

PRO or CON (circle one)

In your small group of like-minded individuals, you will need to EACH have ONE thing to say during the discussion.

Using your RESEARCH document from yesterday, pick a few points that support your opinion to discuss with your small group. Decide which are the most important and compelling facts and ideas, and assign one to each group member to share during the full discussion. Don't worry if another small group shares your opinion and also finds and shares the same fact before you get a chance to; you can still share your thoughts to get your points.

Name:	What they will contribute to the discussion:
Avery	The waste from nuclear energy is extremely dangerous and it has to be carefully watched over for several thousand of years.
Olivia	Developing countries can rarely afford to use nuclear energy because it's such a costly source of alternative energy.
Saveyon	Nuclear energy produces radioactive energy. A major environmental concern related to nuclear power is the creation of radioactive wastes such as uranium mill tailings.
Cj	One peculiar feature of the RBMK design was that coolant failure could lead to a strong increase in power output from the fission process.
Caleb	Radiation is known to cause cancer in humans, Radiation can also cause other adverse health effects

Now that THAT is worked out, use this group time to practice saying out loud to a small group what you will need to say later during the whole group discussion; ask for help with pronunciation; and ask any clarifying questions you may have.
