Chapter 14

ASSISTING WITH COMFORT

THE PERSON'S UNIT

- Patient and resident rooms are designed to provide comfort, safety, and privacy.
- The person's unit is the personal space, furniture, and equipment provided for the person by the agency.

Fig. 14-1. Furniture and equipment in a resident's unit. Copyright © 2010 by Mosby, Inc., an affiliate of Elsevier Inc.

Temperature and ventilation

- Most healthy people are comfortable when the temperature is 68° F (Fahrenheit) to 74° F.
- The Omnibus Budget Reconciliation Act of 1987 (OBRA) requires that nursing centers maintain a temperature range of 71° F to 81° F.
- To protect older and ill persons from cool areas and drafts:
 - Keep room temperatures warm.
 - Make sure they wear the correct clothing.
 - Offer lap robes to those in chairs and wheelchairs.
 - Provide enough blankets for warmth.
 - Cover them with bath blankets when giving care.
 - Move them from drafty areas.

Odors

- To reduce odors:
 - Empty, clean, and disinfect bedpans, urinals, commodes, and kidney basins promptly.
 - Make sure toilets are flushed.
 - Check incontinent persons often.
 - Clean persons who are wet or soiled from urine, feces, vomitus, or wound drainage.
 - Change wet or soiled linens and clothing promptly.
 - Keep laundry containers closed.
 - Follow agency policy for wet or soiled linens and clothing.
 - Dispose of incontinence and ostomy products promptly.
 - Provide good hygiene to prevent body and breath odors.
 - Use room deodorizers as needed and allowed by agency policy.

– If you smoke:

- Follow the agency's policy.
- Practice hand washing after handling smoking materials and before giving care.
- Give careful attention to your uniforms, hair, and breath.

Noise

- Common health care sounds may disturb patients and residents.
- To decrease noise:
 - Control your voice.
 - Handle equipment carefully.
 - Keep equipment in good working order.
 - Answer phones, signal lights, and intercoms promptly.

Lighting

- Good lighting is needed for safety and comfort.
- Adjust lighting and window coverings to meet the person's changing needs.
- Keep light controls within the person's reach.
 - This protects the right to personal choice.

Room furniture and equipment

- The bed
 - Beds have electrical or manual controls.
 - Beds are raised horizontally to reduce bending and reaching when giving care.
 - The lowest horizontal position lets the person get out of bed with ease.
 - The head of the bed is flat or raised varying degrees.
- Electric beds may have:
 - Controls on a side panel, bed rail, or the footboard
 - Hand-held devices
- Manual beds have cranks at the foot of the bed.
 - The cranks are pulled up for use.
 - They are kept down at all other times.

Fig. 14-2. Bed controls in the bed rail.

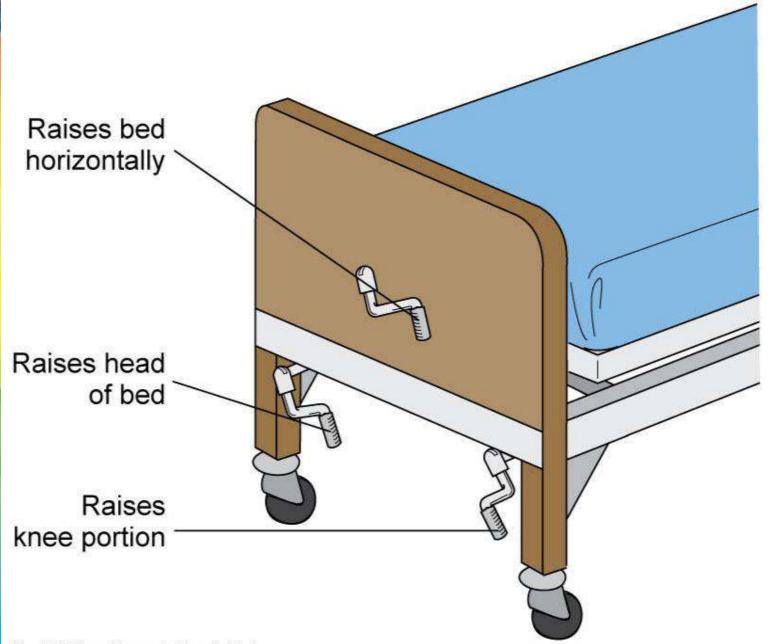

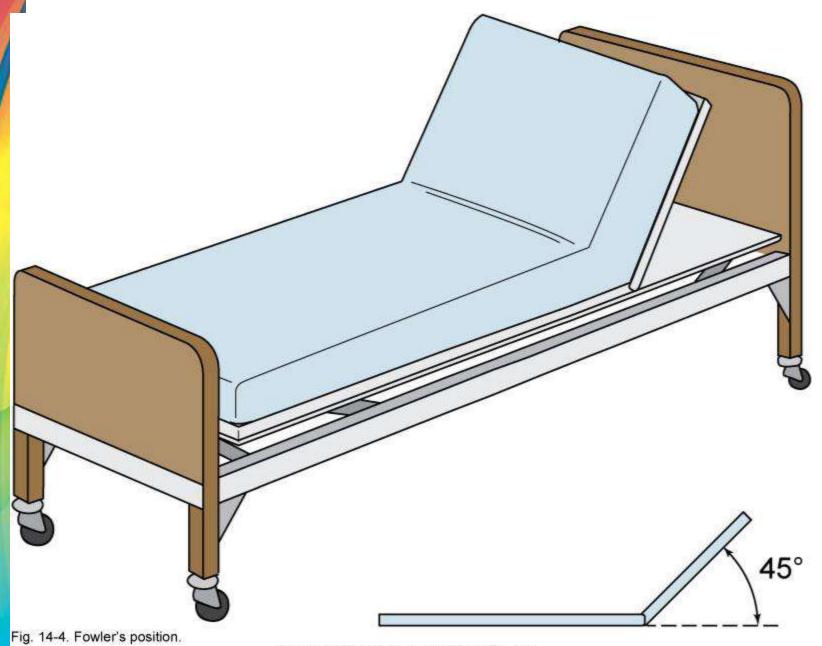

Fig. 14-3. Manually operated hospital bed.

- The six basic bed positions are:
 - The flat position
 - Fowler's position
 - High-Fowler's position
 - Semi-Fowler's position
 - Trendelenburg's position
 - Reverse Trendelenburg's position

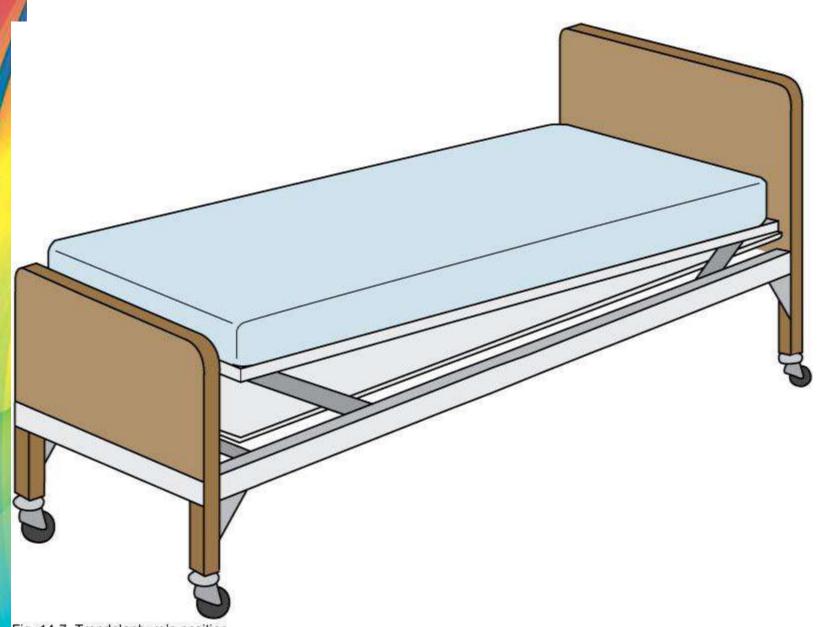

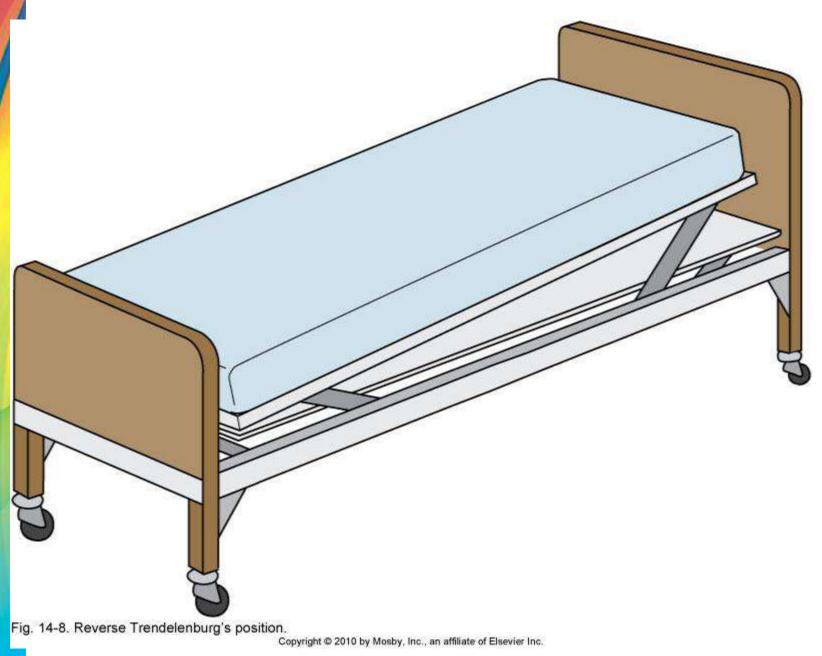

Fig. 14-7. Trendelenburg's position.

- Bed safety involves the hospital bed system.
 - Hospital bed systems have seven entrapment zones.
 - Entrapment means that the person can get caught, trapped, or entangled in spaces created by bed rails, the mattress, the bed frame, the headboard, or footboard.
 - Persons at greatest risk for entrapment include persons who:
 - Are older
 - Are frail
 - Are confused or disoriented
 - Are restless
 - Have uncontrolled body movements
 - Have poor muscle control
 - Are small in size
 - Are restrained
 - Always check the person for entrapment.

Zone 1: Within the rail

Zone 2: Between the top of the compressed mattress and the bottom of the rail, between the supports

Zone 3: Between the rail and the mattress

Zone 4: Between the top of the compressed mattress and the bottom of the rail, at the end of the rail

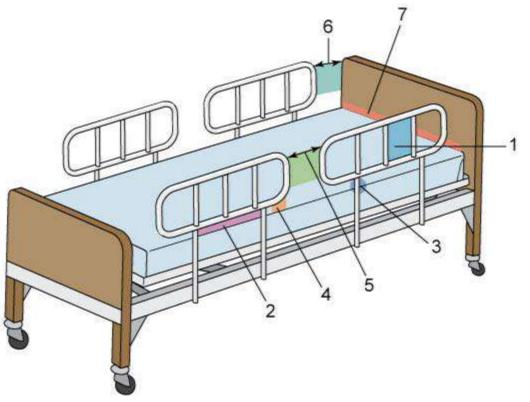

Zone 5: Between the split bed rails

Zone 6: Between the end of the rail and the side edge of the headboard or footboard

Zone 7: Between the head or footboard and the mattress end

(Redrawn from Guidance for industry and FDA staff: hospital bed system dimensional and assessment guidance to reduce entrapment, updated August 19, 2009, Food and Drug Administration.)

Fig. 14-10. Hospital bed system entrapment zones. **G**, Zone 7: Between the headboard or footboard and the end of the mattress.

The overbed table

- The overbed table is placed over the bed by sliding the base under the bed.
- Only clean and sterile items are placed on the table.
- Clean the table after using it for a work surface.

The bedside stand

- The bedside stand has a top drawer and a lower cabinet with shelves or drawers.
- Place only clean and sterile items on top of the bedside stand.
- If you use the bedside stand for a work surface, clean it when you are done.

Chairs

- The person's unit always has at least one chair.
- The chair must:
 - Be comfortable and sturdy
 - Not move or tip during transfers
 - Allow the person to get in and out of it with ease

Privacy curtains

- Each person has the right to full visual privacy (to be completely free from public view while in bed).
- Always pull the privacy curtain completely around the bed before giving care.
- Remember, privacy curtains do not block sounds or conversations.

- The call system

- The call system lets the person signal for help.
- Always keep the signal light within the person's reach.
- An intercom system lets a nursing team member talk with the person from the nurses' station.
 - When using an intercom, remember confidentiality.
- Persons with limited hand mobility may need a signal light that is turned on by tapping it with a hand or fist.

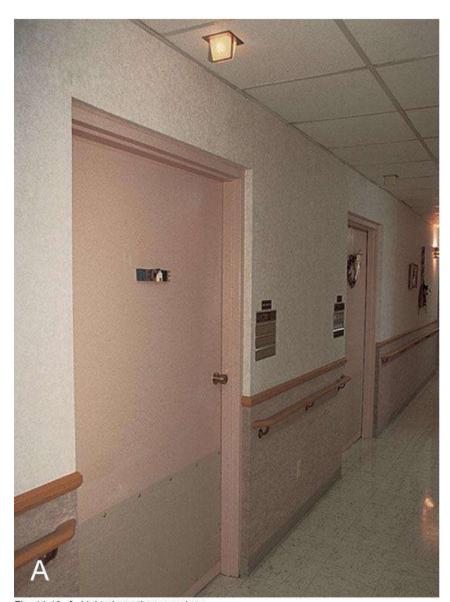

Fig. 14-13. **A,** Light above the room door.

- Some people cannot use signal lights.
 - Check the care plan for special communication measures.
 - Check these persons often.
 - Make sure their needs are met.
- You must:
 - Keep the signal light within the person's reach.
 - Place the signal light on the person's strong side.
 - Remind the person to signal when help is needed.
 - Answer signal lights promptly.
 - Answer bathroom and shower or tub room signal lights at once.

Fig. 14-14. Signal light for a person with limited hand mobility.

The bathroom

- A toilet, sink, call system, and mirror are standard equipment in bathrooms.
- For safety, grab bars are by the toilet.
- Some bathrooms have raised toilet seats.
 - They make wheelchair transfers easier.
 - They are helpful for persons with joint problems.
- The bathroom signal light flashes above the room door and at the nurses' station.
 - The sound at the nurses' station is different from the sound made by signal lights in rooms.

- Closet and drawer space are provided.
 - OBRA requires closet space for each nursing center resident.
 - The space must have shelves and a clothes rack.
 - The person must have free access to the closet and its contents.
 - Items in closets and drawers are the person's private property.
- Many agencies furnish rooms with other equipment.
- Residents may bring some furniture and other items from home.

BEDMAKING

- Clean, dry, and wrinkle-free linens:
 - Promote comfort
 - Prevent skin breakdown and pressure ulcers
- To keep beds neat and clean:
 - Straighten linens whenever loose or wrinkled and at bedtime.
 - Check for and remove food and crumbs after meals.
 - Check linens for dentures, eyeglasses, hearing aids, sharp objects, and other items.
 - Change linens whenever they become wet, soiled, or damp.
 - Follow Standard Precautions and the Bloodborne Pathogen Standard.

Types of beds

- A closed bed is not in use.
 - The bed is ready for a new patient or resident.
 - In nursing centers, closed beds are made for residents who are up during the day.
- An open bed is in use.
 - Top linens are fan-folded back so the person can get into bed.
- An occupied bed is made with the person in it.
- A surgical bed is made:
 - To transfer a person from a stretcher
 - For persons who arrive by ambulance

Fig. 14-18. Surgical bed.

Linens

- Collect linens in the order you will use them.
- Place the clean linen on a clean surface.
- Remove dirty linen one piece at a time.
 - Roll each piece away from you.
 - Discard each piece into the laundry bag.
- Wet, damp, or soiled linens are changed right away.
 - Wear gloves and follow Standard Precautions and the Bloodborne Pathogen Standard.

Fig. 14-20. Roll dirty linen away from you.

Drawsheets

- A drawsheet is a small sheet placed over the middle of the bottom sheet.
- A cotton drawsheet helps keep the mattress and bottom linens clean.
- A waterproof drawsheet is placed between the bottom sheet and the cotton drawsheet.
- Many agencies use incontinence products, waterproof pads, or disposable bed protectors.
- Cotton drawsheets are often used without waterproof drawsheets.
- When cotton drawsheets are used as assist devices, do not tuck them in at the sides.

Making beds

- The closed bed is made:
 - After a person is discharged
 - For a new patient or resident
 - In nursing centers, for residents who are up for most or all of the day
- The open bed is made for:
 - Newly admitted persons arriving by wheelchair
 - Persons who are getting ready for bed
 - Persons who are out of bed for a short time

- You make an occupied bed when the person stays in bed.
 - Keep the person in good alignment.
 - Follow restrictions or limits in the person's movement or position.
 - Explain each procedure step to the person before it is done.
- The surgical bed (recovery bed or post-operative bed) is made for persons:
 - Returning to their rooms from surgery
 - Arriving at the agency by ambulance
 - Taken by stretcher to treatment or therapy areas
 - Using portable tubs

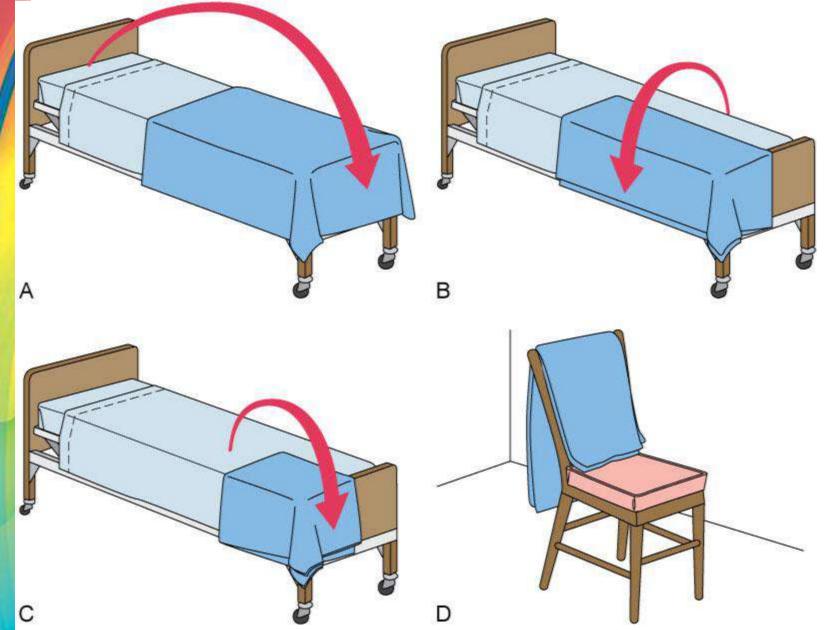

Fig. 14-29. Folding linen for re-use. **A**, Fold the top edge of the bedspread down to the bottom edge. **B**, Fold the bedspread from the far side of the bed to the near side. **C**, Fold the top edge of the bedspread down to the bottom edge again. **D**, Place the folded bedspread over the back of the chair.

ASSISTING WITH PAIN RELIEF

- Pain means to ache, hurt, or be sore.
- Pain is subjective.
 - You must rely on what the person says.
- The nurse uses the nursing process to promote comfort and relieve pain.
- Report the person's complaints and your observations to the nurse.

- Factors affecting pain
 - Past experience
 - Anxiety
 - Rest and sleep
 - Personal and family duties
 - The value or meaning of pain
 - Support from others
 - Culture
 - Illness
 - Age

PROMOTING SLEEP

- Sleep is a basic need.
 - The mind and body rest.
 - The body saves energy.
 - Body functions slow.
 - Vital signs are lower than when awake.
 - Tissue healing and repair occur.
 - Sleep lowers stress, tension, and anxiety.
 - It refreshes and renews the person.
 - The person regains energy and mental alertness.

- The nurse uses the nursing process to promote sleep.
 - Report your observations about how the person slept.
- Factors affecting sleep
 - Illness increases the need for sleep.
 - Nutrition (Food can promote or prevent sleep.)
 - Exercise causes the release of substances into the bloodstream that stimulate the body.
 - Environment
 - Drugs and other substances
 - Emotional problems

- Sleep disorders involve repeated sleep problems.
 - The amount and quality of sleep are affected.
 - Insomnia is a chronic condition in which the person cannot sleep or stay asleep all night.
 - Sleep deprivation means that the amount and quality of sleep are decreased.
 - Sleep is interrupted.
 - Sleep-walking is when the person leaves the bed and walks about.
