

Plumbum

Facts

Pb is lead's chemical symbol. Lead's atomic number is 82 and its density is 11.34 g/cm³. It is a solid. Lead's boiling point is 3164°F and its melting point is 621.5°F.

ABILITIES

Poison to the touch. is strong/tough. Is able to create batteries and connect wires and is able to be erosion resistant. Lead can shield radiation and withstand high heat.

USES

Lead can be used for solder (connecting wires) and can also be used by shielding against radiation and is used as the shell of batteries.

HISTORY

Lead also known as plumbum was the oldest known metal. Lead was discovered in ancient Roman times.

Lead's color is bluish. Its crystal structure is cubic and it is a metal and is smooth.

SUPER ABILITIES

My super villain is able to destroy walls/roofs and can fight super heroes with his partner named Hermes. Together they can't be beat. Since I can create batteries and Hermes is mercury he can hide in my shells of batteries he can sneak into a super hero hideout. My villain is a metal but is resistant to erosion and rust. Lead's disabilities include, bad conductor and bad heat conductor.
