

Lesson 17: Use the Four Operations to Solve Problems

Cool Down: Andre's Balloons

Andre has 125 balloons. He and 4 friends hung up some balloons for a party at school and now there are 80 balloons left. If each person hung up the same number of balloons, how many balloons did each person hang up?

1. Write an equation with a letter for the unknown quantity to represent the situation.
2. Solve the problem. Explain or show your reasoning.
