

The adaptation focuses on building students' understanding of ten as a unit, that two-digit numbers are made of tens and ones, and that two-digit numbers can be represented in different ways, particularly with different amounts of tens and ones.

This work prepares students to add and subtract within 100 by composing and decomposing units of ten in this unit. It also prepares them to use the relationship between addition and subtraction as well as the properties of operations to help add and subtract.
