iePoint > 2011 Release

Harrisburg Project is releasing **iePoint > 2011** to clients this week. The installation will work differently than in years past. We will NOT be sending a CD in the mail this year. Instead you should look for an email from Harrisburg Project informing you that your site is ready to proceed with the installation. We are requesting that you execute the installation process on the same day you receive the email. We have staggered the dates of the installation to help our client support team to better cater to any needs you may have.

There is no need for a tech to perform the installation. If your computer currently is running **iePoint >**, you should continue through the installation process. The installation for **iePoint > 2011** MUST be completed by an **iePoint >** Manager. The SAME **iePoint >** Manager who starts the installation process must complete the installation process.

Please make sure that your site has a current backup of your data. This is always recommended when carrying out this type of process. Due to the nature of the installation, this process could possibly take a while to complete. This will depend on your internet connection and your database size.

We have provided an 'Installation How To' document for you to follow while progressing through the installation. It is highly recommended that you review this guide prior to beginning the installation process.

[Installation How To](#)

To view the modifications that have been made in **iePoint > 2011**, visit our website, www.hbug.k12.il.us -> Training & Help -> Current Versions and Revisions History, or click the link below to navigate there directly.
