## Periodic Trends Practice Worksheet

1. What is the difference between electronegativity and ionization energy?

2. Why does fluorine have a higher ionization energy than iodine?

Fluorine is a smaller atom and the electrons are more attracted to the nucleus and it takes more energy to remove them.

3. Why do elements in the same family generally have similar properties?

Same # of valence electrons

4. Which is the largest atom in Group 4a (14)? Pb

5. Which is the smallest atom in Group 7a (17)? F

6. Which is the smallest atom in period 5? Xe

7. Rank the following elements by increasing atomic radius: carbon, aluminum, oxygen, potassium.

K < Al < C < O

8. Rank the following elements by increasing electronegativity: sulfur, oxygen, neon, aluminum.

Ne < Al < S < O

9. Arrange the following atoms in order of decreasing atomic radius. Na Al P Cl Mg

Na > Mg > Al > P > Cl

10. For each of the following pairs, circle the element that is larger? lost fewer e<sup>-</sup>

a) N<sup>3-</sup> or F<sup>-</sup>

Al > Si > C > F

c) Na, Mg, Ar, P

Na > Mg > P > Ar

d) I<sup>-</sup>, Ba<sup>2+</sup>, Cs<sup>+1</sup>, F<sup>-</sup>
