

Place Value Targets

Create an equation to subtract multi-digit numbers to get as close to the target number as possible.

Think about the target number.

Select numbers to fill in the blanks and create an expression.

Each digit can only be used once per round.

Find the difference using a strategy you learned and add a green sticky note with your difference.

The player closest to the target number wins that round.

I will tell you the winners tomorrow!

Round 1:
Target Number 100

<div></div>	<div></div>	<div></div>	—	<div></div>	<div></div>	<div></div>
