# Angel Tree Spreadsheet Activity

You have been given $600 to purchase Angel Tree gifts for five needy children. The children's names and ages are listed below along with their gift wish list. All children have listed four things that they want for Christmas. The items listed first are what they want the most. You may not have enough money to get them all of their requests, but do your best. You are to shop online for their gift requests and include a picture of the item along with the price (use the print screen to display the items).

- Sarah, age 8: Barbie doll stuff, Easy Bake Oven, Jewelry making kit, bike
- Andy, age 10: Scooter, Sneakers, Bronco's Jersey or Hoodie, Lego set
- Dexter, age 12: Skateboard, MP3 player, Winter Coat, Night Vision Goggles
- Cindy, age 6: Indoor play tent, snow boots, anything Disney Princess, Art set
- Malia, age 11: Leapfrog, Art Easel, Shrinky Dinks maker, Silly stocking hat

Determine the best way to display the information in a **Spreadsheet** that includes the following (use formulas):

- Totals the cost of each child's toys.
- Add 6.5% sales tax to each child's total.
- Includes pictures and prices of all toys
- Average spent on each child
- Grand Total spent (must not exceed $600)
- A column or bar chart that shows amount spent on each child
- Eye appealing formatting (include borders, colors, font size, title with merged cells, etc.)

**Share/Email/AirDrop the spreadsheet as "YourNameAngelTreeSpreadsheet"**
