

## Chapter 1: Exploring Data

### Key Vocabulary:

- |                             |               |                       |
|-----------------------------|---------------|-----------------------|
| ▪ individual                | ▪ stemplot    | ▪ IQR                 |
| ▪ variable                  | ▪ histogram   | ▪ five-number summary |
| ▪ frequency table           | ▪ SOCS        | ▪ minimum             |
| ▪ relative frequency table  | ▪ outlier     | ▪ maximum             |
| ▪ distribution              | ▪ symmetric   | ▪ boxplot             |
| ▪ pie chart                 | ▪ $\Sigma$    | ▪ resistant           |
| ▪ bar graph                 | ▪ $\bar{x}$   | ▪ standard deviation  |
| ▪ two-way table             | ▪ spread      | ▪ variance            |
| ▪ marginal distributions    | ▪ variability |                       |
| ▪ conditional distributions | ▪ median      |                       |
| ▪ side-by-side bar graph    | ▪ quartiles   |                       |
| ▪ association               | ▪ $Q_1, Q_3$  |                       |
| ▪ dotplot                   |               |                       |

### **Data Analysis: Making Sense of Data (pp.2-6)**

1. *Individuals* are...
2. A *variable* is ...
3. When you first meet a new data set, ask yourself:
  - Who...
  - What...
  - Why, When, Where and How...
4. Explain the difference between a *categorical* variable and a *quantitative* variable. Give an example of each.
5. Give an example of a categorical variable that has number values.
6. Define *distribution*:
7. What are the four steps to *exploring data*?
  - Begin by....
  - Study relationships...
  - Start with a ...
  - Then add...
8. Answer the two questions for the *Check Your Understanding* on page 5:
9. Define *inference*.

## **1.1 Analyzing Categorical Data (pp.8-22)**

1. A *frequency table* displays...
  2. A *relative frequency table* displays...
  3. What type of data are *pie charts* and *bar graphs* used for?
  4. *Categories* in a bar graph are represented by \_\_\_\_\_ and the *bar heights* give the category \_\_\_\_\_.
  5. What is a *two-way table*?
  6. Define *marginal distribution*.
  7. What are the two steps in examining a marginal distribution?
- 
8. Answer the two questions for the *Check Your Understanding* on page 14.
  9. What is a *conditional distribution*? Give an example demonstrating how to calculate one set of conditional distributions in a two-way table.

10. What is the purpose of using a *segmented bar graph*?
11. Answer question one for the *Check Your Understanding* on page 17.
12. Describe the four steps to organizing a statistical problem:
  - State...
  - Plan...
  - Do...
  - Conclude...
13. Explain what it meant by an *association* between two variables.

## **1.2 Analyzing Categorical Data (pp.27-42)**

1. What is a *dotplot*? Draw an example.
2. When examining a distribution, you can describe the overall pattern by its  
**S**\_\_\_\_\_ **O**\_\_\_\_\_ **C**\_\_\_\_\_ **S**\_\_\_\_\_
3. If a distribution is *symmetric*, what does it look like?
4. If a distribution is *skewed to the right*, what does it look like?
5. If a distribution is *skewed to the left*, what does it look like?
6. Describe and illustrate the following distributions:

- a. Unimodal
  - b. Bimodal
  - c. Multimodal
7. Answer questions 1-4 for the *Check Your Understanding* on page 31.
8. How are a *stemplot* and a *histogram* similar?
9. When is it beneficial to *split the stems* on a stemplot?
10. When is it best to use a *back-to-back stemplot*?
11. List the three steps involved in making a histogram.
12. Why is it advantageous to use a relative frequency histogram instead of a frequency histogram?

13. Answer questions 2-4 for the *Check Your Understanding* on page 35.

### **1.3 Analyzing Categorical Data (pp.50-67)**

1. What is the most common *measure of center*?
2. Explain how to calculate the *mean*,  $\bar{x}$ .
3. What is the meaning of  $\Sigma$ ?
4. Explain the difference between  $\bar{x}$  and  $\mu$ .
5. Define *resistant measure*.
6. Explain why the mean is not a resistant measure of center.
7. What is the *median* of a distribution? Explain how to find it.
8. Explain why the median is a resistant measure of center?
9. How does the shape of the distribution affect the mean and median?

10. What is the *range*?
11. Is the range a resistant measure of spread? Explain.
12. How do you find *first quartile*  $Q_1$  and *third quartile*  $Q_3$ ?
13. What is the *Interquartile Range* (IQR)?
14. Is the IQR and the quartiles a resistant measure of spread? Explain.
15. How is the IQR used to identify *outliers*?
16. What is the *five-number summary* of a distribution?
17. Explain how to use the five-number summary to make a *boxplot*.
18. What does the *standard deviation* measure? How do we calculate it?
19. What is the relationship between *variance* and *standard deviation*?
20. What are the *properties* of the standard deviation as explained on page 64?
21. How should one go about choosing measures of center and spread?
