

AP Calculus AB Exam Prep

The AP Calculus AB Exam Prep course was designed for students to quickly and efficiently review many concepts typically covered on the AP Calculus AB Exam. After being shown step-by-step how to solve several carefully selected exam-like problems on a particular topic, students are given similar problems to cement their understanding. Two videos are provided for each lesson, giving students a "fast track" option as well as additional, more detailed instruction.

Course topics include:

- Consists of short, concise lessons
- Presents problems modeled after those given in previous AP Calculus AB Exams
- Provides many different types of problems, some requiring an analytical (algebraic) approach, others requiring numerical analysis or a graphical solution
- Covers both multiple choice and free-response types of problems
- Incorporates both calculator active and non-calculator active types of problems
- Provides helpful strategies to be used when taking the AP Calculus AB Exam
- Includes information on exam grading
- Contains suggestions on how to make final preparations prior to taking the exam
- Gives students extra confidence going into the exam
