6th Grade

SUBJECT SPOTLIGHT:

Mathematics:

Math students are working through Reveal Math in Module 5 Numeric and Algebraic Expressions. Advanced math students are working on Module 5 Simplifying Algebraic Expressions. The second i-Ready Math Diagnostic test will be in January for all 6th grade math students.

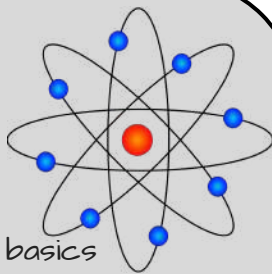

Social Studies:

In Social Studies, 6th graders have learned about Geography and map skills throughout Chapter 1. We will begin learning about Physical and Human Geography in Chapter 2. Students will learn about the Earth's composition and how it is continually changing, what shapes the Earth's environments, and how geography influences cultures around the world as we continue our learning in Unit 1: The Essentials of Geography.

Science:

With the new year, we will be entering into our Introduction to the basics of chemistry. As a class, we will be exploring the periodic table and how base elements create the world we live in. We will also break down items into the most basic atomic structure and analyze how these tiny units characterize our bodies and life around us.

ELA:

Unit 3 offers a mixture of texts, both fiction and informational, about people that face uncertainty. After reading the stories and informational texts about individuals and characters that take action in the face of uncertainty, students will have the opportunity to write an informative essay. In their essays, students will identify three individuals or characters from the unit texts and explore their motivations. As always, students should be reading at least 20 minutes every night.
