

Math Practice for Home

The following list of math activities will be coming home for practice. It is the first grade expectation that the children master the addition and subtraction facts and strategies by June. Mastery means that the children can figure out the answers in their heads when they see the problem without using their fingers or manipulatives. They should be able to give the answers to the math facts in three seconds or less if the facts are mastered. Some of the facts will only take a week to master. Others may take longer.

The children will be tested once a week. If your child masters the facts for the week in the allotted time, they will be given the next set of math facts to practice for the following week. If your child does not master the facts for the week, they will need to continue working on the same facts, and will be tested on those same facts again for the following week.

Here is the order in which the math facts will be sent home:
