401 Federal Street, Suite 2  
Dover, DE 19901

# Table of Contents

INTRODUCTION.....	1
<b>OPERATIONS AND ALGEBRAIC THINKING (OA).....</b>	<b>6</b>
<i>Cluster: Use the four operations with whole numbers to solve problems.....</i>	<i>7</i>
<b>4.OA.1</b> – Interpret a multiplication equation as a comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.....	7
<b>4.OA.2</b> – Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison. (See Glossary, Table 2, in CCSS document.) .....	9
<b>4.OA.3</b> – Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.....	10
<i>Cluster: Gain familiarity with factors and multiples.....</i>	<i>13</i>
<b>4.OA.4</b> – Find all factor pairs for a whole number in the range 1-100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1-100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1-100 is prime or composite.....	13
<i>Cluster: Generate and analyze patterns.....</i>	<i>14</i>
<b>4.OA.5</b> – Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself. <i>For example, given the rule "Add 3" and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers. Explain informally why the numbers will continue to alternate in this way.....</i>	14
<b>NUMBER AND OPERATIONS IN BASE TEN (NBT).....</b>	<b>15</b>
<i>Cluster: Generalize place value understanding for multi-digit whole numbers.....</i>	<i>16</i>
<b>4.NBT.1</b> – Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. <i>For example, recognize that <math>700 \div 70 = 10</math> by applying concepts of place value and division.....</i>	16
<b>4.NBT.2</b> – Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using $>$ , $=$ , and $<$ symbols to record the results of comparisons.....	17
<b>4.NBT.4</b> – Fluently add and subtract multi-digit whole numbers using the standard algorithm...	20
<b>4.NBT.5</b> – Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models. ....	21

**4.NBT.6** – Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models. .... 22

**NUMBER AND OPERATIONS—FRACTIONS (NF) ..... 23**

**Cluster: *Extend understanding of fraction equivalence and ordering.* ..... 24**

**4.NF.1** – Explain why a fraction  $a/b$  is equivalent to a fraction  $(n \times a)/(n \times b)$  by using visual fraction models, with attention to how the number and size of the parts differ even though the two fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions. .... 24

**4.NF.2** – Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as  $1/2$ . Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols  $>$ ,  $=$ , or  $<$ , and justify the conclusions, e.g., by using a visual fraction model. .... 26

**Cluster: *Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers.* ..... 29**

**4.NF.3** – Understand a fraction  $a/b$  with  $a > 1$  as a sum of fractions  $1/b$ . .... 29

**4.NF.4** – Apply and extend previous understandings of multiplication to multiply a fraction by a whole number. .... 33

**Cluster: *Understand decimal notation for fractions, and compare decimal fractions.*.... 35**

**4.NF.5** – Express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and 100. *For example, express  $3/10$  as  $30/100$  and add  $3/10 + 4/100 = 34/100$ .* ..... 35

**4.NF.6** – Use decimal notation for fractions with denominators 10 or 100. *For example, rewrite  $0.62$  as  $62/100$ ; describe a length as  $0.62$  meters; locate  $0.62$  on a number line diagram.* ..... 36

**4.NF.7** – Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when two decimals refer to the same whole. Record the results of comparisons with the symbols  $>$ ,  $=$ , or  $<$ , and justify the conclusions, e.g., by using a visual model. .... 37

**MATHEMATICS AND DATA (MD)..... 38**

**Cluster: *Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit.* ..... 39**

**4.MD.1** – Know relative sizes of measurement units within one system of units including km, m, cm; kg, g; lb, oz.; l, ml; hr, min, sec. Within a single system of measurement, express measurements in a larger unit in terms of smaller unit. Record measurement equivalents in a two-column table. *For example: know that 1 ft is 12 times as long as 1 in. Express the length of a 4 ft snake as 48 in. Generate a conversion table for feet and inches listing the number pairs (1, 12), (2, 24), (3, 36), ....* ..... 39

4.MD.2 – Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit. Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale. ....	41
4.MD.3 – Apply the area and perimeter formulas for rectangles in real world and mathematical problems. <i>For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.</i> ...	42
<b>Cluster: Represent and interpret data.</b> .....	<b>46</b>
4.MD.4 – Make a line plot to display a data set of measurements in fractions of a unit ( $\frac{1}{2}$ , $\frac{1}{4}$ , $\frac{1}{8}$ ). Solve problems involving addition and subtraction of fractions by using information presented in line plots. <i>For example, from a line plot find and interpret the difference in length between the longest and shortest specimens in an insect collection.</i> .....	46
<b>Cluster: Geometric measurement: understand concepts of angle and measure angles.</b> .	<b>48</b>
4.MD.6 – Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure. ....	48
4.MD.7 – Geometric measurement: understand concepts of angle and measure angles. Recognize angle measure as additive. When an angle is decomposed into non-overlapping parts, the angle measure of the whole is the sum of the angle measures of the parts. Solve addition and subtraction problems to find unknown angles on a diagram in real world and mathematical problems, e.g., by using an equation with a symbol for the unknown angle measure. ....	49
<b>GEOMETRY (G)</b> .....	<b>50</b>
<b>Cluster: Draw and identify lines and angles, and classify shapes by properties of their lines and angles.</b> .....	<b>51</b>
4.G.1 – Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel line. Identify these in two-dimensional figures. ....	51
4.G.2 – Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of specified size. Recognize right triangles as a category, and identify right triangles. ....	53
4.G.3 – Recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts. Identify line-symmetric figures and draw lines of symmetry.....	54
<b>ANSWER KEY AND ITEM RUBRICS</b> .....	<b>55</b>
<i>Operations and Algebraic Thinking (OA)</i> .....	<b>56</b>
<i>Number and Operations in Base Ten (NBT)</i> .....	<b>60</b>

<i>Measurement and Data (MD)</i> .....	<b>68</b>
<i>Geometry (G)</i> .....	<b>73</b>
<b>PERFORMANCE TASK</b> .....	<b>75</b>

## INTRODUCTION

The purpose of this document is to illustrate the differences between the Delaware Comprehensive Assessment System (DCAS) and the expectations of the next-generation Common Core State Standard (CCSS) assessment in Mathematics. A side-by-side comparison of the current design of an operational assessment item and the expectations for the content and rigor of a next-generation Common Core mathematical item are provided for each CCSS. The samples provided are designed to help Delaware’s educators better understand the instructional shifts needed to meet the rigorous demands of the CCSS. This document does not represent the test specifications or blueprints for each grade level, for DCAS, or the next-generation assessment.

For mathematics, next-generation assessment items were selected for CCSS that represent the shift in content at the new grade level. Sites used to select the next-generation assessment items include:

- [Smarter Balanced Assessment Consortium](#)
- [Partnership of Assessment of Readiness for College and Career](#)
- [Illustrative Mathematics](#)
- [Mathematics Assessment Project](#)

Using [released items from other states](#), a DCAS-like item, aligned to the same CCSS, was chosen. These examples emphasize the contrast in rigor between the previous Delaware standards, known as Grade-Level Expectations, and the Common Core State Standards.

Section 1, DCAS-Like and Next-Generation Assessment Comparison, includes content that is in the CCSS at a different “rigor” level. The examples are organized by the CCSS. For some standards, more than one example may be given to illustrate the different components of the standard. Additionally, each example identifies the standard and is separated into two parts. Part A is an example of a DCAS-like item, and Part B is an example of a next-generation item based on CCSS.

Section 2 includes at least one Performance Task that addresses multiple aspects of the CCSS (content and mathematical practices).

### How to Use Various Aspects of This Document

- Analyze the way mathematics standards are conceptualized in each item or task.
- Identify the instructional shifts that need to occur to prepare students to address these more rigorous demands. Develop a plan to implement the necessary instructional changes.
- Notice how numbers (e.g., fractions instead of whole numbers) are used in the sample items.
- Recognize that the sample items and tasks are only one way of assessing the standard.
- Understand that the sample items and tasks do not represent a mini-version of the next-generation assessment.
- Instruction should address “focus,” coherence,” and “rigor” of mathematics concepts.
- Instruction should embed mathematical practices when teaching mathematical content.

## Common Core Assessment Comparison for Mathematics – Grade 4

- For grades K–5, calculators should not be used as the concepts of number sense and operations are fundamental to learning new mathematics content in grades 6–12.
- The next-generation assessment will be online and the scoring will be done electronically. It is important to note that students may not be asked to show their work and therefore will not be given partial credit. It is suggested when using items within this document in the classroom for formative assessments, it is good practice to have students demonstrate their methodology by showing or explaining their work.

Your feedback is welcome. Please do not hesitate to contact Katia Foret at [katia.foret@doe.k12.de.us](mailto:katia.foret@doe.k12.de.us) or Rita Fry at [rita.fry@doe.k12.de.us](mailto:rita.fry@doe.k12.de.us) with suggestions, questions, and/or concerns.

\* The Smarter Balanced Assessment Consortium has a 30-item practice test available for each grade level (3-8 and 11) for mathematics and ELA (including reading, writing, listening, and research). These practice tests allow students to experience items that look and function like those being developed for the Smarter Balanced assessments. The practice test also includes performance tasks and is constructed to follow a test blueprint similar to the blueprint intended for the operational test. The Smarter Balanced site is located at: <http://www.smarterbalanced.org/>.

## Priorities in Mathematics

<b>Grade</b>	<b>Priorities in Support of Rich Instruction and Expectations of Fluency and Conceptual Understanding</b>
<b>K–2</b>	Addition and subtraction, measurement using whole number quantities
<b>3–5</b>	Multiplication and division of whole numbers and fractions
<b>6</b>	Ratios and proportional reasoning; early expressions and equations
<b>7</b>	Ratios and proportional reasoning; arithmetic of rational numbers
<b>8</b>	Linear algebra

### Common Core State Standards for Mathematical Practices

Mathematical Practices	Student Dispositions:	Teacher Actions to Engage Students in Practices:
Essential Processes for a Productive Math Thinker	<b>1. Make sense of problems and persevere in solving them</b> <ul style="list-style-type: none"> <li>▪ Have an understanding of the situation</li> <li>▪ Use patience and persistence to solve problem</li> <li>▪ Be able to use different strategies</li> <li>▪ Use self-evaluation and redirections</li> <li>▪ Communicate both verbally and written</li> <li>▪ Be able to deduce what is a reasonable solution</li> </ul>	<ul style="list-style-type: none"> <li>▪ Provide open-ended and rich problems</li> <li>▪ Ask probing questions</li> <li>▪ Model multiple problem-solving strategies through Think-Aloud</li> <li>▪ Promote and value discourse</li> <li>▪ Integrate cross-curricular materials</li> <li>▪ Promote collaboration</li> <li>▪ Probe student responses (correct or incorrect) for understanding and multiple approaches</li> <li>▪ Provide scaffolding when appropriate</li> <li>▪ Provide a safe environment for learning from mistakes</li> </ul>
	<b>6. Attend to precision</b> <ul style="list-style-type: none"> <li>▪ Communicate with precision—orally and written</li> <li>▪ Use mathematics concepts and vocabulary appropriately</li> <li>▪ State meaning of symbols and use them appropriately</li> <li>▪ Attend to units/labeling/tools accurately</li> <li>▪ Carefully formulate explanations and defend answers</li> <li>▪ Calculate accurately and efficiently</li> <li>▪ Formulate and make use of definitions with others</li> <li>▪ Ensure reasonableness of answers</li> <li>▪ Persevere through multiple-step problems</li> </ul>	<ul style="list-style-type: none"> <li>▪ Encourage students to think aloud</li> <li>▪ Develop explicit instruction/teacher models of thinking aloud</li> <li>▪ Include guided inquiry as teacher gives problem, students work together to solve problems, and debrief time for sharing and comparing strategies</li> <li>▪ Use probing questions that target content of study</li> <li>▪ Promote mathematical language</li> <li>▪ Encourage students to identify errors when answers are wrong</li> </ul>
Reasoning and Explaining	<b>2. Reason abstractly and quantitatively</b> <ul style="list-style-type: none"> <li>▪ Create multiple representations</li> <li>▪ Interpret problems in contexts</li> <li>▪ Estimate first/answer reasonable</li> <li>▪ Make connections</li> <li>▪ Represent symbolically</li> <li>▪ Talk about problems, real-life situations</li> <li>▪ Attend to units</li> <li>▪ Use context to think about a problem</li> </ul>	<ul style="list-style-type: none"> <li>▪ Develop opportunities for problem-solving strategies</li> <li>▪ Give time for processing and discussing</li> <li>▪ Tie content areas together to help make connections</li> <li>▪ Give real-world situations</li> <li>▪ Demonstrate thinking aloud for students' benefit</li> <li>▪ Value invented strategies and representations</li> <li>▪ More emphasis on the process instead of on the answer</li> </ul>
	<b>3. Construct viable arguments and critique the reasoning of others</b> <ul style="list-style-type: none"> <li>▪ Ask questions</li> <li>▪ Use examples and counter examples</li> <li>▪ Reason inductively and make plausible arguments</li> <li>▪ Use objects, drawings, diagrams, and actions</li> <li>▪ Develop ideas about mathematics and support their reasoning</li> <li>▪ Analyze others arguments</li> <li>▪ Encourage the use of mathematics vocabulary</li> </ul>	<ul style="list-style-type: none"> <li>▪ Create a safe environment for risk-taking and critiquing with respect</li> <li>▪ Provide complex, rigorous tasks that foster deep thinking</li> <li>▪ Provide time for student discourse</li> <li>▪ Plan effective questions and student grouping</li> <li>▪ Probe students</li> </ul>

Common Core Assessment Comparison for Mathematics – Grade 4

	Mathematical Practices	Students:	Teacher(s) promote(s) by:
Modeling and Using Tools	4. Model with mathematics	<ul style="list-style-type: none"> <li>Realize that mathematics (numbers and symbols) is used to solve/work out real-life situations</li> <li>Analyze relationships to draw conclusions</li> <li>Interpret mathematical results in context</li> <li>Show evidence that they can use their mathematical results to think about a problem and determine if the results are reasonable—if not, go back and look for more information</li> <li>Make sense of the mathematics</li> </ul>	<ul style="list-style-type: none"> <li>Allowing time for the process to take place (model, make graphs, etc.)</li> <li>Modeling desired behaviors (think alouds) and thought processes (questioning, revision, reflection/written)</li> <li>Making appropriate tools available</li> <li>Creating an emotionally safe environment where risk-taking is valued</li> <li>Providing meaningful, real-world, authentic, performance-based tasks (non-traditional work problems)</li> <li>Promoting discourse and investigations</li> </ul>
	5. Use appropriate tools strategically	<ul style="list-style-type: none"> <li>Choose the appropriate tool to solve a given problem and deepen their conceptual understanding (paper/pencil, ruler, base ten blocks, compass, protractor)</li> <li>Choose the appropriate technological tool to solve a given problem and deepen their conceptual understanding (e.g., spreadsheet, geometry software, calculator, web 2.0 tools)</li> <li>Compare the efficiency of different tools</li> <li>Recognize the usefulness and limitations of different tools</li> </ul>	<ul style="list-style-type: none"> <li>Maintaining knowledge of appropriate tools</li> <li>Modeling effectively the tools available, their benefits, and limitations</li> <li>Modeling a situation where the decision needs to be made as to which tool should be used</li> <li>Comparing/contrasting effectiveness of tools</li> <li>Making available and encouraging use of a variety of tools</li> </ul>
Seeing Structure and Generalizing	7. Look for and make use of structure	<ul style="list-style-type: none"> <li>Look for, interpret, and identify patterns and structures</li> <li>Make connections to skills and strategies previously learned to solve new problems/tasks independently and with peers</li> <li>Reflect and recognize various structures in mathematics</li> <li>Breakdown complex problems into simpler, more manageable chunks</li> <li>“Step back” or shift perspective</li> <li>Value multiple perspectives</li> </ul>	<ul style="list-style-type: none"> <li>Being quiet and structuring opportunities for students to think aloud</li> <li>Facilitating learning by using open-ended questions to assist students in exploration</li> <li>Selecting tasks that allow students to discern structures or patterns to make connections</li> <li>Allowing time for student discussion and processing in place of fixed rules or definitions</li> <li>Fostering persistence/stamina in problem solving</li> <li>Allowing time for students to practice</li> </ul>
	8. Look for and express regularity in repeated reasoning	<ul style="list-style-type: none"> <li>Identify patterns and make generalizations</li> <li>Continually evaluate reasonableness of intermediate results</li> <li>Maintain oversight of the process</li> <li>Search for and identify and use shortcuts</li> </ul>	<ul style="list-style-type: none"> <li>Providing rich and varied tasks that allow students to generalize relationships and methods and build on prior mathematical knowledge</li> <li>Providing adequate time for exploration</li> <li>Providing time for dialogue, reflection, and peer collaboration</li> <li>Asking deliberate questions that enable students to reflect on their own thinking</li> <li>Creating strategic and intentional check-in points during student work time</li> </ul>

For classroom posters depicting the Mathematical Practices, please see: <http://seancarberry.cmswiki.wikispaces.net/file/detail/12-20math.docx>

**1A**

Alison ran a total of 200 miles over 8 weeks. She ran the same number of miles each week. The number sentence below can be used to find the number of miles,  $m$ , she ran each week.

$$m \times 8 = 200$$

How many miles,  $m$ , did Alison run each week?

- A. 4 miles
- B. 25 miles
- C. 40 miles
- D. 192 miles

## Next-Generation

## 1B

Hannah was doing a report on animals' sleep habits. She made the charts below to show the number of hours certain animals usually sleep each day.

Animal	Bat	Mouse	Guinea Pig	Possum	Gray Seal
Hours of Sleep	20 hours	12 hours	9 hours	18 hours	6 hours

Animal	Tiger	Horse	Cheetah	Cow	Goat
Hours of Sleep	16 hours	3 hours	12 hours	4 hours	15 hours

- a. Fill in the blanks to make the statements true.
- A possum sleeps \_\_\_\_\_ times as many hours a day as a guinea pig.
  - A bat sleeps \_\_\_\_\_ times as many hours per day as a cow.
- b. Write a multiplication equation to show the relationship between the length of time a gray seal sleeps and the length of time a possum sleeps.

$$\underline{\hspace{2cm}} \times \underline{\hspace{2cm}} = \underline{\hspace{2cm}}$$

- c. When Hannah was reading about donkeys, she said, "I can't believe that goats sleep 5 times as many hours per day as donkeys." Find the number of hours per day a donkey sleeps. Show your thinking below using words, numbers, and/or pictures.

A donkey sleeps \_\_\_\_\_ hours per day.

**4.OA.2** – Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison. (See Glossary, Table 2, in CCSS document.)

Last summer, Max earned 5 stickers for every book he read. He earned 40 stickers in all for reading books.

Which number sentence could be used to find  $b$ , the number of books Max read?

- A.  $b \div 5 = 40$
- B.  $5 + b = 40$
- C.  $b - 5 = 40$
- D.  $5 \times b = 40$

**2B**

Sarah is 12 years old.

- George is  $g$  years old.
- Sarah is 3 times as old as George.

For items a.-c., choose **Yes** or **No** to indicate whether each statement is true.

- a. George's age, in years, can be represented by the expression  $12 \div 3$ .       Yes     No
- b. George is 15 years old.       Yes     No
- c. George's age, in years, can be found by solving the equation  $12 = 3 \times g$ .       Yes     No

**4.OA.3** – Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Every year a carnival comes to Hallie's town. The price of tickets to ride the rides has gone up every year.

Year	Ticket Price
2008	\$2.00
2009	\$2.50
2010	\$3.00
2011	\$3.50
2012	\$4.00

- a. In 2008, Hallie's allowance was \$9.00 a month. How many carnival tickets could she buy with one month's allowance?
- \_\_\_\_\_
- b. If her allowance had stayed the same, \$9.00 a month, how many carnival tickets could she buy in 2012?
- \_\_\_\_\_
- c. In 2012, Hallie's allowance was \$14.00 per month. How much did her monthly allowance increase between 2008 and 2012?
- \_\_\_\_\_
- d. How much more did a carnival ticket cost in 2012 than it did in 2008?
- \_\_\_\_\_
- e. Was Hallie able to buy more carnival tickets in 2008 or in 2012 with one month's allowance?
- \_\_\_\_\_
- f. What would Hallie's allowance need to be in 2012 in order for her to be able to buy as many carnival tickets as she could in 2008?
- \_\_\_\_\_
- g. What happens to your ability to buy things if prices increase and your allowance doesn't increase?
- \_\_\_\_\_
-

**4.OA.3** – Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.

Jason and Laura were at the soccer game. Jason told Laura that his two daughters, Penny and Lily, were celebrating birthdays that week. He didn't tell Laura how old they were. Instead he gave Laura these clues about their ages.

- Each of their ages is a factor of 24.
- 36 is a multiple of both Penny's age and Lily's age.
- 30 is a multiple of Lily's age, but not Penny's age.
- The sum of their ages is 14.

Use Jason's clues, the chart, and the space below to help figure what Penny and Lily's ages are.

Penny	Lily	Sum

Identify Penny and Lily's ages and explain how you figured out how old the girls are.

**Cluster: Generate and analyze patterns.**

**4.OA.5** – Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself. *For example, given the rule "Add 3" and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers. Explain informally why the numbers will continue to alternate in this way.*

A survey asked students to identify their favorite ride at an amusement park. The bar graph below shows the results of 100 students' answers to the survey.

Which circle graph correctly shows the results of the survey?

## Next-Generation

## 27B

Jessica has been collecting data for a project. Her data is as follows. She forgot to label her data.

Sample	1	2	3	4	5	6	7	8	9	10	11	12
Length (in.)	$\frac{7}{8}$	$\frac{3}{8}$	$\frac{6}{8}$	$\frac{5}{8}$	1	$\frac{5}{8}$	$\frac{3}{8}$	$\frac{7}{8}$	$\frac{1}{8}$	$\frac{1}{2}$	1	$\frac{1}{8}$

Sample	13	14	15	16	17	18	19	20	21	22	23	24
Length (in.)	$\frac{7}{8}$	$\frac{3}{8}$	$\frac{1}{2}$	1	$\frac{6}{8}$	$\frac{5}{8}$	$\frac{3}{8}$	1	$\frac{7}{8}$	$\frac{5}{8}$	$\frac{3}{8}$	$\frac{6}{8}$

- Display the data on a line plot
- Label your line plot
- Create a situation that would fit the set of data given
- Give three interpretations from the given set of data

What is the difference between the shortest and longest length?

*Cluster: Geometric measurement: understand concepts of angle and measure angles.*

**4.MD.6** – Measure angles in whole-number degrees using a protractor. Sketch angles of specified measure.

DCAS-Like

**28A**

Which is the estimated measure of this angle?

- A.  $10^\circ$
- B.  $40^\circ$
- C.  $90^\circ$
- D.  $120^\circ$

Next-Generation

**28B**

This drawing shows several angles on a protractor.

- a. Name one angle that appears to be a right angle. \_\_\_\_\_
- b. Name one angle that appears to be an obtuse angle. \_\_\_\_\_

**4.MD.7** – Geometric measurement: understand concepts of angle and measure angles. Recognize angle measure as additive. When an angle is decomposed into non-overlapping parts, the angle measure of the whole is the sum of the angle measures of the parts. Solve addition and subtraction problems to find unknown angles on a diagram in real world and mathematical problems, e.g., by using an equation with a symbol for the unknown angle measure.

DCAS-Like Answer	Next-Generation Solution
<p><b>5A:</b> A (4.OA.4)</p>	<p><b>5B:</b> Students should ultimately indicate that Penny is 12 and Lily is 2. Common errors for this task would be for students to identify a pair of ages that meets some but not all of the given criteria. For example, they might select 10 for Lily’s age and 4 for Penny’s age. These ages would meet some of the criteria (sum of 14, 30 is a multiple of 10 but not 4, 36 is a multiple of 4, 4 is a factor of 24) but not others (10 is not a factor of 24 and 36 is not a multiple of 10). Teachers should cover prime and composite terminology when solving such problems. Note: The students’ work can be helpful in determining whether students have a plan or strategy finding factors (i.e., finding them in pairs or beginning with a low number and working up) or if students seem to be using a more random, guess-and-check style method.</p>
<p><b>6A:</b> B (4.OA.5)</p>	<p><b>6B:</b> Answer may be similar to the following: Each day Laura finds 5 more shells than she did the day before. I made a table showing the day and the number of shells Laura found. The rule for this table is +5. If you keep adding +5 until you get to the 8<sup>th</sup> day, you will find out that Laura found 38 shells on the 8<sup>th</sup> day.</p>

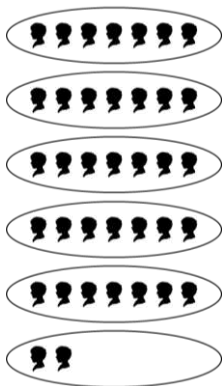

*Number and Operations in Base Ten (NBT)*

DCAS-Like Answer	Next-Generation Solution
<p><b>7A: A</b> (4.NBT.1)</p>	<p><b>7B:</b> Students should identify that the 7 in Bill’s number is 10 times the size of the 7 in Tom’s number. Their work should show an understanding that the 7 in Bill’s number is worth 700 and the 7 in Tom’s number is worth 70, and 700 is ten times the size of 70.  When scoring this task, you may choose to use the level of student work to distinguish between a 3 and a 2 or a 2 and a 1. If you decide to account for the student’s work when grading, it is important to make sure the students know in advance of working that the task will be graded based on the correct answers and their work.</p>
<p><b>8A: D</b> (4.NBT.2)</p>	<p><b>8B:</b> <i>Key:</i> YYYN <i>Scoring Rubric</i> Responses to this item will receive 0-2 points based on the following: <b>2 points:</b> YYYN – The student thoroughly understands place value in multi-digit whole numbers. <b>1 point:</b> YYNN, YNYN, NYYN – The student partially understands place value in multi-digit whole numbers. The student does not fully understand that, in multi-digit whole numbers, values can be represented in word form, standard form, and expanded form as well as in many other ways. <b>0 points:</b> YYYYY, YNNN, YNYY, YYNY, YNNY, NNNN, NYYY, NNNY, NNNY, NYNN, NNNY, NYNY – The student has little or inconsistent understanding of place value in multi-digit whole numbers. The student only answered one part correctly. OR The student thought the answer to item d. (which serves to confirm no understanding) was “Yes.”</p>
<p><b>9A: C</b> (4.NBT.2)</p>	<p><b>9B:</b> a. Any digit 0 through 6 b. Any digit 3 through 9 c. The digit 9 only</p>

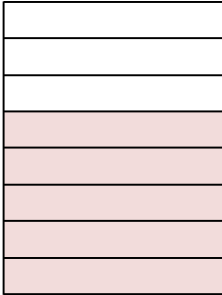

DCAS-Like Answer	Next-Generation Solution
<p><b>16A: B</b> (4.NF.2)</p>	<p><b>16B:</b> Key: False, False, False, True</p>
<p><b>17A: D</b> (4.NF.2)</p>	<p><b>17B:</b> a. No b. No c. Yes d. No</p>
<p><b>18A: D</b> (4.NF.3)</p>	<p><b>18B:</b> Each part of this task is scored separately and earns 1 point for the correct response. <i>Part A</i> <math>\frac{4}{12}</math> or <math>\frac{1}{3}</math> <i>Part B</i> <math>\frac{8}{12}</math> or <math>\frac{2}{3}</math></p>
<p><b>19A: C</b> (4.NF.3)</p>	<p><b>19B:</b> Key: <math>1\frac{2}{8}</math></p>

DCAS-Like Answer	Next-Generation Solution
<p><b>20A: A</b> (4.NF.4)</p>	<p><b>20B:</b> <i>Solution:</i> The correct answer to the first part of the item could be arrived at by multiplying the number of acres needed for one house by the number of houses that will be built: <math>\frac{5}{6} \times 7 = \frac{35}{6} = 5\frac{5}{6}</math> acres. Another approach could be repeated addition. The number of acres needed for seven houses could also be achieved by adding <math>\frac{5}{6}</math> seven times: <math>\frac{5}{6} + \frac{5}{6} + \frac{5}{6} + \frac{5}{6} + \frac{5}{6} + \frac{5}{6} + \frac{5}{6} = \frac{35}{6} = 5\frac{5}{6}</math>. After finding the amount of land needed for seven houses, the student would subtract this amount from 10. The student may convert the whole number 10 to a mixed number with a denominator of 6: <math>9\frac{6}{6} - 5\frac{5}{6} = 4\frac{1}{6}</math>. A student could also use a visual fraction model to compare <math>5\frac{5}{6}</math> with 10:</p>
