Be a leader in your community.

Did you know?

As the largest industry in 2004, health care provided 13.5 million jobs—13.1 million jobs for wage and salary workers and about 411,000 jobs for the self-employed.

8 out of 20 occupations projected to grow the fastest are in health care. More new wage and salary jobs—about 19 percent, or 3.6 million—created between 2004 and 2014 will be in health care than in any other industry.

Physicians, biologists, chemists, hospital and health service administrators are considered nontraditional careers for women. Nontraditional occupations are jobs in which women comprise 25% or less of the workforce.

Women in a nontraditional occupation earn higher wages, better benefits, opportunity for advancement and job satisfaction.

Most workers have jobs that require less than 4 years of college education, but health diagnosing and treating practitioners are among the most educated workers.
