Habitats

A **habitat** is all the living and non-living things in an area. All around the world there are many different kinds of habitats. Plants and animals live in habitats that have the things they need to survive.

The rainforest and desert are both different types of habitats. **Rainforests** are wet, warm habitats that are crowded with plants and animals. They get a lot of rain. **Deserts** are dry habitats that get very little rain. They can be very hot and/or very cold and have more open space than a rainforest. Because these habitats are so different, the plants and animals that live in them are different.

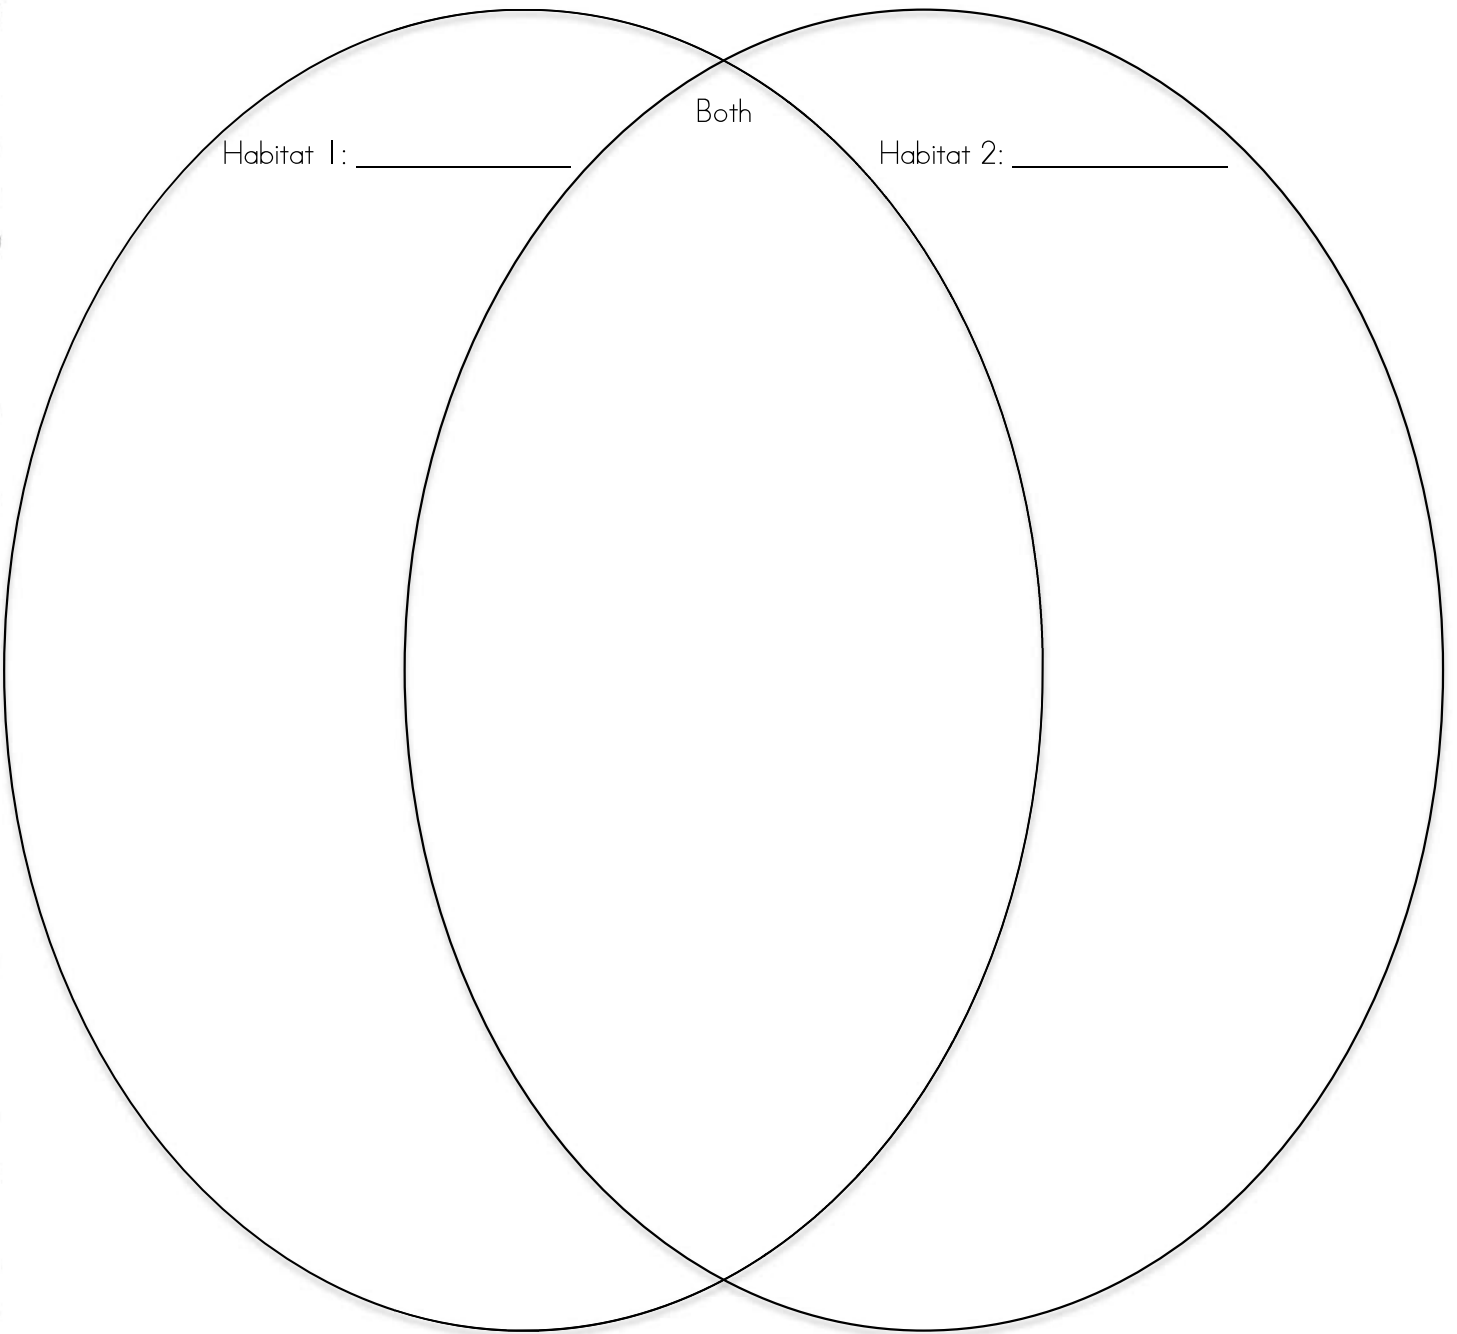

Tropical Rainforest

Hot Desert
