

#### $\triangle PQR$ and $\triangle STU$

$$\frac{PQ}{ST} = \frac{3}{4.5} = \frac{2}{3}$$
$$\frac{QR}{TU} = \frac{3}{4.5} = \frac{2}{3}$$
$$\frac{PR}{SU} = \frac{2}{3}$$

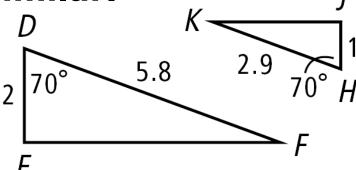

Therefore  $\triangle PQR \sim \triangle STU$  by SSS  $\sim$ .

#### **Example 2B: Verifying Triangle Similarity**

Verify that the triangles are similar.

 $\triangle$ *DEF* and  $\triangle$ *HJK* 

 $\angle D \cong \angle H$  by the Definition of Congruent Angles.

$$\frac{DE}{HJ} = \frac{2}{1} = 2$$
  $\frac{DF}{HK} = \frac{5.8}{2.9} = 2$ 

Therefore  $\Delta DEF \sim \Delta HJK$  by SAS  $\sim$ .

#### Verify that $\triangle TXU \sim \triangle VXW$ .

 $\angle TXU \cong \angle VXW$  by the Vertical Angles Theorem.

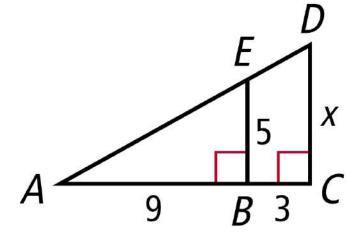

$$\frac{TX}{VX} = \frac{12}{16} = \frac{3}{4}$$
  $\frac{XU}{XW} = \frac{15}{20} = \frac{3}{4}$ 

Therefore  $\Delta TXU \sim \Delta VXW$  by SAS  $\sim$ .

#### **Example 3: Finding Lengths in Similar Triangles**

Explain why  $\triangle ABE \sim \triangle ACD$ , and then find CD.

**Step 1** Prove triangles are similar.

 $\angle A \cong \angle A$  by Reflexive Property of  $\cong$ , and  $\angle B \cong \angle C$  since they are both right angles.

Therefore  $\triangle ABE \sim \triangle ACD$  by AA  $\sim$ .

#### **Example 3 Continued**

#### Step 2 Find CD.

$$\frac{CD}{BE} = \frac{CA}{BA} = \frac{CB + BA}{BA}$$

$$\frac{x}{5} = \frac{3+9}{9}$$

$$x(9) = 5(3 + 9)$$

$$9x = 60$$

$$x = \frac{60}{9} = 6\frac{2}{3}$$

Corr. sides are proportional. Seg. Add. Postulate.

Substitute x for CD, 5 for BE, 3 for CB, and 9 for BA.

Cross Products Prop.

Simplify.

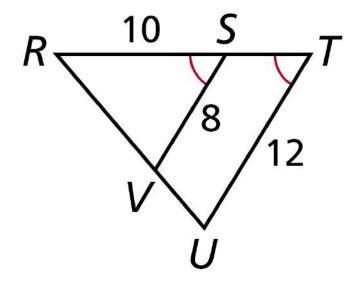

Divide both sides by 9.

Explain why  $\triangle RSV \sim \triangle RTU$  and then find RT.

**Step 1** Prove triangles are similar.

It is given that  $\angle S \cong \angle T$ .  $\angle R \cong \angle R$  by Reflexive Property of  $\cong$ .

Therefore  $\triangle RSV \sim \triangle RTU$  by AA  $\sim$ .

#### **Check It Out! Example 3 Continued**

**Step 2** Find *RT*.

$$\frac{RT}{RS} = \frac{TU}{SV}$$
 Corr. sides are proportional.

$$\frac{RT}{10} = \frac{12}{8}$$
 Substitute RS for 10, 12 for TU, 8 for SV.

$$RT(8) = 10(12)$$
 Cross Products Prop.

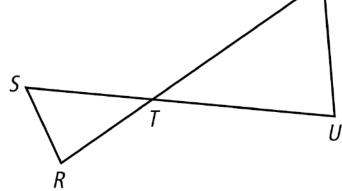

$$8RT = 120$$
 Simplify.

$$RT = 15$$
 Divide both sides by 8.

### **Example 4: Writing Proofs with Similar Triangles**

Given: 3UT = 5RT and 3VT = 5ST

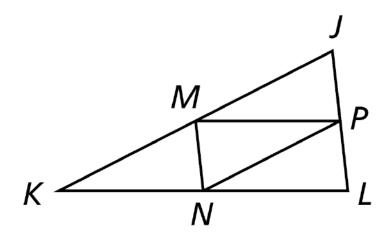

Prove:  $\triangle UVT \sim \triangle RST$ 

# **Example 4 Continued**

Statements	Reasons
<b>1.</b> $3UT = 5RT$	1. Given
$2. \frac{UT}{RT} = \frac{5}{3}$	2. Divide both sides by 3RT.
<b>3.</b> 3 <i>VT</i> = 5 <i>ST</i>	<b>3.</b> Given.
$4. \frac{VT}{ST} = \frac{5}{3}$	4. Divide both sides by3 <i>ST</i> .
<b>5.</b> ∠ <i>RTS</i> ≅ ∠ <i>VTU</i>	<b>5.</b> Vert. ∠s Thm.
<b>6.</b> $\Delta UVT \sim \Delta RST$	6. SAS ~ Steps 2, 4, 5

Given: M is the midpoint of  $\overline{JK}$ . N is the midpoint of  $\overline{KL}$ , and P is the midpoint of  $\overline{JL}$ .

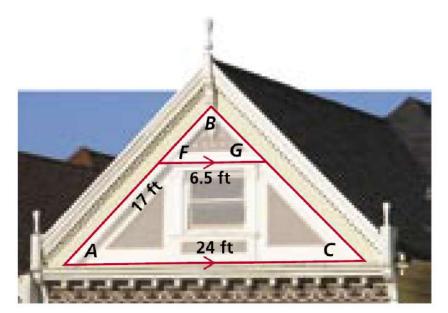

## **Check It Out! Example 4 Continued**

Statements	Reasons
<b>1.</b> $M$ is the mdpt. of $\overline{JK}$ , $N$ is the mdpt. of $\overline{KL}$ , and $P$ is the mdpt. of $\overline{JL}$ .	<b>1.</b> Given
<b>2.</b> $MP = \frac{1}{2}KL$ , $MN = \frac{1}{2}JL$ , $NP = \frac{1}{2}KJ$	<b>2.</b> Δ Midsegs. Thm
$3. \frac{MP}{KL} = \frac{MN}{JL} = \frac{NP}{KJ} = \frac{1}{2}$	<b>3.</b> Div. Prop. of =.
<b>4.</b> $\Delta JKL \sim \Delta NPM$	4. SSS ~ Step 3

#### **Example 5: Engineering Application**

The photo shows a gable roof.  $\overline{AC} \mid \mid \overline{FG}$ .  $\triangle ABC \sim \triangle FBG$ . Find  $\overline{BA}$  to the nearest tenth of a foot.

*From p. 473, BF* ≈ 4.6 *ft.* 

$$BA = BF + FA$$

$$\approx 6.3 + 17$$

$$\approx 23.3 \text{ ft}$$

Therefore, BA = 23.3 ft.

What if...? If AB = 4x, AC = 5x, and BF = 4, find FG.

$$\frac{AB}{AC} = \frac{BF}{FG}$$
 Corr. sides are proportional. 
$$\frac{4x}{5x} = \frac{4}{FG}$$
 Substitute given quantities. 
$$4x(FG) = 4(5x)$$
 Cross Prod. Prop. 
$$FG = 5$$
 Simplify.

You learned in Chapter 2 that the Reflexive, Symmetric, and Transitive Properties of Equality have corresponding properties of congruence. These properties also hold true for similarity of triangles.

#### **Properties of Similarity**

#### Reflexive Property of Similarity

 $\triangle ABC \sim \triangle ABC$  (Reflex. Prop. of  $\sim$ )

#### Symmetric Property of Similarity

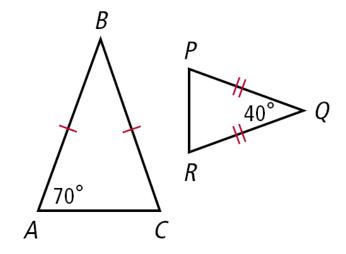

If  $\triangle ABC \sim \triangle DEF$ , then  $\triangle DEF \sim \triangle ABC$ . (Sym. Prop. of  $\sim$ )

#### Transitive Property of Similarity

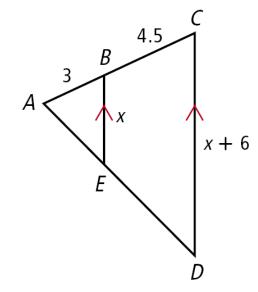

If  $\triangle ABC \sim \triangle DEF$  and  $\triangle DEF \sim \triangle XYZ$ , then  $\triangle ABC \sim \triangle XYZ$ . (Trans. Prop. of  $\sim$ )

#### **Lesson Quiz**

**1.** Explain why the triangles are similar and write a similarity statement.

**2.** Explain why the triangles are similar, then find *BE* and *CD*.

#### **Lesson Quiz**

1. By the Isosc.  $\triangle$  Thm.,  $\angle A \cong \angle C$ , so by the def. of  $\cong$ , m $\angle C = m\angle A$ . Thus m $\angle C = 70^\circ$  by subst. By the  $\triangle$  Sum Thm., m $\angle B = 40^\circ$ . Apply the Isosc.  $\triangle$  Thm. and the  $\triangle$  Sum Thm. to  $\triangle PQR$ . m $\angle R = m\angle P = 70^\circ$ . So by the def. of  $\cong$ ,  $\angle A \cong \angle P$ , and  $\angle C \cong \angle R$ . Therefore  $\triangle ABC \sim \triangle PQR$  by AA  $\sim$ .

2.  $\angle A \cong \angle A$  by the Reflex. Prop. of  $\cong$ . Since  $BE \mid \mid CD$ ,  $\angle ABE \cong \angle ACD$  by the Corr.  $\angle$ s Post. Therefore  $\triangle ABE \sim \triangle ACD$  by AA  $\sim$ . BE = 4 and CD = 10.
