State Systemic Improvement Plan – Questions and Answers

This document is based on questions posed by State staff after OSEP presented on RDA and the SSIP at various meetings or conferences across regions.

QUESTION	RESPONSE
	General
Why are States being required to develop a State Systemic Improvement Plan (SSIP)?	The U.S. Department of Education is implementing a revised accountability system under the Individuals with Disabilities Education Act (IDEA). Results-Driven Accountability (RDA) shifts the Department's accountability efforts from a primary emphasis on compliance to a framework that focuses on improved results for children with disabilities, while continuing to ensure States meet IDEA requirements. RDA emphasizes improving child outcomes such as performance on assessments, graduation rates, and early childhood outcomes. To support this effort, States are being required to develop a State Systemic Improvement Plan (SSIP) as part of their State Performance Plan/Annual Performance Report (SPP/APR). In developing, implementing, and evaluating the SSIP, we expect that a State's focus on results will drive innovation in the use of evidence-based practices in the delivery of services to children with disabilities, which will lead to improved results for children with disabilities.
	Stakeholder Engagement
What is expected in terms of stakeholder engagement? Who? To what extent?	It is expected that stakeholders will be meaningfully involved in every phase of the SSIP, including development, implementation, and evaluation. The State needs to determine which stakeholder perspectives are needed for the development, implementation, and evaluation of the SSIP, and whether the stakeholders would change according to the task. At a minimum, we would expect to see representatives from local educational agencies (LEAs) and the State Advisory Panel for the IDEA Part B SSIP, and early intervention service (EIS) programs and providers and the State Interagency Coordinating Council (SICC) for the IDEA Part C SSIP. We would also expect to see representatives of: parents of children with disabilities, parent advocacy groups, and other State and local agencies that pay for, provide, or collaborate on IDEA services and issues.

QUESTION	RESPONSE
	Finally the State should include stakeholders with expertise on the issues to be
	discussed for both the IDEA Part B and C SSIPs. Within each phase, stakeholder
	involvement will be valuable.
Stat	te Identified Measurable Result (SIMR)
How will States know if their identified	The SSIP is an indicator in the FFYs 2013 through 2018 SPP/APR. States must
measurable result is acceptable? Is there a	submit by February 2, 2015 their SPP/APR for both Part B and Part C and submit
mechanism for some type of "approval" prior to submission of Phase I in April 2015? For	by April 1, 2015 Phase I of the SSIP, which is Indicator C-11 and B-17 of the SPP/APR.
example, is there a way for States to	
determine the acceptability of their SSIP	OSEP is providing targeted support to States through SSIP Implementation
throughout the process?	Support visits and conference calls, during which States' proposed SIMR can be
	discussed. States will also have the ability to submit draft Phase I SSIPs for OSEP to review, prior to the official April 1, 2015 submission date. In addition, OSEP
	has developed and shared with States an Evaluation Tool which includes criteria
	for reviewing Phase I SSIPs. We will work with each State through these
	mechanisms to ensure that the State has an appropriate SIMR before the April
	2015 submission date.
What is included in the SIMR?	In the FFY 2013 SPP/APR, States must provide, as part of Phase I of the SSIP, a
What is moraded in the silving	statement of the result(s) the State intends to achieve through implementation
	of the SSIP, which is referred to as the SIMR for Children with Disabilities, and
	include the following additional information to meet the requirements in IDEA
	section 616(b)(1)(A) and (b)(2)(A). States must provide FFY 2013 baseline data
	for Indicators C-11 or B-17 (the SSIP) that must be expressed as a percentage and
	aligned with the SIMR. The State must establish "measurable and rigorous"
	targets for each successive year of the SPP (FFYs 2014 through 2018). The end
	target (for FFY 2018) must demonstrate improvement over the FFY 2013 baseline
	data. The State must submit all other components of Phase I of the SSIP. If the
	State selects a SIMR that focuses on improving a result for a subset of
	districts/programs or populations, then the State must include in the SIMR
	section of Phase I of its SSIP an explanation of why improving that result for that

QUESTION	RESPONSE
	subset of districts/programs or population would improve that result on a
	Statewide basis.
What is meant by child results or outcomes in Indicators C-11 and B- 17?	In Indicators C-11 and B-17 of the 2015 SPP/APR package, child outcomes are discussed in the context of the SIMR, which must be clearly based on the Data
	and State Infrastructure Analyses and must be a child-level outcome in contrast
	to a process outcome. The State may select a single result (e.g., increasing the
	graduation rate for students with disabilities), or a cluster of results that improve child outcomes.
Are there results indicators that would not be considered appropriate child-level outcomes? If so, will OSEP provide guidance or a list to help guide States toward an appropriate/acceptable measurable results area?	Yes. As discussed above, the SIMR must be a child-level, measurable result that improves child outcomes. The "compliance indicators" measure compliance but do not measure child outcomes. This includes the compliance indicators under Part C (1, 7 and 8) and Part B (9, 10, 11, 12, and 13). In addition, there are some "results indicators" that are not appropriate to use as a SIMR, since they do not measure improvement in child outcomes.
	Topics that would <u>not</u> be acceptable, stand-alone SIMRs include those related to the following results indicators:
	For Part C:
	Indicator 2 – natural environments
	Indicators 5 and 6 – child find
	Indicators 9 and 10 – resolution sessions and mediation.
	For Part B:
	Indicator 2 – dropout
	Indicator 4 – suspension/expulsion
	Indicators 5 and 6 – LRE
	Indicator 8 – parent involvement
	Indicators 15 and 16 - resolution sessions and mediation.

QUESTION	RESPONSE
	The most common SIMRs address child-specific results such as graduation rates
	(B-1), performance on assessments (B-3), and early childhood outcomes (C-3).
Can a State use a six year graduation cohort	If a State is planning to use a six year graduation cohort rate for its SIMR when
rate since we think this is more realistic for	that is not the data it is reporting under Indicator B-1, the State should discuss

political structure in that State changes and	

QUESTION	RESPONSE
new initiatives are being emphasized. In this case could a State change its SIMR?	
	SSIP baseline and targets
Do targets have to be agreed upon by stakeholders or can they provide input and States make the final decision? Can targets for the SSIP be different than for one of the indicators? For example, my State has chosen improving the graduation rate statewide as our focus. The measurement table for B-1 has said that the target must be the same as the ESEA Target. If we focus on graduation for the SSIP, does our target for B-17 need to be the same as for B-1 and for ESEA?	OSEP expects that stakeholders will be involved in the development of all three phases of the SSIP. Ultimately the selection of the SIMR and target setting is an SEA or Lead Agency decision. The SIMR must be aligned with an SPP/APR indicator or a component of an SPP/APR indicator. The SIMR must be clearly based on the Data and State Infrastructure Analyses and must be a child-level outcome in contrast to a compliance or process outcome. The State may select a single result (e.g. graduation rate) or a cluster of related results (e.g., increasing the graduation rate and decreasing the dropout rate). If the SIMR is the same as an indicator, or indicator component, then the baseline data and targets for the SSIP must be aligned with, and therefore generally the same as, the baseline data and targets of the SPP/APR indicator or component of the indicator to which the SIMR is aligned. If the SIMR is the same as an indicator, or indicator component, and the State is planning to use different baseline data or targets, the State should discuss its SIMR with its OSEP State contact.
Can the State establish different baseline/targets for specific districts/programs or populations if its SIMR focuses on a specific subgroup?	For Indicators B-17 and C-11, the State must provide baseline data for FFY 2013 and annual target(s) for each of the SPP/APR reporting periods from FFYs 2014 through 2018. A State may choose to focus on a subset of districts/programs or populations as its SIMR in which case, its SSIP FFY 2013 baseline data will be different from the Statewide baseline data of the comparable indicator in the SPP/APR and its targets will also likely be different from the Statewide targets for the comparable indicator in the SPP/APR. In that case, the State's SSIP baseline data and targets must be aligned with the SIMR, but will not be based on Statewide data. If the State selects a SIMR that focuses on improving a result for a subset of districts/programs or populations, then the State must include in the SIMR section of Phase I of its SSIP an explanation of why improving that result for that subset of districts/programs or population would improve that result on a

QUESTION	RESPONSE
	Statewide basis.
	For example, a State may choose to improve the graduation rate for a
	subpopulation of students. In that case, a State must provide FFY 2013 baseline
	data on the graduation rate of that subpopulation and establish targets for that
	subpopulation for Indicator B-17 for each of the SPP/APR reporting periods from
	FFYs 2014 through 2018. The State must explain how improving the graduation
	rate for that subpopulation will improve the Statewide graduation rate for
	children with disabilities.
In order to identify an area of focus, we need	If a State is committed to a particular result area, it can establish its FFY 2013

	required to report on local-level performance on the SSIP.
Where in the SSIP does a State describe how	As noted in Indicators C-11 and B-17, the State must describe how it will address
they will address data quality?	data quality in the Data Analysis section of Phase I of the SSIP. If the State
	identifies any concerns about data quality, the description must include how it
	will address these concerns, and if additional data are needed, what methods
	and timelines will be applied to collect and analyze those additional data.
	ion of Coherent Improvement Strategies
Is OSEP willing to accept "recommended	OSEP is looking for coherent improvement strategies that are based on the best
practices" as strategies?	available research, aligned to data analysis and the infrastructure analysis, and
	support systemic change. The State should provide the evidence they used to
	make decisions on appropriate improvement strategies to improve the SIMR.
Will a State need to cite the literature to	A State will need to provide evidence on why they chose specific improvement
support the practice(s) chosen as their	strategies and why they think that implementation of those strategies will lead to
strategy?	improvements in the SIMR. A State may, but is not required to, cite literature
	that supports the practice(s) chosen as their strategy.
Can the State initially work with one cohort of	Yes. The State may choose to work with a cohort of districts or programs during
districts/programs when implementing the	the first year of implementation of evidence-based practices and scale up
evidence-based practices with plans to scale	implementation over the life of the SSIP. This is consistent with what we know
up over the life of the SSIP?	about implementation science. However, when deciding on the number of
	districts/programs with which to work, the State should consider how many
	districts/programs are needed to have a positive impact on Statewide data.
Do States have to scale up implementation of	States do not have to scale up evidence-based practices Statewide by the final
evidence-based practices on a Statewide level	year of the SSIP, although it is expected that implementation of those evidence-
by the final year of the SSIP?	based practices in the SSIP will ultimately impact Statewide data.
If measuring results around a subpopulation,	The expectation is that full implementation of the SSIP will result in improvement
then the activities must be based on moving	of State data over time. States can focus on a subgroup (such as specific
the numbers for that subpopulation. Must the	districts/programs or populations) and implement evidence-based practices to
activities be applicable to other populations	improve performance in the subgroup. It is expected that the State would make
and be scalable?	needed modifications to its improvement strategies to address other populations

QUESTION	RESPONSE
	as it scales up the initiative.
Is the expectation for Phase I of the SSIP to include a "detailed and coherent proposal of improvement activities" or just an outline of improvement activities? What criteria will be used for measuring improvement activities and the quality of the activities? We have not historically received feedback on this in the past.	Coherent improvement strategies are envisioned as the broad strategies that will address root causes for low performance and build local capacity to achieve the SIMR. States will be asked to provide more detailed improvement activities, timelines, resources and assign responsibilities in Phase II of the SSIP. OSEP has drafted a Phase I SSIP Evaluation Tool which includes criteria for evaluating the quality of each Phase I components as well as the entire Phase I SSIP.
Previous information from OSEP indicated that the SSIP would include improvement activities for all indicators and address general supervision. Is this the case?	In developing, implementing, and evaluating the SSIP, the State is selecting a SIMR that will lead to improved results Statewide for children with disabilities. The SPP/APR for FFYs 2013 through 2018 was revised to no longer require reporting of separate improvement activities for all indicators and also removed the reporting requirement in former SPP/APR Indicator C-9/B-15 regarding the correction of noncompliance. Within the compliance indicators of the SPP/APR, States must continue to report on correction of noncompliance for those compliance indicators. Although States will need to complete the necessary improvement activities to improve performance of those indicators, they are not required to submit those improvement activities as a part of the SPP/APR.
	Theory of Action
Is it appropriate to incorporate only the SIMR into the theory of action, e.g. improving the performance of children with disabilities on 3 rd grade reading assessments is the outcome, or do we need to also incorporate other longer term results, e.g. graduation rate, post-school outcomes, grade 10 reading assessments into the theory of action?	It is permissible to include only the SIMR in the Theory of Action. The Theory of Action should be an "If-Then" statement, graphically portrayed in the State's SSIP, that shows the rationale of how implementing the coherent set of improvement strategies selected will increase the State's capacity to lead meaningful change in LEAs or EIS programs, and achieve improvement in the SIMR for children with disabilities.
Is there going to be a prescribed form for the Theory of Action? Will it be part of the	There will not be a prescribed form for the theory of action. GRADS 360 will allow States to upload their Theory of Action graphic. States may want to use
