1.0 Preface

The Delaware Department of Education (DOE) produces a summary report of educational employees for use by the department and other state agencies. This summary draws data from the state personnel and financial systems to summarize the number of employees by position and that position's average salary. Assigned work location, employee demographics, and budget sources of salaries are all needed to complete this report.

The report is only as accurate as the information each school district enters into the state PHRST and DFMS computer databases. Fields that are very important to the usefulness of the report are:

- Employee's race for EEO reporting
- Employee's years of experience in present position
- Employee's highest academic degree
- Employee's birth date to project possible retirement
- Employee's job code to determine present position
- Employee's job location for grouping by school district and school
- Number of hours per week worked in a given position (Employees with multiple positions should normally have hours totally 37.5 hours per week)

The report is created from data provided to DOE during October and November of each year. Trial runs are made to uncover unusual data patterns and inform the responsible school district of possible errors. The Department of Education requests the assistance and cooperation of each school district in keeping the Personnel and Payroll databases as accurate as possible.

2.0 How to Use These Tables

Narrow your search by finding the personnel category in this section of the document. Then find that area on the complete code table to determine the Job Code. Use only the codes from the code table. DO NOT make up your own code. If you need to define a new position, please call Cheryl Welch at DOE, 302-735-4040, or email Adrian Peoples at DOE, apeoples@doe.k12.de.us.

Many of these positions are coordinated with Delaware's Teacher Certification Program and must match in order to determine those who meet the federal government's definition of "highly qualified."

3.0 The Personnel Position Code Decoded

3.1 *The First Digit*

The first digit of the personnel position code, known in the PHRST system as the Job Code (or P-Code), denotes the general level or area of support. Listed below are the current definitions for the first digit of the personnel position code.

Personnel Position Code: First Digit

9	Pupil Support

3.2 The Second and Third Digits

The second and third digits of the personnel position code define the area of study or administration and are related to the first digit. Only the digit combinations shown are allowed.

3.3 Job Code Table

The following is a complete list of allowable Job Codes, used in the PHRST system. In the PHRST system, these codes must be preceded by the letter “P” (thus the nickname P-Code). If a school district cannot find a code that fits an employee’s duties or job description, that district must request a code from the Department of Education. Please start this process by emailing Adrian Peoples at apeoples@doe.k12.de.us.

Codes that end in 99 were used to signify an “other” category within a group. The PHRST system does not operate efficiently using these codes. They are no longer usable and the districts will be asked to correct them, if found in the database.
