

**Physical Science Final Exam Project**  
**Due on the date of your final exam**

Each chapter of your physical science text includes a “How it Works” section and a “Concepts in Action” section that ties the material to real world applications.

We will not be working in groups or pairs to complete this project. Each of you will complete each aspect of this project.

You will be given all the remaining time in class to work on this project. Use this time wisely and productively! If you start to fall behind, it is very important that you put in some time outside of class to complete this activity.

You will create a poster that illustrates and explains **three** “How it Works” and **two** “Concepts in Action.” On the back of the poster, you must include a quiz on your topic. When you turn in your project, you must submit an answer sheet to accompany the quiz.

You will put together a 2-3 minute oral presentation on your topic that will be presented during the Final exam time slot for your class. The scoring rubric is listed below. This is your grade will be recorded as a test.

Category	Maximum # points	# points scored
Organization	1	
Poster	5	
Quiz	1	
Presentation	3
