

AP-C PHYSICS SUMMER ASSIGNMENT

Future AP-C Physics Students,

Here is your much-anticipated summer assignment. The purpose of this assignment is not to punish you for signing up for the course, but to help refresh your memory of some basic physics principles and get a jump-start on our upcoming challenge.

I don't recommend waiting until September to begin the assignment. Some problems will require a substantial amount of effort to complete. Do not stress if you have some trouble. You will not be graded on whether you are correct or not – rather that you made a concerted effort. Be sure to complete the assignment for the first day of classes. **This assignment will NOT be accepted late.**

Enjoy your summer!!!

Sincerely,
Mr. Hardy

Complete the reading and do the assigned problems from chapters one and three (not two) in your textbook. The problems are to be done on separate white lined paper. The reading and problems are attached.
