

CHAPTER 1

Addition and Subtraction Within 1,00

Lesson 1.8 Estimate Differences

In this lesson we learned 2 ways to estimate.

1. Use Compatible Numbers. Remember Compatible numbers are numbers that easier to compute and are close to the exact amount.

Ex:
$$\begin{array}{r} 436 \\ -387 \\ \hline \end{array} \quad \rightarrow \quad \begin{array}{r} 440 \\ -390 \\ \hline 50 \end{array}$$

So the difference is about 50.

2. Use Place Value to Round Remember the students can choose what place to round to.

Ex:
$$\begin{array}{r} 761 \\ -528 \\ \hline \end{array} \quad \begin{array}{r} 760 \\ -530 \\ \hline 230 \end{array}$$

So the difference is about 230.
