

In the first half of the unit, the adaptation focuses on building students' understanding of addition and subtraction strategies based on place value and properties of operations. This work equips students with strategies that will allow them to build fluency with addition and subtraction within 20.

In the second half, the adaptation focuses on different ways data can be organized, as well as Compare story problems and different ways they can be represented. This work prepares students for working with new data representations including picture and bar graphs, as well as using tape diagrams to represent Compare problems.
